Chapter 1 MySQL Error Reference

This document provides a reference for the various types of error messages in MySQL:

- Error messages produced only by the server: Chapter 2, Server Error Message Reference
  
  On the server side, error messages may occur during the startup and shutdown processes, as a result of issues that occur during SQL statement execution, and so forth.

  - The MySQL server writes some error messages to its error log. These indicate issues of interest to database administrators or that require DBA action.
  
  - The server sends other error messages to client programs. These indicate issues pertaining only to a particular client. The MySQL client library takes errors received from the server and makes them available to the host client program.

- Error messages that originate only from within the MySQL client library: Chapter 3, Client Error Message Reference
  
  Client-side error messages are generated from within the MySQL client library, usually involving problems communicating with the server.

- Error messages that are shared between the server and the client library: Chapter 4, Global Error Message Reference
  
  Some “global” error messages are shared in the sense that they can be produced by the MySQL server or by MySQL client programs.

For a description of the types of error information MySQL provides and how to obtain information about them, see Error Messages and Common Problems, in MySQL 5.7 Reference Manual.
Chapter 2 Server Error Message Reference

The MySQL server writes some error messages to its error log, and sends others to client programs.

Example server-side error messages written to the error log:

- 2018-09-26T14:46:06.326016Z 0 [Note] Skipping generation of SSL certificates as options related to SSL are specified.

Example server-side error message sent to client programs, as displayed by the mysql client:

```
mysql> SELECT * FROM no_such_table;
ERROR 1146 (42S02): Table 'test.no_such_table' doesn't exist
```

Each server error message includes an error code, SQLSTATE value, and message string, as described in Error Message Sources and Elements. These elements are available as described in Error Information Interfaces.

In addition to the errors in the following list, the server can also produce error messages that have error codes in the range from 1 to 999. See Chapter 4, Global Error Message Reference

- Error number: 1000; Symbol: ER_HASHCHK; SQLSTATE: HY000
  Message: hashchk
  Unused.

- Error number: 1001; Symbol: ER_NISAMCHK; SQLSTATE: HY000
  Message: isamchk
  Unused.

- Error number: 1002; Symbol: ER_NO; SQLSTATE: HY000
  Message: NO
  Used in the construction of other messages.

- Error number: 1003; Symbol: ER_YES; SQLSTATE: HY000
  Message: YES
  Used in the construction of other messages.

  Extended EXPLAIN format generates Note messages. ER_YES is used in the Code column for these messages in subsequent SHOW WARNINGS output.

- Error number: 1004; Symbol: ER_CANT_CREATE_FILE; SQLSTATE: HY000
  Message: Can't create file ’%s’ (errno: %d - %s)
  Occurs for failure to create or copy a file needed for some operation.
  Possible causes: Permissions problem for source file; destination file already exists but is not writeable.

- Error number: 1005; Symbol: ER_CANT_CREATE_TABLE; SQLSTATE: HY000
Message: Can't create table '%s' (errno: %d)

**InnoDB** reports this error when a table cannot be created. If the error message refers to error 150, table creation failed because a **foreign key constraint** was not correctly formed. If the error message refers to error -1, table creation probably failed because the table includes a column name that matched the name of an internal **InnoDB** table.

- **Error number:** 1006; **Symbol:** ER_CANT_CREATE_DB; **SQLSTATE:** HY000
  Message: Can't create database '%s' (errno: %d)

- **Error number:** 1007; **Symbol:** ER_DB_CREATE_EXISTS; **SQLSTATE:** HY000
  Message: Can't create database '%s'; database exists

  An attempt to create a database failed because the database already exists.

  Drop the database first if you really want to replace an existing database, or add an **IF NOT EXISTS** clause to the **CREATE DATABASE** statement if to retain an existing database without having the statement produce an error.

- **Error number:** 1008; **Symbol:** ER_DB_DROP_EXISTS; **SQLSTATE:** HY000
  Message: Can't drop database '%s'; database doesn't exist

- **Error number:** 1009; **Symbol:** ER_DB_DROP_DELETE; **SQLSTATE:** HY000
  Message: Error dropping database (can't delete '%s', errno: %d)

- **Error number:** 1010; **Symbol:** ER_DB_DROP_RMDIR; **SQLSTATE:** HY000
  Message: Error dropping database (can't rmdir '%s', errno: %d)

- **Error number:** 1011; **Symbol:** ER_CANT_DELETE_FILE; **SQLSTATE:** HY000
  Message: Error on delete of '%s' (errno: %d - %s)

- **Error number:** 1012; **Symbol:** ER_CANT_FIND_SYSTEM_REC; **SQLSTATE:** HY000
  Message: Can't read record in system table

  Returned by **InnoDB** for attempts to access **InnoDB** INFORMATION_SCHEMA tables when **InnoDB** is unavailable.

- **Error number:** 1013; **Symbol:** ER_CANT_GET_STAT; **SQLSTATE:** HY000
  Message: Can't get status of '%s' (errno: %d - %s)

- **Error number:** 1014; **Symbol:** ER_CANT_GET_WD; **SQLSTATE:** HY000
  Message: Can't get working directory (errno: %d - %s)

  Message: Can't lock file (errno: %d - %s)

- **Error number:** 1016; **Symbol:** ER_CANT_OPEN_FILE; **SQLSTATE:** HY000
  Message: Can't open file: '%s' (errno: %d - %s)
InnoDB reports this error when the table from the InnoDB data files cannot be found, even though the .frm file for the table exists. See Troubleshooting InnoDB Data Dictionary Operations.

- **Error number:** 1017; Symbol: ER_FILE_NOT_FOUND; SQLSTATE: HY000
  
  Message: Can't find file: '%s' (errno: %d - %s)

• Error number: 1052; Symbol: ER_NON_UNIQ_ERROR; SQLSTATE: 23000
Message: Column '%s' in %s is ambiguous

  %s = column name
  %s = location of column (for example, "field list")

Likely cause: A column appears in a query without appropriate qualification, such as in a select list or ON clause.

Examples:

```
mysql> SELECT i FROM t INNER JOIN t AS t2;
ERROR 1052 (23000): Column 'i' in field list is ambiguous

mysql> SELECT * FROM t LEFT JOIN t AS t2 ON i = i;
ERROR 1052 (23000): Column 'i' in on clause is ambiguous
```

Resolution:

• Qualify the column with the appropriate table name:

```
mysql> SELECT t2.i FROM t INNER JOIN t AS t2;
```

• Modify the query to avoid the need for qualification:

```
mysql> SELECT * FROM t LEFT JOIN t AS t2 USING (i);
```

This error occurs for attempts to select from and modify the same table within a single statement. If the
select attempt occurs within a derived table, you can avoid this error by setting the derived_merge flag
of the optimizer_switch system variable to force the subquery to be materialized into a temporary
table, which effectively causes it to be a different table from the one modified. See Optimizing Derived
Tables and View References with Merging or Materialization.

  Message: Lock wait timeout exceeded; try restarting transaction

  *InnoDB* reports this error when lock wait timeout expires. The statement that waited too long was rolled back (not the entire transaction). You can increase the value of the *innodb_lock_wait_timeout* configuration option if SQL statements should wait longer for other transactions to complete, or decrease it if too many long-running transactions are causing locking problems and reducing concurrency on a busy system.

• Error number: **1206**; Symbol: **ER_LOCK_TABLE_FULL**; SQLSTATE: **HY000**
  Message: The total number of locks exceeds the lock table size

  *InnoDB* reports this error when the total number of locks exceeds the amount of memory devoted to managing locks. To avoid this error, increase the value of *innodb_buffer_pool_size*. Within an individual application, a workaround may be to break a large operation into smaller pieces. For example, if the error occurs for a large *INSERT*, perform several smaller *INSERT* operations.

• Error number: 1213; Symbol: ER_LOCK_DEADLOCK; SQLSTATE: 40001
  Message: Deadlock found when trying to get lock; try restarting transaction

  InnoDB reports this error when a transaction encounters a deadlock and is automatically rolled back
  so that your application can take corrective action. To recover from this error, run all the operations in
  this transaction again. A deadlock occurs when requests for locks arrive in inconsistent order between
  transactions. The transaction that was rolled back released all its locks, and the other transaction
  can now get all the locks it requested. Thus, when you re-run the transaction that was rolled back, it
  might have to wait for other transactions to complete, but typically the deadlock does not recur. If you
  encounter frequent deadlocks, make the sequence of locking operations (LOCK TABLES, SELECT ... FOR UPDATE, and so on) consistent between the different transactions or applications that experience
  the issue. See Deadlocks in InnoDB for details.

- Error number: 1553; Symbol: ER_DROP_INDEX_FK; SQLSTATE: HY000
  Message: Cannot drop index '%s': needed in a foreign key constraint

\textit{InnoDB} reports this error when you attempt to drop the last index that can enforce a particular referential constraint.

For optimal performance with DML statements, \textit{InnoDB} requires an index to exist on foreign key columns, so that \texttt{UPDATE} and \texttt{DELETE} operations on a parent table can easily check whether corresponding rows exist in the child table. MySQL creates or drops such indexes automatically when needed, as a side-effect of \texttt{CREATE TABLE}, \texttt{CREATE INDEX}, and \texttt{ALTER TABLE} statements.

When you drop an index, \textit{InnoDB} checks if the index is used for checking a foreign key constraint. It is still OK to drop the index if there is another index that can be used to enforce the same constraint. \textit{InnoDB} prevents you from dropping the last index that can enforce a particular referential constraint.

Chapter 3 Client Error Message Reference

Client error messages originate from within the MySQL client library. Here is an example client error message, as displayed by the `mysql` client:

```
$> mysql -h no-such-host
ERROR 2005 (HY000): Unknown MySQL server host 'no-such-host' (0)
```

Each client error message includes an error code, SQLSTATE value, and message string, as described in Error Message Sources and Elements. These elements are available as described in Error Information Interfaces. For client errors, the SQLSTATE value is always 'HY000' (general error), so it is not meaningful for distinguishing one client error from another.

The client library also makes available to host client programs any errors that originate on the server side and are received by the client from the server. For a list of server-side errors, see Chapter 2, Server Error Message Reference.

In addition to the errors in the following list, the client library can also produce error messages that have error codes in the range from 1 to 999. See Chapter 4, Global Error Message Reference

Chapter 4 Global Error Message Reference

This document lists “global” error messages that are shared in the sense that they can be produced by the MySQL server or by MySQL client programs. These errors have error codes in the range from 1 to 999.

Each global error message includes an error code, SQLSTATE value, and message string, as described in Error Message Sources and Elements. These elements are available as described in Error Information Interfaces. For global errors, the SQLSTATE value is always ‘HY000’ (general error), so it is not meaningful for distinguishing one client error from another.
