• Error number: MY-010865; Symbol: ER_NDB_LOG_ENTRY; SQLSTATE: HY000
Message: NDB: %s
ER_NDB_LOG_ENTRY was added in 8.0.2.

• Error number: MY-010866; Symbol: ER_NDB_LOG_ENTRY_WITH_PREFIX; SQLSTATE: HY000
Message: NDB %s: %s
ER_NDB_LOG_ENTRY_WITH_PREFIX was added in 8.0.2.

• Error number: MY-010867; Symbol: ER_NDB_BINLOG_CANT_CREATE_PURGE_THD; SQLSTATE: HY000
Message: NDB: Unable to purge %s.%s File=%s (failed to setup thd)
ER_NDB_BINLOG_CANT_CREATE_PURGE_THD was added in 8.0.2, removed after 8.0.13.

• Error number: MY-010868; Symbol: ER_INNODB_UNKNOWN_COLLATION; SQLSTATE: HY000
Message: Unknown collation %lu.
ER_INNODB_UNKNOWN_COLLATION was added in 8.0.2.

• Error number: MY-010869; Symbol: ER_INNODB_INVALID_LOG_GROUP_HOME_DIR; SQLSTATE: HY000
Message: syntax error in innodb_log_group_home_dir
ER_INNODB_INVALID_LOG_GROUP_HOME_DIR was added in 8.0.2.

• Error number: MY-010870; Symbol: ER_INNODB_INVALID_INNODB_UNDO_DIRECTORY; SQLSTATE: HY000
Message: syntax error in innodb_undo_directory
ER_INNODB_INVALID_INNODB_UNDO_DIRECTORY was added in 8.0.2.

• Error number: MY-010871; Symbol: ER_INNODB_ILLEGAL_COLON_IN_POOL; SQLSTATE: HY000
Message: InnoDB: innodb_buffer_pool_filename cannot have colon (:) in the file name.
ER_INNODB_ILLEGAL_COLON_IN_POOL was added in 8.0.2.

• Error number: MY-010872; Symbol: ER_INNODB_INVALID_PAGE_SIZE; SQLSTATE: HY000
Message: InnoDB: Invalid page size=%lu.
ER_INNODB_INVALID_PAGE_SIZE was added in 8.0.2.

• Error number: MY-010873; Symbol: ER_INNODB_DIRTY_WATER_MARK_NOT_LOW; SQLSTATE: HY000
Message: InnoDB: innodb_max_dirty_pages_pct_lwm cannot be set higher than
innodb_max_dirty_pages_pct. Setting innodb_max_dirty_pages_pct_lwm to %lf
ER_INNODB_DIRTY_WATER_MARK_NOT_LOW was added in 8.0.2.

- **Error number:** MY-010874; Symbol: ER_INNODB_IO_CAPACITY_EXCEEDS_MAX; SQLSTATE: HY000
  Message: InnoDB: innodb_io_capacity cannot be set higher than innodb_io_capacity_max. Setting innodb_io_capacity to %lu

  ER_INNODB_IO_CAPACITY_EXCEEDS_MAX was added in 8.0.2.

- **Error number:** MY-010875; Symbol: ER_INNODB_FILES_SAME; SQLSTATE: HY000
  Message: %s and %s file names seem to be the same.

  ER_INNODB_FILES_SAME was added in 8.0.2.

- **Error number:** MY-010876; Symbol: ER_INNODB_UNREGISTERED_TRX_ACTIVE; SQLSTATE: HY000
  Message: Transaction not registered for MySQL 2PC, but transaction is active

  ER_INNODB_UNREGISTERED_TRX_ACTIVE was added in 8.0.2.

- **Error number:** MY-010877; Symbol: ER_INNODB_CLOSING_CONNECTION_ROLLS_BACK; SQLSTATE: HY000
  Message: MySQL is closing a connection that has an active InnoDB transaction. %llu row modifications will roll back.

  ER_INNODB_CLOSING_CONNECTION_ROLLS_BACK was added in 8.0.2.

- **Error number:** MY-010878; Symbol: ER_INNODB_TRX_XLATION_TABLE_OOM; SQLSTATE: HY000
  Message: InnoDB: fail to allocate memory for index translation table. Number of Index:%lu, array size:%lu

  ER_INNODB_TRX_XLATION_TABLE_OOM was added in 8.0.2.

- **Error number:** MY-010879; Symbol: ER_INNODB_CANT_FIND_INDEX_IN_INNODB_DD; SQLSTATE: HY000
  Message: Cannot find index %s in InnoDB index dictionary.

  ER_INNODB_CANT_FIND_INDEX_IN_INNODB_DD was added in 8.0.2.

- **Error number:** MY-010880; Symbol: ER_INNODB_INDEX_COLUMN_INFO_UNLIKE_MYSQLS; SQLSTATE: HY000
  Message: Found index %s whose column info does not match that of MySQL.

  ER_INNODB_INDEX_COLUMN_INFO_UNLIKE_MYSQLS was added in 8.0.2.

- **Error number:** MY-010881; Symbol: ER_INNODB_CANT_OPEN_TABLE; SQLSTATE: HY000
  Message: Failed to open table %s.

  ER_INNODB_CANT_OPEN_TABLE was added in 8.0.2, removed after 8.0.18.

- **Error number:** MY-010882; Symbol: ER_INNODB_CANT_BUILD_INDEX_XLATION_TABLE_FOR; SQLSTATE: HY000
  Message: Build InnoDB index translation table for Table %s failed
Server Error Message Reference

**ER_INNODB_CANT_BUILD_INDEX_XLATION_TABLE_FOR** was added in 8.0.2.

- Error number: MY-010883; Symbol: ER_INNODB_PK_NOT_IN_MYSQL; SQLSTATE: HY000
  
  Message: Table %s has a primary key in InnoDB data dictionary, but not in MySQL!

  **ER_INNODB_PK_NOT_IN_MYSQL** was added in 8.0.2.

- Error number: MY-010884; Symbol: ER_INNODB_PK_ONLY_IN_MYSQL; SQLSTATE: HY000
  
  Message: Table %s has no primary key in InnoDB data dictionary, but has one in MySQL! If you created the table with a MySQL version < 3.23.54 and did not define a primary key, but defined a unique key with all non-NULL columns, then MySQL internally treats that key as the primary key. You can fix this error by dump + DROP + CREATE + reimport of the table.

  **ER_INNODB_PK_ONLY_IN_MYSQL** was added in 8.0.2.

- Error number: MY-010885; Symbol: ER_INNODB_CLUSTERED_INDEX_PRIVATE; SQLSTATE: HY000
  
  Message: Table %s key_used_on_scan is %lu even though there is no primary key inside InnoDB.

  **ER_INNODB_CLUSTERED_INDEX_PRIVATE** was added in 8.0.2.

- Error number: MY-010886; Symbol: ER_INNODB_PARTITION_TABLE_LOWERCASED; SQLSTATE: HY000
  
  Message: Partition table %s opened after converting to lower case. The table may have been moved from a case-insensitive file system. Please recreate the table in the current file system.

  **ER_INNODB_PARTITION_TABLE_LOWERCASED** was added in 8.0.2, removed after 8.0.18.

- Error number: MY-010887; Symbol: ER_ERRMSG_REPLACEMENT_DODGY; SQLSTATE: HY000
  
  Message: Cannot replace error message (%s,%s,%s) "%s" with "%s"; wrong number or type of %% substitutions.

  **ER_ERRMSG_REPLACEMENT_DODGY** was added in 8.0.2.

- Error number: MY-010888; Symbol: ER_ERRMSG_REPLACEMENTS_FAILED; SQLSTATE: HY000
  
  Message: Table for error message replacements could not be found or read, or one or more replacements could not be applied.

  **ER_ERRMSG_REPLACEMENTS_FAILED** was added in 8.0.2.

- Error number: MY-010889; Symbol: ER_NPIPE_CANT_CREATE; SQLSTATE: HY000
  
  Message: %s: %s

  **ER_NPIPE_CANT_CREATE** was added in 8.0.2.

- Error number: MY-010890; Symbol: ER_PARTITION_MOVE_CREATED_DUPLICATE_ROW>Please Fix; SQLSTATE: HY000
  
  Message: Table %s: Delete from part %d failed with error %d. But it was already inserted into part %d, when moving the misplaced row! Please manually fix the duplicate row: %s

  **ER_PARTITION_MOVE_CREATED_DUPLICATE_ROW_PLEASE_FIX** was added in 8.0.2.

- Error number: MY-010891; Symbol: ER_AUDIT_CANT_ABORT_COMMAND; SQLSTATE: HY000
  
  Message: Command '%s' cannot be aborted. The trigger error was (%d) [%s]: %s
**ER_AUDIT_CANT_ABORT_COMMAND** was added in 8.0.2.

- **Error number:** MY-010892; **Symbol:** ER_AUDIT_CANT_ABORT_EVENT; **SQLSTATE:** HY000
  
  Message: Event '%s' cannot be aborted. The trigger error was (%d) [%s]: %s

**ER_AUDIT_CANT_ABORT_EVENT** was added in 8.0.2.

- **Error number:** MY-010893; **Symbol:** ER_AUDIT_WARNING; **SQLSTATE:** HY000
  
  Message: %s. The trigger error was (%d) [%s]: %s

**ER_AUDIT_WARNING** was added in 8.0.2.

- **Error number:** MY-010894; **Symbol:** ER_NDB_NUMBER_OF_CHANNELS; **SQLSTATE:** HY000
  
  Message: Slave SQL: Configuration with number of replication masters = %u' is not supported when applying to Ndb

**ER_NDB_NUMBER_OF_CHANNELS** was added in 8.0.2, removed after 8.0.13.

- **Error number:** MY-010895; **Symbol:** ER_NDB_SLAVE_PARALLEL_WORKERS; **SQLSTATE:** HY000
  
  Message: Slave SQL: Configuration 'slave_parallel_workers = %lu' is not supported when applying to Ndb

**ER_NDB_SLAVE_PARALLEL_WORKERS** was added in 8.0.2, removed after 8.0.13.

- **Error number:** MY-010896; **Symbol:** ER_NDB DISTRIBUTING ERR; **SQLSTATE:** HY000
  
  Message: NDB %s: distributing %s err: %u

**ER_NDB DISTRIBUTING ERR** was added in 8.0.2, removed after 8.0.13.

- **Error number:** MY-010897; **Symbol:** ER_RPL_SLAVE_INSECURE_CHANGE_MASTER; **SQLSTATE:** HY000
  
  Message: Storing MySQL user name or password information in the master info repository is not secure and is therefore not recommended. Please consider using the USER and PASSWORD connection options for START SLAVE; see the 'START SLAVE Syntax' in the MySQL Manual for more information.

**ER_RPL_SLAVE_INSECURE_CHANGE_MASTER** was added in 8.0.4.

- **Error number:** MY-010898; **Symbol:** ER_RPL_SLAVE_FLUSH_RELAY_LOGS NOT_ALLOWED; **SQLSTATE:** HY000
  
  Message: FLUSH RELAY LOGS cannot be performed on channel '%s'.

**ER_RPL_SLAVE_FLUSH_RELAY_LOGS NOT_ALLOWED** was added in 8.0.4, removed after 8.0.15.

- **Error number:** MY-010899; **Symbol:** ER_RPL_SLAVE_INCORRECT_CHANNEL; **SQLSTATE:** HY000
  
  Message: Slave channel '%s' does not exist.

**ER_RPL_SLAVE_INCORRECT_CHANNEL** was added in 8.0.4.

- **Error number:** MY-010900; **Symbol:** ER_FAILED_TO_FIND_DL_ENTRY; **SQLSTATE:** HY000
  
  Message: Can't find symbol '%s' in library.

**ER_FAILED_TO_FIND_DL_ENTRY** was added in 8.0.4.
• Error number: MY-010901; Symbol: ER_FAILED_TO_OPEN_SHARED_LIBRARY; SQLSTATE: HY000
Message: Can't open shared library '%s' (errno: %d %s).
ER_FAILED_TO_OPEN_SHARED_LIBRARY was added in 8.0.4.

• Error number: MY-010902; Symbol: ER_THREAD_PRIORITY_IGNORED; SQLSTATE: HY000
Message: Thread priority attribute setting in Resource Group SQL shall be ignored due to unsupported platform or insufficient privilege.
ER_THREAD_PRIORITY_IGNORED was added in 8.0.4.

• Error number: MY-010903; Symbol: ER_BINLOG_CACHE_SIZE_TOO_LARGE; SQLSTATE: HY000
Message: Option binlog_cache_size (%lu) is greater than max_binlog_cache_size (%lu); setting binlog_cache_size equal to max_binlog_cache_size.
ER_BINLOG_CACHE_SIZE_TOO_LARGE was added in 8.0.4.

• Error number: MY-010904; Symbol: ER_BINLOG_STMT_CACHE_SIZE_TOO_LARGE; SQLSTATE: HY000
Message: Option binlog_stmt_cache_size (%lu) is greater than max_binlog_stmt_cache_size (%lu); setting binlog_stmt_cache_size equal to max_binlog_stmt_cache_size.
ER_BINLOG_STMT_CACHE_SIZE_TOO_LARGE was added in 8.0.4.

• Error number: MY-010905; Symbol: ER_FAILED_TO_GENERATE_UNIQUE_LOGFILE; SQLSTATE: HY000
Message: Can't generate a unique log-filename %s.(1-999).
ER_FAILED_TO_GENERATE_UNIQUE_LOGFILE was added in 8.0.4.

• Error number: MY-010906; Symbol: ER_FAILED_TO_READ_FILE; SQLSTATE: HY000
Message: Error reading file '%s' (errno: %d - %s)
ER_FAILED_TO_READ_FILE was added in 8.0.4.

• Error number: MY-010907; Symbol: ER_FAILED_TO_WRITE_TO_FILE; SQLSTATE: HY000
Message: Error writing file '%s' (errno: %d - %s)
ER_FAILED_TO_WRITE_TO_FILE was added in 8.0.4.

• Error number: MY-010908; Symbol: ER_BINLOG_UNSAFE_MESSAGE_AND_STATEMENT; SQLSTATE: HY000
Message: %s Statement: %s
ER_BINLOG_UNSAFE_MESSAGE_AND_STATEMENT was added in 8.0.4.

• Error number: MY-010909; Symbol: ER_FORCE_CLOSE_THREAD; SQLSTATE: HY000
Message: %s: Forcing close of thread %ld user: '%s'.
ER_FORCE_CLOSE_THREAD was added in 8.0.4.

• Error number: MY-010910; Symbol: ER_SERVER_SHUTDOWN_COMPLETE; SQLSTATE: HY000
Message: %s: Shutdown complete (mysqld %s) %s.
ER_SERVER_SHUTDOWN_COMPLETE was added in 8.0.4.

- Error number: MY-010911; Symbol: ER_RPL_CANT_HAVESAME_BASENAME; SQLSTATE: HY000
  Message: Cannot have same base name '%s' for both binary and relay logs. Please check %s (default '%s' if --log-bin option is not used, default '%s' if --log-bin option is used without argument) and %s (default '%s') options to ensure they do not conflict.
  ER_RPL_CANT_HAVESAME_BASENAME was added in 8.0.3.

- Error number: MY-010912; Symbol: ER_RPL_GTID_MODE_REQUIRES_ENFORCE_GTID_CONSISTENCY_ON; SQLSTATE: HY000
  Message: GTID_MODE = ON requires ENFORCE_GTID_CONSISTENCY = ON.
  ER_RPL_GTID_MODE_REQUIRES_ENFORCE_GTID_CONSISTENCY_ON was added in 8.0.4.

- Error number: MY-010913; Symbol: ER_WARN_NO_SERVERID_SPECIFIED; SQLSTATE: HY000
  Message: You have not provided a mandatory server-id. Servers in a replication topology must have unique server-ids. Please refer to the proper server start-up parameters documentation.
  ER_WARN_NO_SERVERID_SPECIFIED was added in 8.0.3.

- Error number: MY-010914; Symbol: ER_ABORTING_USER_CONNECTION; SQLSTATE: HY000
  Message: Aborted connection %u to db: '%s' user: '%s' host: '%s' (%s).
  ER_ABORTING_USER_CONNECTION was added in 8.0.4.

- Error number: MY-010915; Symbol: ER_SQL_MODE_MERGED_WITH_STRICT_MODE; SQLSTATE: HY000
  Message: 'NO_ZERO_DATE', 'NO_ZERO_IN_DATE' and 'ERROR_FOR_DIVISION_BY_ZERO' sql modes should be used with strict mode. They will be merged with strict mode in a future release.
  ER_SQL_MODE_MERGED_WITH_STRICT_MODE was added in 8.0.4.

- Error number: MY-010916; Symbol: ER_GTID_PURGED_WAS_UPDATED; SQLSTATE: HY000
  Message: @@GLOBAL.GTID_PURGED was changed from '%s' to '%s'.
  ER_GTID_PURGED_WAS_UPDATED was added in 8.0.4.

- Error number: MY-010917; Symbol: ER_GTID_EXECUTED_WAS_UPDATED; SQLSTATE: HY000
  Message: @@GLOBAL.GTID_EXECUTED was changed from '%s' to '%s'.
  ER_GTID_EXECUTED_WAS_UPDATED was added in 8.0.4.

- Error number: MY-010918; Symbol: ER_DEPRECATE_MSG_WITH_REPLACEMENT; SQLSTATE: HY000
  Message: '%s' is deprecated and will be removed in a future release. Please use %s instead.
  ER_DEPRECATE_MSG_WITH_REPLACEMENT was added in 8.0.4.

- **Error number:** MY-010959; Symbol: ER_BINLOG_EVENT_WRITE_TO_STMT_CACHE_FAILED; SQLSTATE: HY000
  
  **Message:** Failed to write an incident event into stmt_cache.
  
  ER_BINLOG_EVENT_WRITE_TO_STMT_CACHE_FAILED was added in 8.0.4.

- **Error number:** MY-010960; Symbol: ER_SLAVE_RELAY_LOG_TRUNCATE_INFO; SQLSTATE: HY000
  
  **Message:** Relaylog file %s size was %llu, but was truncated at %llu.
  
  ER_SLAVE_RELAY_LOG_TRUNCATE_INFO was added in 8.0.4.

- **Error number:** MY-010961; Symbol: ER_SLAVE_RELAY_LOG_PURGE_FAILED; SQLSTATE: HY000
  
  **Message:** Unable to purge relay log files. %s:%s.
  
  ER_SLAVE_RELAY_LOG_PURGE_FAILED was added in 8.0.4.

- **Error number:** MY-010962; Symbol: ER_RPL_SLAVE_FILTER_CREATE_FAILED; SQLSTATE: HY000
  
  **Message:** Slave: failed in creating filter for channel '%s'.
  
  ER_RPL_SLAVE_FILTER_CREATE_FAILED was added in 8.0.4.

- **Error number:** MY-010963; Symbol: ER_RPL_SLAVE_GLOBAL_FILTERS_COPY_FAILED; SQLSTATE: HY000
  
  **Message:** Slave: failed in copying the global filters to its own per-channel filters on configuration for channel '%s'.
  
  ER_RPL_SLAVE_GLOBAL_FILTERS_COPY_FAILED was added in 8.0.4.

- **Error number:** MY-010964; Symbol: ER_RPL_SLAVE_RESET_FILTER_OPTIONS; SQLSTATE: HY000
  
  **Message:** There are per-channel replication filter(s) configured for channel '%s' which does not exist. The filter(s) have been discarded.
  
  ER_RPL_SLAVE_RESET_FILTER_OPTIONS was added in 8.0.4.

- **Error number:** MY-010965; Symbol: ER_MISSING_GRANT_SYSTEM_TABLE; SQLSTATE: HY000
  
  **Message:** The system table mysql.global_grants is missing. Please perform the MySQL upgrade procedure.
  
  ER_MISSING_GRANT_SYSTEM_TABLE was added in 8.0.4.

- **Error number:** MY-010966; Symbol: ER_MISSING_ACL_SYSTEM_TABLE; SQLSTATE: HY000
  
  **Message:** ACL table mysql.%.*s missing. Some operations may fail.
  
  ER_MISSING_ACL_SYSTEM_TABLE was added in 8.0.4.
- **Error number:** MY-010967; **Symbol:** ER_ANONYMOUS_AUTH_ID_NOT_ALLOWED_IN_MANDATORY_ROLES; **SQLSTATE:** HY000
  
  Message: Can't set mandatory_role %s@%s: Anonymous authorization IDs are not allowed as roles.

  ER_ANONYMOUS_AUTH_ID_NOT_ALLOWED_IN_MANDATORY_ROLES was added in 8.0.4.

- **Error number:** MY-010968; **Symbol:** ER_UNKNOWN_AUTH_ID_IN_MANDATORY_ROLE; **SQLSTATE:** HY000
  
  Message: Can't set mandatory_role: There's no such authorization ID %s@%s.

  ER_UNKNOWN_AUTH_ID_IN_MANDATORY_ROLE was added in 8.0.4.

- **Error number:** MY-010969; **Symbol:** ER_WRITE_ROW_TO_PARTITION_FAILED; **SQLSTATE:** HY000
  
  Message: Table '%s' failed to move/insert a row from part %d into part %d: %s.

  ER_WRITE_ROW_TO_PARTITION_FAILED was added in 8.0.4.

- **Error number:** MY-010970; **Symbol:** ER_RESOURCE_GROUP_METADATA_UPDATE_SKIPPED; **SQLSTATE:** HY000
  
  Message: Skipped updating resource group metadata in InnoDB read only mode.

  ER_RESOURCE_GROUP_METADATA_UPDATE_SKIPPED was added in 8.0.4.

- **Error number:** MY-010971; **Symbol:** ER_FAILED_TO_PERSIST_RESOURCE_GROUP_METADATA; **SQLSTATE:** HY000
  
  Message: Failed to persist resource group %s to Data Dictionary.

  ER_FAILED_TO_PERSIST_RESOURCE_GROUP_METADATA was added in 8.0.4.

- **Error number:** MY-010972; **Symbol:** ER_FAILED_TO_DESERIALIZE_RESOURCE_GROUP; **SQLSTATE:** HY000
  
  Message: Failed to deserialize resource group %s.

  ER_FAILED_TO_DESERIALIZE_RESOURCE_GROUP was added in 8.0.4.

- **Error number:** MY-010973; **Symbol:** ER_FAILED_TO_UPDATE_RESOURCE_GROUP; **SQLSTATE:** HY000
  
  Message: Update of resource group %s failed.

  ER_FAILED_TO_UPDATE_RESOURCE_GROUP was added in 8.0.4.

- **Error number:** MY-010974; **Symbol:** ER_RESOURCE_GROUP_VALIDATION_FAILED; **SQLSTATE:** HY000
  
  Message: Validation of resource group %s failed. Resource group is disabled.

  ER_RESOURCE_GROUP_VALIDATION_FAILED was added in 8.0.4.

- **Error number:** MY-010975; **Symbol:** ER_FAILED_TO_ALLOCATE_MEMORY_FOR_RESOURCE_GROUP; **SQLSTATE:** HY000
  
  Message: Unable to allocate memory for Resource Group %s.

  ER_FAILED_TO_ALLOCATE_MEMORY_FOR_RESOURCE_GROUP was added in 8.0.4.
Server Error Message Reference

- **Error number:** MY-010976; **Symbol:** ER_FAILED_TO_ALLOCATE_MEMORY_FOR_RESOURCE_GROUP_HASH; **SQLSTATE:** HY000

  Message: Failed to allocate memory for resource group hash.

  ER_FAILED_TO_ALLOCATE_MEMORY_FOR_RESOURCE_GROUP_HASH was added in 8.0.4.

- **Error number:** MY-010977; **Symbol:** ER_FAILED_TO_ADD_RESOURCE_GROUP_TO_MAP; **SQLSTATE:** HY000

  Message: Failed to add resource group %s to resource group map.

  ER_FAILED_TO_ADD_RESOURCE_GROUP_TO_MAP was added in 8.0.4.

- **Error number:** MY-010978; **Symbol:** ER_RESOURCE_GROUP_IS_DISABLED; **SQLSTATE:** HY000

  Message: Resource group feature is disabled. (Server is compiled with DISABLE_PSI_THREAD).

  ER_RESOURCE_GROUP_IS_DISABLED was added in 8.0.4.

- **Error number:** MY-010979; **Symbol:** ER_FAILED_TO_APPLY_RESOURCE_GROUP_CONTROLLER; **SQLSTATE:** HY000

  Message: Unable to apply resource group controller %s.

  ER_FAILED_TO_APPLY_RESOURCE_GROUP_CONTROLLER was added in 8.0.4.

- **Error number:** MY-010980; **Symbol:** ER_FAILED_TO_ACQUIRE_LOCK_ON_RESOURCE_GROUP; **SQLSTATE:** HY000

  Message: Unable to acquire lock on the resource group %s. Hint to switch resource group shall be ignored.

  ER_FAILED_TO_ACQUIRE_LOCK_ON_RESOURCE_GROUP was added in 8.0.4.

- **Error number:** MY-010981; **Symbol:** ER_PFS_NOTIFICATION_FUNCTION_REGISTER_FAILED; **SQLSTATE:** HY000

  Message: PFS %s notification function registration failed.

  ER_PFS_NOTIFICATION_FUNCTION_REGISTER_FAILED was added in 8.0.4.

- **Error number:** MY-010982; **Symbol:** ER_RES_GRP_SET_THR_AFFINITY_FAILED; **SQLSTATE:** HY000

  Message: Unable to bind thread id %llu to cpu id %u (error code %d - %s).

  ER_RES_GRP_SET_THR_AFFINITY_FAILED was added in 8.0.4.

- **Error number:** MY-010983; **Symbol:** ER_RES_GRP_SET_THR_AFFINITY_TO_CPUS_FAILED; **SQLSTATE:** HY000

  Message: Unable to bind thread id %llu to cpu ids (error code %d - %s).

  ER_RES_GRP_SET_THR_AFFINITY_TO_CPUS_FAILED was added in 8.0.4.

- **Error number:** MY-010984; **Symbol:** ER_RES_GRP_THD_UNBIND_FROM_CPU_FAILED; **SQLSTATE:** HY000

  Message: Unbind thread id %llu failed. (error code %d - %s).

  ER_RES_GRP_THD_UNBIND_FROM_CPU_FAILED was added in 8.0.4.
• Error number: MY-010985; Symbol: ER_RES_GRP_SET_THREAD_PRIORITY_FAILED; SQLSTATE: HY000
  Message: Setting thread priority %d to thread id %llu failed. (error code %d - %s).
  ER_RES_GRP_SET_THREAD_PRIORITY_FAILED was added in 8.0.4.

• Error number: MY-010986; Symbol: ER_RES_GRP_FAILED_TO_DETERMINE_NICE_CAPABILITY; SQLSTATE: HY000
  Message: Unable to determine CAP_SYS_NICE capability.
  ER_RES_GRP_FAILED_TO_DETERMINE_NICE_CAPABILITY was added in 8.0.4.

• Error number: MY-010987; Symbol: ER_RES_GRP_FAILED_TO_GET_THREAD_HANDLE; SQLSTATE: HY000
  Message: %s failed: Failed to get handle for thread %llu.
  ER_RES_GRP_FAILED_TO_GET_THREAD_HANDLE was added in 8.0.4.

• Error number: MY-010988; Symbol: ER_RES_GRP_GET_THREAD_PRIO_NOT_SUPPORTED; SQLSTATE: HY000
  Message: Retrieval of thread priority unsupported on %s.
  ER_RES_GRP_GET_THREAD_PRIO_NOT_SUPPORTED was added in 8.0.4.

• Error number: MY-010989; Symbol: ER_RES_GRP_FAILED_DETERMINE_CPU_COUNT; SQLSTATE: HY000
  Message: Unable to determine the number of CPUs.
  ER_RES_GRP_FAILED_DETERMINE_CPU_COUNT was added in 8.0.4.

• Error number: MY-010990; Symbol: ER_RES_GRP_FEATURE_NOT_AVAILABLE; SQLSTATE: HY000
  Message: Resource group feature shall not be available. Incompatible thread handling option.
  ER_RES_GRP_FEATURE_NOT_AVAILABLE was added in 8.0.4.

• Error number: MY-010991; Symbol: ER_RES_GRP_INVALID_THREAD_PRIORITY; SQLSTATE: HY000
  Message: Invalid thread priority %d for a %s resource group. Allowed range is [%d, %d].
  ER_RES_GRP_INVALID_THREAD_PRIORITY was added in 8.0.4.

• Error number: MY-010992; Symbol: ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_CPUID_FAILED; SQLSTATE: HY000
  Message: bind_to_cpu failed: processor_bind for cpuid %u failed (error code %d - %s).
  ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_CPUID_FAILED was added in 8.0.4.

• Error number: MY-010993; Symbol: ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_THREAD_FAILED; SQLSTATE: HY000
  Message: bind_to_cpu failed: processor_bind for thread %llx with cpu id %u (error code %d - %s).
  ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_THREAD_FAILED was added in 8.0.4.
• Error number: MY-010994; Symbol: \texttt{ER\_RES\_GRP\_SOLARIS\_PROCESSOR\_AFFINITY\_FAILED}; SQLSTATE: \texttt{HY000}
  
  Message: \texttt{\%s failed: processor\_affinity failed (error code \%d - \%s)}.
  
  \texttt{ER\_RES\_GRP\_SOLARIS\_PROCESSOR\_AFFINITY\_FAILED } was added in 8.0.4.

• Error number: MY-010995; Symbol: \texttt{ER\_DD\_UPGRADE\_RENAME\_IDX\_STATS\_FILE\_FAILED}; SQLSTATE: \texttt{HY000}
  
  Message: Error in renaming \texttt{mysql\_index\_stats.ibd}.
  
  \texttt{ER\_DD\_UPGRADE\_RENAME\_IDX\_STATS\_FILE\_FAILED } was added in 8.0.4.

• Error number: MY-010996; Symbol: \texttt{ER\_DD\_UPGRADE\_DD\_OPEN\_FAILED}; SQLSTATE: \texttt{HY000}
  
  Message: Error in opening data directory \texttt{\%s}.
  
  \texttt{ER\_DD\_UPGRADE\_DD\_OPEN\_FAILED } was added in 8.0.4.

• Error number: MY-010997; Symbol: \texttt{ER\_DD\_UPGRADE\_FAILED\_TO\_FETCH\_TABLESPACES}; SQLSTATE: \texttt{HY000}
  
  Message: Error in fetching list of tablespaces.
  
  \texttt{ER\_DD\_UPGRADE\_FAILED\_TO\_FETCH\_TABLESPACES } was added in 8.0.4.

• Error number: MY-010998; Symbol: \texttt{ER\_DD\_UPGRADE\_FAILED\_TO\_ACQUIRE\_TABLESPACE}; SQLSTATE: \texttt{HY000}
  
  Message: Error in acquiring Tablespace for SDI insertion \texttt{\%s}.
  
  \texttt{ER\_DD\_UPGRADE\_FAILED\_TO\_ACQUIRE\_TABLESPACE } was added in 8.0.4.

• Error number: MY-010999; Symbol: \texttt{ER\_DD\_UPGRADE\_FAILED\_TO\_RESOLVE\_TABLESPACE\_ENGINE}; SQLSTATE: \texttt{HY000}
  
  Message: Error in resolving Engine name for tablespace \texttt{\%s} with engine \texttt{\%s}.
  
  \texttt{ER\_DD\_UPGRADE\_FAILED\_TO\_RESOLVE\_TABLESPACE\_ENGINE } was added in 8.0.4.

• Error number: MY-011000; Symbol: \texttt{ER\_FAILED\_TO\_CREATE\_SDI\_FOR\_TABLESPACE}; SQLSTATE: \texttt{HY000}
  
  Message: Error in creating SDI for \texttt{\%s} tablespace.
  
  \texttt{ER\_FAILED\_TO\_CREATE\_SDI\_FOR\_TABLESPACE } was added in 8.0.4.

• Error number: MY-011001; Symbol: \texttt{ER\_FAILED\_TO\_STORE\_SDI\_FOR\_TABLESPACE}; SQLSTATE: \texttt{HY000}
  
  Message: Error in storing SDI for \texttt{\%s} tablespace.
  
  \texttt{ER\_FAILED\_TO\_STORE\_SDI\_FOR\_TABLESPACE } was added in 8.0.4.

• Error number: MY-011002; Symbol: \texttt{ER\_DD\_UPGRADE\_FAILED\_TO\_FETCH\_TABLES}; SQLSTATE: \texttt{HY000}
  
  Message: Error in fetching list of tables.
  
  \texttt{ER\_DD\_UPGRADE\_FAILED\_TO\_FETCH\_TABLES } was added in 8.0.4.

• Error number: MY-011003; Symbol: \texttt{ER\_DD\_UPGRADE\_DD\_POPULATED}; SQLSTATE: \texttt{HY000}
Message: Finished populating Data Dictionary tables with data.

**ER_DD_UPGRADE_DD_POPULATED** was added in 8.0.4.

- **Error number:** MY-011004; Symbol: **ER_DD_UPGRADE_INFO_FILE_OPEN_FAILED**; SQLSTATE: HY000
  
  Message: Could not open the upgrade info file '%s' in the MySQL servers datadir, errno: %d.

  **ER_DD_UPGRADE_INFO_FILE_OPEN_FAILED** was added in 8.0.4.

- **Error number:** MY-011005; Symbol: **ER_DD_UPGRADE_INFO_FILE_CLOSE_FAILED**; SQLSTATE: HY000
  
  Message: Could not close the upgrade info file '%s' in the MySQL servers datadir, errno: %d.

  **ER_DD_UPGRADE_INFO_FILE_CLOSE_FAILED** was added in 8.0.4.

- **Error number:** MY-011006; Symbol: **ER_DD_UPGRADE_TABLESPACE_MIGRATION_FAILED**; SQLSTATE: HY000
  
  Message: Got error %d from SE while migrating tablespaces.

  **ER_DD_UPGRADE_TABLESPACE_MIGRATION_FAILED** was added in 8.0.4.

- **Error number:** MY-011007; Symbol: **ER_DD_UPGRADE_FAILED_TO_CREATE_TABLE_STATS**; SQLSTATE: HY000
  
  Message: Error in creating TABLE statistics entry. Fix statistics data by using ANALYZE command.

  **ER_DD_UPGRADE_FAILED_TO_CREATE_TABLE_STATS** was added in 8.0.4.

- **Error number:** MY-011008; Symbol: **ER_DD_UPGRADE_TABLE_STATS_MIGRATE_COMPLETED**; SQLSTATE: HY000
  
  Message: Finished migrating TABLE statistics data.

  **ER_DD_UPGRADE_TABLE_STATS_MIGRATE_COMPLETED** was added in 8.0.4.

- **Error number:** MY-011009; Symbol: **ER_DD_UPGRADE_FAILED_TO_CREATE_INDEX_STATS**; SQLSTATE: HY000
  
  Message: Error in creating Index statistics entry. Fix statistics data by using ANALYZE command.

  **ER_DD_UPGRADE_FAILED_TO_CREATE_INDEX_STATS** was added in 8.0.4.

- **Error number:** MY-011010; Symbol: **ER_DD_UPGRADE_INDEX_STATS_MIGRATE_COMPLETED**; SQLSTATE: HY000
  
  Message: Finished migrating INDEX statistics data.

  **ER_DD_UPGRADE_INDEX_STATS_MIGRATE_COMPLETED** was added in 8.0.4.

- **Error number:** MY-011011; Symbol: **ER_DD_UPGRADE_FAILED_FIND_VALID_DATA_DIR**; SQLSTATE: HY000
  
  Message: Failed to find valid data directory.

  **ER_DD_UPGRADE_FAILED_FIND_VALID_DATA_DIR** was added in 8.0.4.

- **Error number:** MY-011012; Symbol: **ER_DD_UPGRADE_START**; SQLSTATE: HY000
  
  Message: Starting upgrade of data directory.
**Server Error Message Reference**

**ER_DD_UPGRADE_START** was added in 8.0.4.

- Error number: **MY-011013**; Symbol: **ER_DD_UPGRADE_FAILED_INIT_DD_SE**; SQLSTATE: **HY000**

  Message: Failed to initialize DD Storage Engine.

  **ER_DD_UPGRADE_FAILED_INIT_DD_SE** was added in 8.0.4.

- Error number: **MY-011014**; Symbol: **ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_ABORT**; SQLSTATE: **HY000**

  Message: Found partially upgraded DD. Aborting upgrade and deleting all DD tables. Start the upgrade process again.

  **ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_ABORT** was added in 8.0.4.

- Error number: **MY-011015**; Symbol: **ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_CONTINUE**; SQLSTATE: **HY000**

  Message: Found partially upgraded DD. Upgrade will continue and start the server.

  **ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_CONTINUE** was added in 8.0.4.

- Error number: **MY-011016**; Symbol: **ER_DD_UPGRADE_SE_LOGS_FAILED**; SQLSTATE: **HY000**

  Message: Error in upgrading engine logs.

  **ER_DD_UPGRADE_SE_LOGS_FAILED** was added in 8.0.4.

- Error number: **MY-011017**; Symbol: **ER_DD_UPGRADE_SDI_INFO_UPDATE_FAILED**; SQLSTATE: **HY000**

  Message: Error in updating SDI information.

  **ER_DD_UPGRADE_SDI_INFO_UPDATE_FAILED** was added in 8.0.4.

- Error number: **MY-011018**; Symbol: **ER_SKIP_UPDATING_METADATA_IN_SE_RO_MODE**; SQLSTATE: **HY000**

  Message: Skip updating %s metadata in InnoDB read-only mode.

  **ER_SKIP_UPDATING_METADATA_IN_SE_RO_MODE** was added in 8.0.4.

- Error number: **MY-011019**; Symbol: **ER_CREATED_SYSTEM_WITH_VERSION**; SQLSTATE: **HY000**

  Message: Created system views with I_S version %d.

  **ER_CREATED_SYSTEM_WITH_VERSION** was added in 8.0.4.

- Error number: **MY-011020**; Symbol: **ER_UNKNOWN_ERROR_DETECTED_IN_SE**; SQLSTATE: **HY000**

  Message: Unknown error detected %d in handler.

  **ER_UNKNOWN_ERROR_DETECTED_IN_SE** was added in 8.0.4.

- Error number: **MY-011021**; Symbol: **ER_READ_LOG_EVENT_FAILED**; SQLSTATE: **HY000**

  Message: Error in Log_event::read_log_event(): '%s', data_len: %lu, event_type: %d.

  **ER_READ_LOG_EVENT_FAILED** was added in 8.0.4.
- Error number: MY-011022; Symbol: ER_ROW_DATA_TOO_BIG_TO_WRITE_IN_BINLOG; SQLSTATE: HY000
  Message: The row data is greater than 4GB, which is too big to write to the binary log. 
  ER_ROW_DATA_TOO_BIG_TO_WRITE_IN_BINLOG was added in 8.0.4.

- Error number: MY-011023; Symbol: ER_FAILED_TO_CONSTRUCT_DROP_EVENT_QUERY; SQLSTATE: HY000
  Message: Unable to construct DROP EVENT SQL query string.
  ER_FAILED_TO_CONSTRUCT_DROP_EVENT_QUERY was added in 8.0.4.

- Error number: MY-011024; Symbol: ER_FAILED_TO_BINLOG_DROP_EVENT; SQLSTATE: HY000
  Message: Unable to binlog drop event %s.%s.
  ER_FAILED_TO_BINLOG_DROP_EVENT was added in 8.0.4.

- Error number: MY-011025; Symbol: ER_FAILED_TO_START_SLAVE_THREAD; SQLSTATE: HY000
  Message: Failed to start slave threads for channel '%s'.
  ER_FAILED_TO_START_SLAVE_THREAD was added in 8.0.4.

- Error number: MY-011026; Symbol: ER_RPL_IO_THREAD_KILLED; SQLSTATE: HY000
  Message: %s%s.
  ER_RPL_IO_THREAD_KILLED was added in 8.0.4.

- Error number: MY-011027; Symbol: ER_SLAVE_RECONNECT_FAILED; SQLSTATE: HY000
  Message: Failed registering on master, reconnecting to try again, log '%s' at position %s. %s.
  ER_SLAVE_RECONNECT_FAILED was added in 8.0.4.

- Error number: MY-011028; Symbol: ER_SLAVE_KILLED_AFTER_RECONNECT; SQLSTATE: HY000
  Message: Slave I/O thread killed during or after reconnect.
  ER_SLAVE_KILLED_AFTER_RECONNECT was added in 8.0.4.

- Error number: MY-011029; Symbol: ER_SLAVE_NOT_STARTED_ON_SOME_CHANNELS; SQLSTATE: HY000
  Message: Some of the channels are not created/initialized properly. Check for additional messages above. You will not be able to start replication on those channels until the issue is resolved and the server restarted.
  ER_SLAVE_NOT_STARTED_ON_SOME_CHANNELS was added in 8.0.4.

- Error number: MY-011030; Symbol: ER_FAILED_TO_ADD_RPL_FILTER; SQLSTATE: HY000
  Message: Failed to add a replication filter into filter map for channel '%s'.
  ER_FAILED_TO_ADD_RPL_FILTER was added in 8.0.4.

- Error number: MY-011031; Symbol: ER_PER_CHANNEL_RPL_FILTER_CONF_FOR_GRP_RPL; SQLSTATE: HY000
Message: There are per-channel replication filter(s) configured for group replication channel '%s' which is disallowed. The filter(s) have been discarded.

ER_PER_CHANNEL_RPL_FILTER_CONF_FOR_GRP_RPL was added in 8.0.4.

- Error number: MY-011032; Symbol: ER_RPL_FILTERS_NOT_ATTACHED_TO_CHANNEL; SQLSTATE: HY000

Message: There are per-channel replication filter(s) configured for channel '%s' which does not exist. The filter(s) have been discarded.

ER_RPL_FILTERS_NOT_ATTACHED_TO_CHANNEL was added in 8.0.4.

- Error number: MY-011033; Symbol: ER_FAILED_TO_BUILD_DO_AND_IGNORE_TABLE_HASHES; SQLSTATE: HY000

Message: An error occurred while building do_table and ignore_table rules to hashes for per-channel filter.

ER_FAILED_TO_BUILD_DO_AND_IGNORE_TABLE_HASHES was added in 8.0.4.

- Error number: MY-011034; Symbol: ER_CLONE_PLUGIN_NOT_LOADED; SQLSTATE: HY000

Message: Clone plugin not loaded.

ER_CLONE_PLUGIN_NOT_LOADED was added in 8.0.4, removed after 8.0.16.

- Error number: MY-011034; Symbol: ER_CLONE_PLUGIN_NOT_LOADED_TRACE; SQLSTATE: HY000

Message: Clone plugin cannot be loaded.

ER_CLONE_PLUGIN_NOT_LOADED_TRACE was added in 8.0.17.

- Error number: MY-011035; Symbol: ER_CLONE_HANDLER_EXISTS; SQLSTATE: HY000

Message: Clone Handler exists.

ER_CLONE_HANDLER_EXISTS was added in 8.0.4, removed after 8.0.16.

- Error number: MY-011035; Symbol: ER_CLONE_HANDLER_EXIST_TRACE; SQLSTATE: HY000

Message: Clone Handler exists.

ER_CLONE_HANDLER_EXIST_TRACE was added in 8.0.17.

- Error number: MY-011036; Symbol: ER_FAILED_TO_CREATE_CLONE_HANDLER; SQLSTATE: HY000

Message: Could not create Clone Handler.

ER_FAILED_TO_CREATE_CLONE_HANDLER was added in 8.0.4, removed after 8.0.16.

- Error number: MY-011036; Symbol: ER_CLONE_CREATE_HANDLER_FAIL_TRACE; SQLSTATE: HY000

Message: Could not create Clone Handler.

ER_CLONE_CREATE_HANDLER_FAIL_TRACE was added in 8.0.17.

- Error number: MY-011037; Symbol: ER_CYCLE_TIMER_IS_NOT_AVAILABLE; SQLSTATE: HY000
Message: The CYCLE timer is not available. WAIT events in the performance_schema will not be timed.

ER_CYCLE_TIMER_IS_NOT_AVAILABLE was added in 8.0.4.

•   Error number: MY-011038; Symbol: ER_NANOSECOND_TIMER_IS_NOT_AVAILABLE; SQLSTATE: HY000
Message: The NANOSECOND timer is not available. IDLE/STAGE/STATEMENT/TRANSACTION events in the performance_schema will not be timed.

ER_NANOSECOND_TIMER_IS_NOT_AVAILABLE was added in 8.0.4.

•   Error number: MY-011039; Symbol: ER_MICROSECOND_TIMER_IS_NOT_AVAILABLE; SQLSTATE: HY000
Message: The MICROSECOND timer is not available. IDLE/STAGE/STATEMENT/TRANSACTION events in the performance_schema will not be timed.

ER_MICROSECOND_TIMER_IS_NOT_AVAILABLE was added in 8.0.4.

•   Error number: MY-011040; Symbol: ER_PFS_MALLOC_ARRAY_OVERFLOW; SQLSTATE: HY000
Message: Failed to allocate memory for %zu chunks each of size %zu for buffer '%s' due to overflow.

ER_PFS_MALLOC_ARRAY_OVERFLOW was added in 8.0.4.

•   Error number: MY-011041; Symbol: ER_PFS_MALLOC_ARRAY_OOM; SQLSTATE: HY000
Message: Failed to allocate %zu bytes for buffer '%s' due to out-of-memory.

ER_PFS_MALLOC_ARRAY_OOM was added in 8.0.4.

•   Error number: MY-011042; Symbol: ER_INNODB_FAILED_TO_FIND_IDX_WITH_KEY_NO; SQLSTATE: HY000
Message: InnoDB could not find index %s key no %u for table %s through its index translation table.

ER_INNODB_FAILED_TO_FIND_IDX_WITH_KEY_NO was added in 8.0.4.

•   Error number: MY-011043; Symbol: ER_INNODB_FAILED_TO_FIND_IDX; SQLSTATE: HY000
Message: Cannot find index %s in InnoDB index translation table.

ER_INNODB_FAILED_TO_FIND_IDX was added in 8.0.4.

•   Error number: MY-011044; Symbol: ER_INNODB_FAILED_TO_FIND_IDX_FROM_DICT_CACHE; SQLSTATE: HY000
Message: InnoDB could not find key no %u with name %s from dict cache for table %s.

ER_INNODB_FAILED_TO_FIND_IDX_FROM_DICT_CACHE was added in 8.0.4.

•   Error number: MY-011045; Symbol: ER_INNODB_ACTIVE_INDEX_CHANGE_FAILED; SQLSTATE: HY000
Message: InnoDB: change_active_index(%u) failed.

ER_INNODB_ACTIVE_INDEX_CHANGE_FAILED was added in 8.0.4.

•   Error number: MY-011046; Symbol: ER_INNODB_DIFF_IN_REF_LEN; SQLSTATE: HY000
Message: Stored ref len is %u, but table ref len is %lu.
**ER_INNODB_DIFF_IN_REF_LEN** was added in 8.0.4.

- **Error number:** MY-011047; Symbol: ER_WRONG_TYPE_FOR_COLUMN_PREFIX_IDX_FLD; SQLSTATE: HY000
  
  Message: MySQL is trying to create a column prefix index field, on an inappropriate data type. Table name %s, column name %s.

**ER_WRONG_TYPE_FOR_COLUMN_PREFIX_IDX_FLD** was added in 8.0.4.

- **Error number:** MY-011048; Symbol: ER_INNODB_CANNOT_CREATE_TABLE; SQLSTATE: HY000
  
  Message: Cannot create table %s.

**ER_INNODB_CANNOT_CREATE_TABLE** was added in 8.0.4.

- **Error number:** MY-011049; Symbol: ER_INNODB_INTERNAL_INDEX; SQLSTATE: HY000
  
  Message: Found index %s in InnoDB index list but not its MySQL index number. It could be an InnoDB internal index.

**ER_INNODB_INTERNAL_INDEX** was added in 8.0.4.

- **Error number:** MY-011050; Symbol: ER_INNODB_IDX_CNT_MORE_THAN_DEFINED_IN_MYSQL; SQLSTATE: HY000
  
  Message: InnoDB: Table %s contains %lu indexes inside InnoDB, which is different from the number of indexes %u defined in MySQL.

**ER_INNODB_IDX_CNT_MORE_THAN_DEFINED_IN_MYSQL** was added in 8.0.4.

- **Error number:** MY-011051; Symbol: ER_INNODB_IDX_CNT_FEWER_THAN_DEFINED_IN_MYSQL; SQLSTATE: HY000
  
  Message: Table %s contains fewer indexes inside InnoDB than are defined in the MySQL. Have you mixed up with data dictionary from different installation?

**ER_INNODB_IDX_CNT_FEWER_THAN_DEFINED_IN_MYSQL** was added in 8.0.4.

- **Error number:** MY-011052; Symbol: ER_INNODB_IDX_COLUMN_CNT_DIFF; SQLSTATE: HY000
  
  Message: Index %s of %s has %lu columns unique inside InnoDB, but MySQL is asking statistics for %lu columns. Have you mixed data dictionary from different installation?

**ER_INNODB_IDX_COLUMN_CNT_DIFF** was added in 8.0.4.

- **Error number:** MY-011053; Symbol: ER_INNODB_USE_MONITOR_GROUP_NAME; SQLSTATE: HY000
  
  Message: Monitor counter %s cannot be turned on/off individually. Please use its module name to turn on/off the counters in the module as a group.

**ER_INNODB_USE_MONITOR_GROUP_NAME** was added in 8.0.4.

- **Error number:** MY-011054; Symbol: ER_INNODB_MONITOR_DEFAULT_VALUE_NOT_DEFINED; SQLSTATE: HY000
  
  Message: Default value is not defined for this set option. Please specify correct counter or module name.

**ER_INNODB_MONITOR_DEFAULT_VALUE_NOT_DEFINED** was added in 8.0.4.
• Error number: MY-011055; Symbol: ER_INNODB_MONITOR_IS_ENABLED; SQLSTATE: HY000
Message: InnoDB: Monitor "\%s" is already enabled.
ER_INNODB_MONITOR_IS_ENABLED was added in 8.0.4.

• Error number: MY-011056; Symbol: ER_INNODB_INVALID_MONITOR_COUNTER_NAME; SQLSTATE: HY000
Message: Invalid monitor counter: \%s.
ER_INNODB_INVALID_MONITOR_COUNTER_NAME was added in 8.0.4.

• Error number: MY-011057; Symbol: ER_WIN_LOAD_LIBRARY_FAILED; SQLSTATE: HY000
Message: LoadLibrary("\%s") failed: GetLastError returns %lu.
ER_WIN_LOAD_LIBRARY_FAILED was added in 8.0.4.

• Error number: MY-011058; Symbol: ER_PARTITION_HANDLER_ADMIN_MSG; SQLSTATE: HY000
Message: \%s.
ER_PARTITION_HANDLER_ADMIN_MSG was added in 8.0.4.

• Error number: MY-011059; Symbol: ER_RPL_RLI_INIT_INFO_MSG; SQLSTATE: HY000
Message: \%s.
ER_RPL_RLI_INIT_INFO_MSG was added in 8.0.4.

• Error number: MY-011060; Symbol: ER_DD_UPGRADE_TABLE_INTACT_ERROR; SQLSTATE: HY000
Message: \%s.
ER_DD_UPGRADE_TABLE_INTACT_ERROR was added in 8.0.4.

• Error number: MY-011061; Symbol: ER_SERVER_INIT_COMPILLED_IN_COMMANDS; SQLSTATE: HY000
Message: \%s.
ER_SERVER_INIT_COMPILLED_IN_COMMANDS was added in 8.0.4.

• Error number: MY-011062; Symbol: ER_MYISAM_CHECK_METHOD_ERROR; SQLSTATE: HY000
Message: \%s.
ER_MYISAM_CHECK_METHOD_ERROR was added in 8.0.4.

• Error number: MY-011063; Symbol: ER_MYISAM_CRASHED_ERROR; SQLSTATE: HY000
Message: \%s.
ER_MYISAM_CRASHED_ERROR was added in 8.0.4.

• Error number: MY-011064; Symbol: ER_WAITPID_FAILED; SQLSTATE: HY000
Message: Unable to wait for process %lld.
ER_WAITPID_FAILED was added in 8.0.4.
Server Error Message Reference

- **Error number:** MY-011065; **Symbol:** ER_FAILED_TO_FIND_MYSQLD_STATUS; **SQLSTATE:** HY000
  
  Message: Unable to determine if daemon is running: %s (rc=%d).  
  
  **ER_FAILED_TO_FIND_MYSQLD_STATUS** was added in 8.0.4.

- **Error number:** MY-011066; **Symbol:** ER_INNODB_ERROR_LOGGER_MSG; **SQLSTATE:** HY000
  
  Message: %s
  
  **ER_INNODB_ERROR_LOGGER_MSG** was added in 8.0.4.

- **Error number:** MY-011067; **Symbol:** ER_INNODB_ERROR_LOGGER_FATAL_MSG; **SQLSTATE:** HY000
  
  Message: [FATAL] InnoDB: %s
  
  **ER_INNODB_ERROR_LOGGER_FATAL_MSG** was added in 8.0.4.

  Message: The syntax '%s' is deprecated and will be removed in a future release. Please use %s instead.
  
  **ER_DEPRECATED_SYNTAX_WITH_REPLACEMENT** was added in 8.0.4.

- **Error number:** MY-011069; **Symbol:** ER_DEPRECATED_SYNTAX_NO_REPLACEMENT; **SQLSTATE:** HY000
  
  Message: The syntax '%s' is deprecated and will be removed in a future release.
  
  **ER_DEPRECATED_SYNTAX_NO_REPLACEMENT** was added in 8.0.4.

- **Error number:** MY-011070; **Symbol:** ER_DEPRECATED_MSG_NO_REPLACEMENT; **SQLSTATE:** HY000
  
  Message: '%s' is deprecated and will be removed in a future release.
  
  **ER_DEPRECATED_MSG_NO_REPLACEMENT** was added in 8.0.4.

- **Error number:** MY-011071; **Symbol:** ER_LOG_PRINTF_MSG; **SQLSTATE:** HY000
  
  Message: %s
  
  **ER_LOG_PRINTF_MSG** was added in 8.0.4.

- **Error number:** MY-011072; **Symbol:** ER_BINLOG_LOGGING_NOT_POSSIBLE; **SQLSTATE:** HY000
  
  Message: Binary logging not possible. Message: %s.
  
  **ER_BINLOG_LOGGING_NOT_POSSIBLE** was added in 8.0.4.

- **Error number:** MY-011073; **Symbol:** ER_FAILED_TO_SET_PERSISTED_OPTIONS; **SQLSTATE:** HY000
  
  Message: Failed to set persisted options.
  
  **ER_FAILED_TO_SET_PERSISTED_OPTIONS** was added in 8.0.4.

- **Error number:** MY-011074; **Symbol:** ER_COMPONENTS_FAILED_TO_ACQUIRE_SERVICE_IMPLEMENTATION; **SQLSTATE:** HY000
Message: Cannot acquire specified service implementation: '%s'.

**ER_COMPONENTS_FAILED_TO_ACQUIRE_SERVICE_IMPLEMENTATION** was added in 8.0.4.

- **Error number:** MY-011075; Symbol: **ER_RES_GRP_INVALID_VCPU_RANGE**; SQLSTATE: HY000
  
  Message: Invalid VCPU range %u-%u.

  **ER_RES_GRP_INVALID_VCPU_RANGE** was added in 8.0.4.

- **Error number:** MY-011076; Symbol: **ER_RES_GRP_INVALID_VCPU_ID**; SQLSTATE: HY000
  
  Message: Invalid cpu id %u.

  **ER_RES_GRP_INVALID_VCPU_ID** was added in 8.0.4.

- **Error number:** MY-011077; Symbol: **ER_ERROR_DURING_FLUSH_LOG_COMMIT_PHASE**; SQLSTATE: HY000
  
  Message: Got error %d during FLUSH_LOGS.

  **ER_ERROR_DURING_FLUSH_LOG_COMMIT_PHASE** was added in 8.0.4.

- **Error number:** MY-011078; Symbol: **ER_DROP_DATABASE_FAILED_RMDIR_MANUALLY**; SQLSTATE: HY000
  
  Message: Problem while dropping database. Can't remove database directory (%s). Please remove it manually.

  **ER_DROP_DATABASE_FAILED_RMDIR_MANUALLY** was added in 8.0.4.

- **Error number:** MY-011079; Symbol: **ER_BINLOG_EXPIRAY_LOG_DAYS_AND_SECS_USED_TOGETHER**; SQLSTATE: HY000
  
  Message: The option expire_logs_days cannot be used together with option binlog_expire_logs_seconds. Therefore, value of expire_logs_days is ignored.

  **ER_BINLOG_EXPIRAY_LOG_DAYS_AND_SECS_USED_TOGETHER** was added in 8.0.4, removed after 8.0.4.

- **Error number:** MY-011079; Symbol: **ER_EXPIRE_LOGS_DAYS_IGNORED**; SQLSTATE: HY000
  
  Message: The option expire_logs_days cannot be used together with option binlog_expire_logs_seconds. Therefore, value of expire_logs_days is ignored.

- **Error number:** MY-011080; Symbol: **ER_BINLOG_MALFORMED_OR_OLD_RELAY_LOG**; SQLSTATE: HY000
  
  Message: malformed or very old relay log which does not have FormatDescriptor.

  **ER_BINLOG_MALFORMED_OR_OLD_RELAY_LOG** was added in 8.0.4.

- **Error number:** MY-011081; Symbol: **ER_DD_UPGRADE_VIEW_COLUMN_NAME_TOO_LONG**; SQLSTATE: HY000
  
  Message: Upgrade of view '%s.%s' failed. Re-create the view with the explicit column name lesser than 64 characters.

  **ER_DD_UPGRADE_VIEW_COLUMN_NAME_TOO_LONG** was added in 8.0.4.

- **Error number:** MY-011082; Symbol: **ER_TABLE_NEEDS_DUMP_UPGRADE**; SQLSTATE: HY000

  Message: malformed or very old relay log which does not have FormatDescriptor.

  **ER_TABLE_NEEDS_DUMP_UPGRADE** was added in 8.0.4.
Message: Table upgrade required for `\%s`. Please dump/reload table to fix it!

\texttt{ER\_TABLE\_NEEDS\_DUMP\_UPGRADE} was added in 8.0.4.

- Error number: \texttt{MY-011083}; Symbol: \texttt{ER\_DD\_UPGRADE\_FAILED\_TO\_UPDATE\_VER\_NO\_IN\_TABLESPACE}; SQLSTATE: \texttt{HY000}

Message: Error in updating version number in \%s tablespace.

\texttt{ER\_DD\_UPGRADE\_FAILED\_TO\_UPDATE\_VER\_NO\_IN\_TABLESPACE} was added in 8.0.4.

- Error number: \texttt{MY-011084}; Symbol: \texttt{ER\_KEYRING\_MIGRATION\_FAILED}; SQLSTATE: \texttt{HY000}

Message: Keyring migration failed.

\texttt{ER\_KEYRING\_MIGRATION\_FAILED} was added in 8.0.4.

- Error number: \texttt{MY-011085}; Symbol: \texttt{ER\_KEYRING\_MIGRATION\_SUCCESSFUL}; SQLSTATE: \texttt{HY000}

Message: Keyring migration successful.

\texttt{ER\_KEYRING\_MIGRATION\_SUCCESSFUL} was added in 8.0.4.

- Error number: \texttt{MY-011086}; Symbol: \texttt{ER\_RESTART\_RECEIVED\_INFO}; SQLSTATE: \texttt{HY000}

Message: Received RESTART from user \%s. Restarting mysqld (Version: \%s).

\texttt{ER\_RESTART\_RECEIVED\_INFO} was added in 8.0.4.

- Error number: \texttt{MY-011087}; Symbol: \texttt{ER\_LCTN\_CHANGED}; SQLSTATE: \texttt{HY000}

Message: Different lower_case_table_names settings for server (\%u) and data dictionary (\%u).

\texttt{ER\_LCTN\_CHANGED} was added in 8.0.4.

- Error number: \texttt{MY-011088}; Symbol: \texttt{ER\_DD\_INITIALIZE}; SQLSTATE: \texttt{HY000}

Message: Data dictionary initializing version \%u.

\texttt{ER\_DD\_INITIALIZE} was added in 8.0.4.

- Error number: \texttt{MY-011089}; Symbol: \texttt{ER\_DD\_RESTART}; SQLSTATE: \texttt{HY000}

Message: Data dictionary restarting version \%u.

\texttt{ER\_DD\_RESTART} was added in 8.0.4.

- Error number: \texttt{MY-011090}; Symbol: \texttt{ER\_DD\_UPGRADE}; SQLSTATE: \texttt{HY000}

Message: Data dictionary upgrading from version \%u to \%u.

\texttt{ER\_DD\_UPGRADE} was added in 8.0.4.

- Error number: \texttt{MY-011091}; Symbol: \texttt{ER\_DD\_UPGRADE\_OFF}; SQLSTATE: \texttt{HY000}

Message: Data dictionary upgrade prohibited by the command line option `--no_dd_upgrade`.

\texttt{ER\_DD\_UPGRADE\_OFF} was added in 8.0.4.
• Error number: MY-011092; Symbol: ER_DD_UPGRADE_VERSION_NOT_SUPPORTED; SQLSTATE: HY000
  Message: Upgrading the data dictionary from dictionary version '%u' is not supported.
  ER_DD_UPGRADE_VERSION_NOT_SUPPORTED was added in 8.0.4.

• Error number: MY-011093; Symbol: ER_DD_UPGRADE_SCHEMA_UNAVAILABLE; SQLSTATE: HY000
  Message: Upgrading the data dictionary failed, temporary schema name '%s' not available.
  ER_DD_UPGRADE_SCHEMA_UNAVAILABLE was added in 8.0.4.

• Error number: MY-011094; Symbol: ER_DD_MINOR_DOWNGRADE; SQLSTATE: HY000
  Message: Data dictionary minor downgrade from version '%u' to '%u'.
  ER_DD_MINOR_DOWNGRADE was added in 8.0.4.

• Error number: MY-011095; Symbol: ER_DD_MINOR_DOWNGRADE_VERSION_NOT_SUPPORTED; SQLSTATE: HY000
  Message: Minor downgrade of the Data dictionary from dictionary version '%u' is not supported.
  ER_DD_MINOR_DOWNGRADE_VERSION_NOT_SUPPORTED was added in 8.0.4.

• Error number: MY-011096; Symbol: ER_DD_NO_VERSION_FOUND; SQLSTATE: HY000
  Message: No data dictionary version number found.
  ER_DD_NO_VERSION_FOUND was added in 8.0.4.

• Error number: MY-011097; Symbol: ER_THREAD_POOL_NOT_SUPPORTED_ON_PLATFORM; SQLSTATE: HY000
  Message: Thread pool not supported, requires a minimum of %s.
  ER_THREAD_POOL_NOT_SUPPORTED_ON_PLATFORM was added in 8.0.4.

• Error number: MY-011098; Symbol: ER_THREAD_POOL_SIZE_TOO_LOW; SQLSTATE: HY000
  Message: thread_pool_size=0 means thread pool disabled, Allowed range of thread_pool_size is %d-%d.
  ER_THREAD_POOL_SIZE_TOO_LOW was added in 8.0.4.

• Error number: MY-011099; Symbol: ER_THREAD_POOL_SIZE_TOO_HIGH; SQLSTATE: HY000
  Message: thread_pool_size=%lu is too high, %d is maximum, thread pool is disabled. Allowed range of thread_pool_size is %d-%d.
  ER_THREAD_POOL_SIZE_TOO_HIGH was added in 8.0.4.

• Error number: MY-011100; Symbol: ER_THREAD_POOL_ALGORITHM_INVALID; SQLSTATE: HY000
  Message: thread_pool_algorithm can be set to 0 and 1, 0 indicates the default low concurrency algorithm, 1 means a high concurrency algorithm.
  ER_THREAD_POOL_ALGORITHM_INVALID was added in 8.0.4.

• Error number: MY-011101; Symbol: ER_THREAD_POOL_INVALID_STALL_LIMIT; SQLSTATE: HY000
Message: thread_pool_stall_limit can be %d at minimum and %d at maximum, smaller values would render the thread pool fairly useless and higher values could make it possible to have undetected deadlock issues in the MySQL Server.

ER_THREAD_POOL_INVALID_STALL_LIMIT was added in 8.0.4.

- Error number: MY-011102; Symbol: ER_THREAD_POOL_INVALID_PRIO_KICKUP_TIMER; SQLSTATE: HY000
Message: Invalid value of thread_pool_prio_kickup_timer specified. Value of thread_pool_prio_kickup_timer should be in range 0-4294967294.

ER_THREAD_POOL_INVALID_PRIO_KICKUP_TIMER was added in 8.0.4.

- Error number: MY-011103; Symbol: ER_THREAD_POOL_MAX_UNUSED_THREADS_INVALID; SQLSTATE: HY000
Message: thread_pool_max_unused_threads cannot be set higher than %d.

ER_THREAD_POOL_MAX_UNUSED_THREADS_INVALID was added in 8.0.4.

- Error number: MY-011104; Symbol: ER_THREAD_POOL_CON_HANDLER_INIT_FAILED; SQLSTATE: HY000
Message: Failed to instantiate the connection handler object.

ER_THREAD_POOL_CON_HANDLER_INIT_FAILED was added in 8.0.4.

- Error number: MY-011105; Symbol: ER_THREAD_POOL_INIT_FAILED; SQLSTATE: HY000
Message: Failed to initialize thread pool plugin.

ER_THREAD_POOL_INIT_FAILED was added in 8.0.4.

- Error number: MY-011106; Symbol: ER_THREAD_POOL_PLUGIN_STARTED; SQLSTATE: HY000
Message: Thread pool plugin started successfully with parameters: thread_pool_size = %lu, thread_pool_algorithm = %s, thread_pool_stall_limit = %u, thread_pool_prio_kickup_timer = %u, thread_pool_max_unused_threads = %u, thread_pool_high_priority_connection = %d.

ER_THREAD_POOL_PLUGIN_STARTED was added in 8.0.4.

- Error number: MY-011107; Symbol: ER_THREAD_POOL_CANNOT_SET_THREAD_SPECIFIC_DATA; SQLSTATE: HY000
Message: Can't setup connection teardown thread-specific data.

ER_THREAD_POOL_CANNOT_SET_THREAD_SPECIFIC_DATA was added in 8.0.4.

- Error number: MY-011108; Symbol: ER_THREAD_POOL_FAILED_TO_CREATE_CONNECT_HANDLER_THD; SQLSTATE: HY000
Message: Creation of connect handler thread failed.

ER_THREAD_POOL_FAILED_TO_CREATE_CONNECT_HANDLER_THD was added in 8.0.4.

- Error number: MY-011109; Symbol: ER_THREAD_POOL_FAILED_TO_CREATE_THD_AND_AUTH_CONN; SQLSTATE: HY000
Message: Failed to create thd and authenticate connection.

ER_THREAD_POOL_FAILED_TO_CREATE_THD_AND_AUTH_CONN was added in 8.0.4.
Server Error Message Reference

- **Error number:** MY-011110; Symbol: ER_THREAD_POOL_FAILED_PROCESS_CONNECT_EVENT; SQLSTATE: HY000
  
  **Message:** Failed to process connection event.

  `ER_THREAD_POOL_FAILED_PROCESS_CONNECT_EVENT` was added in 8.0.4.

- **Error number:** MY-011111; Symbol: ER_THREAD_POOL_FAILED_TO_CREATE_POOL; SQLSTATE: HY000
  
  **Message:** Can't create pool thread (error %d, errno: %d).

  `ER_THREAD_POOL_FAILED_TO_CREATE_POOL` was added in 8.0.4.

  Message: Mecab: createTagger() failed: %s.

ER_MECAB_FAILED_TO_CREATE_TRIGGER was added in 8.0.4.

- Error number: MY-011121; Symbol: ER_MECAB_UNSUPPORTED_CHARSET; SQLSTATE: HY000
  Message: Mecab: Unsupported dictionary charset %s.

ER_MECAB_UNSUPPORTED_CHARSET was added in 8.0.4.

- Error number: MY-011122; Symbol: ER_MECAB_CHARSET_LOADED; SQLSTATE: HY000
  Message: Mecab: Loaded dictionary charset is %s.

ER_MECAB_CHARSET_LOADED was added in 8.0.4.

- Error number: MY-011123; Symbol: ER_MECAB_PARSE_FAILED; SQLSTATE: HY000
  Message: Mecab: parse() failed: %s.

ER_MECAB_PARSE_FAILED was added in 8.0.4.

- Error number: MY-011124; Symbol: ER_MECAB_OOM_WHILE_PARSING_TEXT; SQLSTATE: HY000

ER_MECAB_OOM_WHILE_PARSING_TEXT was added in 8.0.4.

- Error number: MY-011125; Symbol: ER_MECAB_CREATE_LATTICE_FAILED; SQLSTATE: HY000
  Message: Mecab: createLattice() failed: %s.

ER_MECAB_CREATE_LATTICE_FAILED was added in 8.0.4.

- Error number: MY-011126; Symbol: ER_SEMISYNC_TRACE_ENTER_FUNC; SQLSTATE: HY000
  Message: ---> %s enter.

ER_SEMISYNC_TRACE_ENTER_FUNC was added in 8.0.4.

- Error number: MY-011127; Symbol: ER_SEMISYNC_TRACE_EXIT_WITH_INT_EXIT_CODE; SQLSTATE: HY000
  Message: <--- %s exit (%d).

ER_SEMISYNC_TRACE_EXIT_WITH_INT_EXIT_CODE was added in 8.0.4.

- Error number: MY-011128; Symbol: ER_SEMISYNC_TRACE_EXIT_WITH_BOOL_EXIT_CODE; SQLSTATE: HY000
  Message: <--- %s exit (%s).

ER_SEMISYNC_TRACE_EXIT_WITH_BOOL_EXIT_CODE was added in 8.0.4.

- Error number: MY-011129; Symbol: ER_SEMISYNC_TRACE_EXIT; SQLSTATE: HY000
  Message: <--- %s exit.
ER_SEMISYNC_TRACE_EXIT was added in 8.0.4.

- Error number: MY-011130; Symbol: ER_SEMISYNC_RPL_INIT_FOR_TRX; SQLSTATE: HY000
  Message: Semi-sync replication initialized for transactions.
  ER_SEMISYNC_RPL_INIT_FOR_TRX was added in 8.0.4.

- Error number: MY-011131; Symbol: ER_SEMISYNC_FAILED_TO_ALLOCATE_TRX_NODE; SQLSTATE: HY000
  Message: %s: transaction node allocation failed for: (%s, %lu).
  ER_SEMISYNC_FAILED_TO_ALLOCATE_TRX_NODE was added in 8.0.4.

- Error number: MY-011132; Symbol: ER_SEMISYNC_BINLOG_WRITE_OUT_OF_ORDER; SQLSTATE: HY000
  Message: %s: binlog write out-of-order, tail (%s, %lu), new node (%s, %lu).
  ER_SEMISYNC_BINLOG_WRITE_OUT_OF_ORDER was added in 8.0.4.

- Error number: MY-011133; Symbol: ER_SEMISYNC_INSERT_LOG_INFO_IN_ENTRY; SQLSTATE: HY000
  Message: %s: insert (%s, %lu) in entry(%u).
  ER_SEMISYNC_INSERT_LOG_INFO_IN_ENTRY was added in 8.0.4.

- Error number: MY-011134; Symbol: ER_SEMISYNC_PROBE_LOG_INFO_IN_ENTRY; SQLSTATE: HY000
  Message: %s: probe (%s, %lu) in entry(%u).
  ER_SEMISYNC_PROBE_LOG_INFO_IN_ENTRY was added in 8.0.4.

- Error number: MY-011135; Symbol: ER_SEMISYNC_CLEARED_ALL_ACTIVE_TRANSACTION_NODES; SQLSTATE: HY000
  Message: %s: cleared all nodes.
  ER_SEMISYNC_CLEARED_ALL_ACTIVE_TRANSACTION_NODES was added in 8.0.4.

- Error number: MY-011136; Symbol: ER_SEMISYNC_CLEARED_ACTIVE_TRANSACTION_TILL_POS; SQLSTATE: HY000
  Message: %s: cleared %d nodes back until pos (%s, %lu).
  ER_SEMISYNC_CLEARED_ACTIVE_TRANSACTION_TILL_POS was added in 8.0.4.

- Error number: MY-011137; Symbol: ER_SEMISYNC_REPLY_MAGIC_NO_ERROR; SQLSTATE: HY000
  Message: Read semi-sync reply magic number error.
  ER_SEMISYNC_REPLY_MAGIC_NO_ERROR was added in 8.0.4.

- Error number: MY-011138; Symbol: ER_SEMISYNC_REPLY_PKT_LENGTH_TOO_SMALL; SQLSTATE: HY000
  Message: Read semi-sync reply length error; packet is too small.
  ER_SEMISYNC_REPLY_PKT_LENGTH_TOO_SMALL was added in 8.0.4.
- Error number: MY-011139; Symbol: ER_SEMISYNC_REPLY_BINLOG_FILE_TOO_LARGE; SQLSTATE: HY000
  Message: Read semi-sync reply binlog file length too large.
  ER_SEMISYNC_REPLY_BINLOG_FILE_TOO_LARGE was added in 8.0.4.

- Error number: MY-011140; Symbol: ER_SEMISYNC_SERVER_REPLY; SQLSTATE: HY000
  Message: %s: Got reply(%s, %lu) from server %u.
  ER_SEMISYNC_SERVER_REPLY was added in 8.0.4.

- Error number: MY-011141; Symbol: ER_SEMISYNC_FUNCTION_CALLED_TWICE; SQLSTATE: HY000
  Message: %s called twice.
  ER_SEMISYNC_FUNCTION_CALLED_TWICE was added in 8.0.4.

- Error number: MY-011142; Symbol: ER_SEMISYNC_RPL_ENABLED_ON_MASTER; SQLSTATE: HY000
  Message: Semi-sync replication enabled on the master.
  ER_SEMISYNC_RPL_ENABLED_ON_MASTER was added in 8.0.4.

- Error number: MY-011143; Symbol: ER_SEMISYNC_MASTER_OOM; SQLSTATE: HY000
  Message: Cannot allocate memory to enable semi-sync on the master.
  ER_SEMISYNC_MASTER_OOM was added in 8.0.4.

- Error number: MY-011144; Symbol: ER_SEMISYNC_DISABLED_ON_MASTER; SQLSTATE: HY000
  Message: Semi-sync replication disabled on the master.
  ER_SEMISYNC_DISABLED_ON_MASTER was added in 8.0.4.

- Error number: MY-011145; Symbol: ER_SEMISYNC_FORCED_SHUTDOWN; SQLSTATE: HY000
  ER_SEMISYNC_FORCED_SHUTDOWN was added in 8.0.4.

- Error number: MY-011146; Symbol: ER_SEMISYNC_MASTER_GOT_REPLY_AT_POS; SQLSTATE: HY000
  Message: %s: Got reply at (%s, %lu).
  ER_SEMISYNC_MASTER_GOT_REPLY_AT_POS was added in 8.0.4.

- Error number: MY-011147; Symbol: ER_SEMISYNC_MASTER_SIGNAL_ALL_WAITING_THREADS; SQLSTATE: HY000
  Message: %s: signal all waiting threads.
  ER_SEMISYNC_MASTER_SIGNAL_ALL_WAITING_THREADS was added in 8.0.4.

- Error number: MY-011148; Symbol: ER_SEMISYNC_MASTER_TRX_WAIT_POS; SQLSTATE: HY000
  Message: %s: wait pos (%s, %lu), repl(%d).
**ER_SEMISYNC_MASTER_TRX_WAIT_POS** was added in 8.0.4.

- **Error number:** MY-011149; Symbol: **ER_SEMISYNC_BINLOG_REPLY_IS_AHEAD**; SQLSTATE: HY000
  
  Message: %s: Binlog reply is ahead (%s, %lu).

**ER_SEMISYNC_BINLOG_REPLY_IS_AHEAD** was added in 8.0.4.

- **Error number:** MY-011150; Symbol: **ER_SEMISYNC_MOVE_BACK_WAIT_POS**; SQLSTATE: HY000
  
  Message: %s: move back wait position (%s, %lu).

**ER_SEMISYNC_MOVE_BACK_WAIT_POS** was added in 8.0.4.

- **Error number:** MY-011151; Symbol: **ER_SEMISYNC_INIT_WAIT_POS**; SQLSTATE: HY000
  
  Message: %s: init wait position (%s, %lu).

**ER_SEMISYNC_INIT_WAIT_POS** was added in 8.0.4.

- **Error number:** MY-011152; Symbol: **ER_SEMISYNC_WAIT_TIME_FOR_BINLOG_SENT**; SQLSTATE: HY000
  
  Message: %s: wait %lu ms for binlog sent (%s, %lu).

**ER_SEMISYNC_WAIT_TIME_FOR_BINLOG_SENT** was added in 8.0.4.

- **Error number:** MY-011153; Symbol: **ER_SEMISYNC_WAIT_FOR_BINLOG_TIMEDOUT**; SQLSTATE: HY000
  
  Message: Timeout waiting for reply of binlog (file: %s, pos: %lu), semi-sync up to file %s, position %lu.

**ER_SEMISYNC_WAIT_FOR_BINLOG_TIMEDOUT** was added in 8.0.4.

- **Error number:** MY-011154; Symbol: **ER_SEMISYNC_WAIT_TIME_ASSESSMENT_FOR_COMMIT_TRX_FAILED**; SQLSTATE: HY000
  
  Message: Assessment of waiting time for commitTrx failed at wait position (%s, %lu).

**ER_SEMISYNC_WAIT_TIME_ASSESSMENT_FOR_COMMIT_TRX_FAILED** was added in 8.0.4.

- **Error number:** MY-011155; Symbol: **ER_SEMISYNC_RPL_SWITCHED_OFF**; SQLSTATE: HY000
  
  Message: Semi-sync replication switched OFF.

**ER_SEMISYNC_RPL_SWITCHED_OFF** was added in 8.0.4.

- **Error number:** MY-011156; Symbol: **ER_SEMISYNC_RPL_SWITCHED_ON**; SQLSTATE: HY000
  
  Message: Semi-sync replication switched ON at (%s, %lu).

**ER_SEMISYNC_RPL_SWITCHED_ON** was added in 8.0.4.

- **Error number:** MY-011157; Symbol: **ER_SEMISYNC_NO_SPACE_IN_THE_PKT**; SQLSTATE: HY000
  
  Message: No enough space in the packet for semi-sync extra header, semi-sync replication disabled.

**ER_SEMISYNC_NO_SPACE_IN_THE_PKT** was added in 8.0.4.
• Error number: MY-011158; Symbol: ER_SEMISYNC_SYNC_HEADER_UPDATE_INFO; SQLSTATE: HY000
Message: %s: server(%d), (%s, %lu) sync(%d), repl(%d).
ER_SEMISYNC_SYNC_HEADER_UPDATE_INFO was added in 8.0.4.

• Error number: MY-011159; Symbol: ER_SEMISYNC_FAILED_TO_INSERT_TRX_NODE; SQLSTATE: HY000
Message: Semi-sync failed to insert tranx_node for binlog file: %s, position: %lu.
ER_SEMISYNC_FAILED_TO_INSERT_TRX_NODE was added in 8.0.4.

• Error number: MY-011160; Symbol: ER_SEMISYNC_TRX_SKIPPED_AT_POS; SQLSTATE: HY000
Message: %s: Transaction skipped at (%s, %lu).
ER_SEMISYNC_TRX_SKIPPED_AT_POS was added in 8.0.4.

• Error number: MY-011161; Symbol: ER_SEMISYNC_MASTER_FAILED_ON_NET_FLUSH; SQLSTATE: HY000
Message: Semi-sync master failed on net_flush() before waiting for slave reply.
ER_SEMISYNC_MASTER_FAILED_ON_NET_FLUSH was added in 8.0.4.

• Error number: MY-011162; Symbol: ER_SEMISYNC_RECEIVED_ACK_IS_SMALLER; SQLSTATE: HY000
Message: The received ack is smaller than m_greatest_ack.
ER_SEMISYNC_RECEIVED_ACK_IS_SMALLER was added in 8.0.4.

• Error number: MY-011163; Symbol: ER_SEMISYNC_ADD_ACK_TO_SLOT; SQLSTATE: HY000
Message: Add the ack into slot %u.
ER_SEMISYNC_ADD_ACK_TO_SLOT was added in 8.0.4.

• Error number: MY-011164; Symbol: ER_SEMISYNC_UPDATE_EXISTING_SLAVE_ACK; SQLSTATE: HY000
Message: Update an existing ack in slot %u.
ER_SEMISYNC_UPDATE_EXISTING_SLAVE_ACK was added in 8.0.4.

• Error number: MY-011165; Symbol: ER_SEMISYNC_FAILED_TO_START_ACK_RECEIVER_THD; SQLSTATE: HY000
Message: Failed to start semi-sync ACK receiver thread, could not create thread(errno:%d).
ER_SEMISYNC_FAILED_TO_START_ACK_RECEIVER_THD was added in 8.0.4.

• Error number: MY-011166; Symbol: ER_SEMISYNC_STARTING_ACK_RECEIVER_THD; SQLSTATE: HY000
Message: Starting ack receiver thread.
ER_SEMISYNC_STARTING_ACK_RECEIVER_THD was added in 8.0.4.

• Error number: MY-011167; Symbol: ER_SEMISYNC_FAILED_TO_WAIT_ON_DUMP_SOCKET; SQLSTATE: HY000
Message: Failed to wait on semi-sync dump sockets, error: errno=%d.

**ER_SEMISYNC_FAILED_TO_WAIT_ON_DUMP_SOCKET** was added in 8.0.4.

- Error number: MY-011168; Symbol: ER_SEMISYNC_STOPPING_ACK_RECEIVER_THREAD; SQLSTATE: HY000

Message: Stopping ack receiver thread.

**ER_SEMISYNC_STOPPING_ACK_RECEIVER_THREAD** was added in 8.0.4.

- Error number: MY-011169; Symbol: ER_SEMISYNC_FAILED_REGISTER_SLAVE_TO_RECEIVER; SQLSTATE: HY000

Message: Failed to register slave to semi-sync ACK receiver thread.

**ER_SEMISYNC_FAILED_REGISTER_SLAVE_TO_RECEIVER** was added in 8.0.4.

- Error number: MY-011170; Symbol: ER_SEMISYNC_START_BINLOG_DUMP_TO_SLAVE; SQLSTATE: HY000

Message: Start %s binlog_dump to slave (server_id: %d), pos(%s, %lu).

**ER_SEMISYNC_START_BINLOG_DUMP_TO_SLAVE** was added in 8.0.4.

- Error number: MY-011171; Symbol: ER_SEMISYNC_STOP_BINLOG_DUMP_TO_SLAVE; SQLSTATE: HY000

Message: Stop %s binlog_dump to slave (server_id: %d).

**ER_SEMISYNC_STOP_BINLOG_DUMP_TO_SLAVE** was added in 8.0.4.

- Error number: MY-011172; Symbol: ER_SEMISYNC_UNREGISTER_TRX_OBSERVER_FAILED; SQLSTATE: HY000

Message: unregister_trans_observer failed.

**ER_SEMISYNC_UNREGISTER_TRX_OBSERVER_FAILED** was added in 8.0.4.

- Error number: MY-011173; Symbol: ER_SEMISYNC_UNREGISTER_BINLOG_STORAGE_OBSERVER_FAILED; SQLSTATE: HY000

Message: unregister_binlog_storage_observer failed.

**ER_SEMISYNC_UNREGISTER_BINLOG_STORAGE_OBSERVER_FAILED** was added in 8.0.4.

- Error number: MY-011174; Symbol: ER_SEMISYNC_UNREGISTER_BINLOG_TRANSMIT_OBSERVER_FAILED; SQLSTATE: HY000

Message: unregister_binlog_transmit_observer failed.

**ER_SEMISYNC_UNREGISTER_BINLOG_TRANSMIT_OBSERVER_FAILED** was added in 8.0.4.

- Error number: MY-011175; Symbol: ER_SEMISYNC_UNREGISTERED_REPLICATOR; SQLSTATE: HY000

Message: unregister_replicator OK.

**ER_SEMISYNC_UNREGISTERED_REPLICATOR** was added in 8.0.4.

- Error number: MY-011176; Symbol: ER_SEMISYNC_SOCKET_FD_TOO_LARGE; SQLSTATE: HY000
Message: Semisync slave socket fd is %u. select() cannot handle if the socket fd is bigger than %u (FD_SETSIZE).

ER_SEMISYNC_SOCKET_FD_TOO_LARGE was added in 8.0.4.

•   Error number: MY-011177; Symbol: ER_SEMISYNC_SLAVE_REPLY; SQLSTATE: HY000
Message: %s: reply - %d.

ER_SEMISYNC_SLAVE_REPLY was added in 8.0.4.

•   Error number: MY-011178; Symbol: ER_SEMISYNC_MISSING_MAGIC_NO_FOR_SEMISYNC_PKT; SQLSTATE: HY000
Message: Missing magic number for semi-sync packet, packet len: %lu.

ER_SEMISYNC_MISSING_MAGIC_NO_FOR_SEMISYNC_PKT was added in 8.0.4.

•   Error number: MY-011179; Symbol: ER_SEMISYNC_SLAVE_START; SQLSTATE: HY000
Message: Slave I/O thread: Start %s replication to master '%s@%s:%d' in log '%s' at position %lu.

ER_SEMISYNC_SLAVE_START was added in 8.0.4.

•   Error number: MY-011180; Symbol: ER_SEMISYNC_SLAVE_REPLY_WITH_BINLOG_INFO; SQLSTATE: HY000
Message: %s: reply (%s, %lu).

ER_SEMISYNC_SLAVE_REPLY_WITH_BINLOG_INFO was added in 8.0.4.

•   Error number: MY-011181; Symbol: ER_SEMISYNC_SLAVE_NET_FLUSH_REPLY_FAILED; SQLSTATE: HY000
Message: Semi-sync slave net_flush() reply failed.

ER_SEMISYNC_SLAVE_NET_FLUSH_REPLY_FAILED was added in 8.0.4.

•   Error number: MY-011182; Symbol: ER_SEMISYNC_SLAVE_SEND_REPLY_FAILED; SQLSTATE: HY000
Message: Semi-sync slave send reply failed: %s (%d).

ER_SEMISYNC_SLAVE_SEND_REPLY_FAILED was added in 8.0.4.

•   Error number: MY-011183; Symbol: ER_SEMISYNC_EXECUTION_FAILED_ON_MASTER; SQLSTATE: HY000
Message: Execution failed on master: %s; error %d

ER_SEMISYNC_EXECUTION_FAILED_ON_MASTER was added in 8.0.4.

•   Error number: MY-011184; Symbol: ER_SEMISYNC_NOT_SUPPORTED_BY_MASTER; SQLSTATE: HY000
Message: Master server does not support semi-sync, fallback to asynchronous replication

ER_SEMISYNC_NOT_SUPPORTED_BY_MASTER was added in 8.0.4.

•   Error number: MY-011185; Symbol: ER_SEMISYNC_SLAVE_SET_FAILED; SQLSTATE: HY000
Message: Set 'rpl_semi_sync_slave=1' on master failed
ER_SEMISYNC_SLAVE_SET_FAILED was added in 8.0.4.

- Error number: MY-011186; Symbol: ER_SEMISYNC_FAILED_TO_STOP_ACK_RECEIVER_THD; SQLSTATE: HY000
  Message: Failed to stop ack receiver thread on my_thread_join, errno(%d).
  ER_SEMISYNC_FAILED_TO_STOP_ACK_RECEIVER_THD was added in 8.0.4.

- Error number: MY-011187; Symbol: ER_FIREWALL_FAILED_TO_READ_FIREWALL_TABLES; SQLSTATE: HY000
  Message: Failed to read the firewall tables
  ER_FIREWALL_FAILED_TO_READ_FIREWALL_TABLES was added in 8.0.4.

- Error number: MY-011188; Symbol: ER_FIREWALL_FAILED_TO_REG_DYNAMIC_PRIVILEGES; SQLSTATE: HY000
  Message: Failed to register dynamic privileges
  ER_FIREWALL_FAILED_TO_REG_DYNAMIC_PRIVILEGES was added in 8.0.4.

- Error number: MY-011189; Symbol: ER_FIREWALL_RECORDING_STMT_WAS_TRUNCATED; SQLSTATE: HY000
  Message: Statement was truncated and not recorded: %s
  ER_FIREWALL_RECORDING_STMT_WAS_TRUNCATED was added in 8.0.4.

- Error number: MY-011190; Symbol: ER_FIREWALL_RECORDING_STMT_WITHOUT_TEXT; SQLSTATE: HY000
  Message: Statement with no text was not recorded
  ER_FIREWALL_RECORDING_STMT_WITHOUT_TEXT was added in 8.0.4.

- Error number: MY-011191; Symbol: ER_FIREWALL_SUSPICIOUS_STMT; SQLSTATE: HY000
  Message: SUSPICIOUS STATEMENT from '%s'. Reason: %s Statement: %s
  ER_FIREWALL_SUSPICIOUS_STMT was added in 8.0.4.

- Error number: MY-011192; Symbol: ER_FIREWALL_ACCESS_DENIED; SQLSTATE: HY000
  Message: ACCESS DENIED for '%s'. Reason: %s Statement: %s
  ER_FIREWALL_ACCESS_DENIED was added in 8.0.4.

- Error number: MY-011193; Symbol: ER_FIREWALL_SKIPPED_UNKNOWN_USER_MODE; SQLSTATE: HY000
  Message: Skipped unknown user mode '%s'
  ER_FIREWALL_SKIPPED_UNKNOWN_USER_MODE was added in 8.0.4.

- Error number: MY-011194; Symbol: ER_FIREWALL_RELOADING_CACHE; SQLSTATE: HY000
  Message: Reloading cache from disk
  ER_FIREWALL_RELOADING_CACHE was added in 8.0.4.

- Error number: MY-011195; Symbol: ER_FIREWALL_RESET_FOR_USER; SQLSTATE: HY000
  Message:RESET FOR USER
Message: FIREWALL RESET for '%s'

ER_FIREWALL_RESET_FOR_USER was added in 8.0.4.

•   Error number: MY-011196; Symbol: ER_FIREWALL_STATUS_FLUSHED; SQLSTATE: HY000

Message: Counters are reset to zero

ER_FIREWALL_STATUS_FLUSHED was added in 8.0.4.

•   Error number: MY-011197; Symbol: ER_KEYRING_LOGGER_ERROR_MSG; SQLSTATE: HY000

Message: %s

ER_KEYRING_LOGGER_ERROR_MSG was added in 8.0.4.

•   Error number: MY-011198; Symbol: ER_AUDIT_LOG_FILTER_IS_NOT_INSTALLED; SQLSTATE: HY000

Message: Audit Log plugin supports a filtering, which has not been installed yet. Audit Log plugin will run in the legacy mode, which will be disabled in the next release.

ER_AUDIT_LOG_FILTER_IS_NOT_INSTALLED was added in 8.0.4.

•   Error number: MY-011199; Symbol: ER_AUDIT_LOG_SWITCHING_TO_INCLUDE_LIST; SQLSTATE: HY000

Message: Previously exclude list is used, now we start using include list, exclude list is set to NULL.

ER_AUDIT_LOG_SWITCHING_TO_INCLUDE_LIST was added in 8.0.4.

•   Error number: MY-011200; Symbol: ER_AUDIT_LOG_CANNOT_SET_LOG_POLICY_WITH_OTHER_POLICIES; SQLSTATE: HY000

Message: Cannot set audit_log_policy simultaneously with either audit_log_connection_policy or audit_log_statement_policy, setting audit_log_connection_policy and audit_log_statement_policy based on audit_log_policy.

ER_AUDIT_LOG_CANNOT_SET_LOG_POLICY_WITH_OTHER_POLICIES was added in 8.0.4.

•   Error number: MY-011201; Symbol: ER_AUDIT_LOG_ONLY_INCLUDE_LIST_USED; SQLSTATE: HY000

Message: Both include and exclude lists provided, include list is preferred, exclude list is set to NULL.

ER_AUDIT_LOG_ONLY_INCLUDE_LIST_USED was added in 8.0.4.

•   Error number: MY-011202; Symbol: ER_AUDIT_LOG_INDEX_MAP_CANNOT_ACCESS_DIR; SQLSTATE: HY000

Message: Could not access '%s' directory.

ER_AUDIT_LOG_INDEX_MAP_CANNOT_ACCESS_DIR was added in 8.0.4.

•   Error number: MY-011203; Symbol: ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED; SQLSTATE: HY000

Message: Could not rename file from '%s' to '%s'.

ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED was added in 8.0.4.
• Error number: MY-011204; Symbol: ER_AUDIT_LOG_WRITER_DEST_FILE_ALREADY_EXISTS; SQLSTATE: HY000
Message: File '%s' should not exist. It may be incomplete. The server crashed.

ER_AUDIT_LOG_WRITER_DEST_FILE_ALREADY_EXISTS was added in 8.0.4.

• Error number: MY-011205; Symbol: ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED_REMOVE_FILE_MANUALLY; SQLSTATE: HY000
Message: Could not rename file from '%s' to '%s'. Remove the file manually.

ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED_REMOVE_FILE_MANUALLY was added in 8.0.4.

• Error number: MY-011206; Symbol: ER_AUDIT_LOG_WRITER_INCOMPLETE_FILE_RENAMED; SQLSTATE: HY000
Message: Incomplete file renamed from '%s' to '%s'.

ER_AUDIT_LOG_WRITER_INCOMPLETE_FILE_RENAMED was added in 8.0.4.

• Error number: MY-011207; Symbol: ER_AUDIT_LOG_WRITER_FAILED_TO_WRITE_TO_FILE; SQLSTATE: HY000
Message: Error writing file '%s' (errno: %d - %s).

ER_AUDIT_LOG_WRITER_FAILED_TO_WRITE_TO_FILE was added in 8.0.4.

• Error number: MY-011208; Symbol: ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_ENCRYPTION; SQLSTATE: HY000
Message: Could not initialize audit log file encryption.

ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_ENCRYPTION was added in 8.0.4.

• Error number: MY-011209; Symbol: ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_COMPRESSION; SQLSTATE: HY000
Message: Could not initialize audit log file compression.

ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_COMPRESSION was added in 8.0.4.

• Error number: MY-011210; Symbol: ER_AUDIT_LOG_EC_WRITER_FAILED_TO_CREATE_FILE; SQLSTATE: HY000
Message: Could not create '%s' file for audit logging.

ER_AUDIT_LOG_EC_WRITER_FAILED_TO_CREATE_FILE was added in 8.0.4.

• Error number: MY-011211; Symbol: ER_AUDIT_LOG_RENAME_LOG_FILE_BEFORE_FLUSH; SQLSTATE: HY000
Message: Audit log file (%s) must be manually renamed before audit_log_flush is set to true.

ER_AUDIT_LOG_RENAME_LOG_FILE_BEFORE_FLUSH was added in 8.0.4.

• Error number: MY-011212; Symbol: ER_AUDIT_LOG_FILTER_RESULT_MSG; SQLSTATE: HY000
Message: %s

ER_AUDIT_LOG_FILTER_RESULT_MSG was added in 8.0.4.
• Error number: MY-011213; Symbol: ER_AUDIT_LOG_JSON_READER_FAILED_TO_PARSE; SQLSTATE: HY000
  Message: Error parsing JSON event. Event not accessible.
  ER_AUDIT_LOG_JSON_READER_FAILED_TO_PARSE was added in 8.0.4.
• Error number: MY-011214; Symbol: ER_AUDIT_LOG_JSON_READER_BUF_TOO_SMALL; SQLSTATE: HY000
  Message: Buffer is too small to hold JSON event. Number of events skipped: %zu.
  ER_AUDIT_LOG_JSON_READER_BUF_TOO_SMALL was added in 8.0.4.
• Error number: MY-011215; Symbol: ER_AUDIT_LOG_JSON_READER_FAILED_TO_OPEN_FILE; SQLSTATE: HY000
  Message: Could not open JSON file for reading. Reading next file if exists.
  ER_AUDIT_LOG_JSON_READER_FAILED_TO_OPEN_FILE was added in 8.0.4.
• Error number: MY-011216; Symbol: ER_AUDIT_LOG_JSON_READER_FILE_PARSING_ERROR; SQLSTATE: HY000
  Message: JSON file parsing error. Reading next file if exists
  ER_AUDIT_LOG_JSON_READER_FILE_PARSING_ERROR was added in 8.0.4.
• Error number: MY-011217; Symbol: ER_AUDIT_LOG_FILTER_INVALID_COLUMN_COUNT; SQLSTATE: HY000
  Message: Invalid column count in the '%s.%s' table.
  ER_AUDIT_LOG_FILTER_INVALID_COLUMN_COUNT was added in 8.0.4.
• Error number: MY-011218; Symbol: ER_AUDIT_LOG_FILTER_INVALID_COLUMN_DEFINITION; SQLSTATE: HY000
  Message: Invalid column definition of the '%s.%s' table.
  ER_AUDIT_LOG_FILTER_INVALID_COLUMN_DEFINITION was added in 8.0.4.
• Error number: MY-011219; Symbol: ER_AUDIT_LOG_FILTER_FAILED_TO_STORE_TABLE_FLDs; SQLSTATE: HY000
  Message: Could not store field of the %s table.
  ER_AUDIT_LOG_FILTER_FAILED_TO_STORE_TABLE_FLDs was added in 8.0.4.
• Error number: MY-011220; Symbol: ER_AUDIT_LOG_FILTER_FAILED_TO_UPDATE_TABLE; SQLSTATE: HY000
  Message: Could not update %s table.
  ER_AUDIT_LOG_FILTER_FAILED_TO_UPDATE_TABLE was added in 8.0.4.
• Error number: MY-011221; Symbol: ER_AUDIT_LOG_FILTER_FAILED_TO_INSERT_INTO_TABLE; SQLSTATE: HY000
  Message: Could not insert into %s table.
  ER_AUDIT_LOG_FILTER_FAILED_TO_INSERT_INTO_TABLE was added in 8.0.4.
Server Error Message Reference

- Error number: MY-011222; Symbol: ER_AUDIT_LOG_FILTER_FAILED_TO_DELETE_FROM_TABLE; SQLSTATE: HY000
  Message: Could not delete from %s table.
  ER_AUDIT_LOG_FILTER_FAILED_TO_DELETE_FROM_TABLE was added in 8.0.4.

- Error number: MY-011223; Symbol: ER_AUDIT_LOG_FILTER_FAILED_TO_INIT_TABLE_FOR_READ; SQLSTATE: HY000
  Message: Could not initialize %s table for reading.
  ER_AUDIT_LOG_FILTER_FAILED_TO_INIT_TABLE_FOR_READ was added in 8.0.4.

- Error number: MY-011224; Symbol: ER_AUDIT_LOG_FILTER_FAILED_TO_READ_TABLE; SQLSTATE: HY000
  Message: Could not read %s table.
  ER_AUDIT_LOG_FILTER_FAILED_TO_READ_TABLE was added in 8.0.4.

- Error number: MY-011225; Symbol: ER_AUDIT_LOG_FILTER_FAILED_TO_CLOSE_TABLE_AFTER_READING; SQLSTATE: HY000
  Message: Could not close %s table reading.
  ER_AUDIT_LOG_FILTER_FAILED_TO_CLOSE_TABLE_AFTER_READING was added in 8.0.4.

- Error number: MY-011226; Symbol: ER_AUDIT_LOG_FILTER_USER_AND_HOST_CANNOT_BE_EMPTY; SQLSTATE: HY000
  Message: Both user and host columns of %s table cannot be empty.
  ER_AUDIT_LOG_FILTER_USER_AND_HOST_CANNOT_BE_EMPTY was added in 8.0.4.

- Error number: MY-011227; Symbol: ER_AUDIT_LOG_FILTER_FLD_FILTERNAME_CANNOT_BE_EMPTY; SQLSTATE: HY000
  Message: Filtername column of %s table cannot be empty.
  ER_AUDIT_LOG_FILTER_FLD_FILTERNAME_CANNOT_BE_EMPTY was added in 8.0.4.

- Error number: MY-011228; Symbol: ER_VALIDATE_PWD_DICT_FILE_NOT_SPECIFIED; SQLSTATE: HY000
  Message: Dictionary file not specified
  ER_VALIDATE_PWD_DICT_FILE_NOT_SPECIFIED was added in 8.0.4.

- Error number: MY-011229; Symbol: ER_VALIDATE_PWD_DICT_FILE_NOT_LOADED; SQLSTATE: HY000
  Message: Dictionary file not loaded
  ER_VALIDATE_PWD_DICT_FILE_NOT_LOADED was added in 8.0.4.

- Error number: MY-011230; Symbol: ER_VALIDATE_PWD_DICT_FILE_TOO_BIG; SQLSTATE: HY000
  Message: Dictionary file size exceeded MAX_DICTIONARY_FILE_LENGTH, not loaded
  ER_VALIDATE_PWD_DICT_FILE_TOO_BIG was added in 8.0.4.
•   Error number: MY-011231; Symbol: ER_VALIDATE_PWD_FAILED_TO_READ_DICT_FILE; SQLSTATE: HY000
  Message: Exception while reading the dictionary file
  ER_VALIDATE_PWD_FAILED_TO_READ_DICT_FILE was added in 8.0.4.

•   Error number: MY-011232; Symbol: ER_VALIDATE_PWD_FAILED_TO_GET_FLD_FROM_SECURITY_CTX; SQLSTATE: HY000
  Message: Can't retrieve the %s from the security context
  ER_VALIDATE_PWD_FAILED_TO_GET_FLD_FROM_SECURITY_CTX was added in 8.0.4.

•   Error number: MY-011233; Symbol: ER_VALIDATE_PWD_FAILED_TO_GET_SECURITY_CTX; SQLSTATE: HY000
  Message: Can't retrieve the security context
  ER_VALIDATE_PWD_FAILED_TO_GET_SECURITY_CTX was added in 8.0.4.

•   Error number: MY-011234; Symbol: ER_VALIDATE_PWD_LENGTH_CHANGED; SQLSTATE: HY000
  Message: Effective value of validate_password_length is changed. New value is %d
  ER_VALIDATE_PWD_LENGTH_CHANGED was added in 8.0.4.

•   Error number: MY-011235; Symbol: ER_REWRITER_QUERY_ERROR_MSG; SQLSTATE: HY000
  Message: %s
  ER_REWRITER_QUERY_ERROR_MSG was added in 8.0.4.

•   Error number: MY-011236; Symbol: ER_REWRITER_QUERY_FAILED; SQLSTATE: HY000
  Message: Rewritten query failed to parse:%s
  ER_REWRITER_QUERY_FAILED was added in 8.0.4.

•   Error number: MY-011237; Symbol: ER_XPLUGIN_STARTUP_FAILED; SQLSTATE: HY000
  Message: Startup failed with error "%s"
  ER_XPLUGIN_STARTUP_FAILED was added in 8.0.4.

•   Error number: MY-011238; Symbol: ER_XPLUGIN_SERVER_EXITING; SQLSTATE: HY000
  Message: Exiting
  ER_XPLUGIN_SERVER_EXITING was added in 8.0.4, removed after 8.0.12.

•   Error number: MY-011239; Symbol: ER_XPLUGIN_SERVER_EXITED; SQLSTATE: HY000
  Message: Exit done
  ER_XPLUGIN_SERVER_EXITED was added in 8.0.4, removed after 8.0.12.

•   Error number: MY-011240; Symbol: ER_XPLUGIN_USING_SSL_CONF_FROM_SERVER; SQLSTATE: HY000
  Message: Using SSL configuration from MySQL Server
  ER_XPLUGIN_USING_SSL_CONF_FROM_SERVER was added in 8.0.4.
Server Error Message Reference

- **Error number:** MY-011241; **Symbol:** ER_XPLUGIN_USING_SSL_CONF_FROM_MYSQLX; **SQLSTATE:** HY000

  Message: Using SSL configuration from Mysqlx Plugin

  ER_XPLUGIN_USING_SSL_CONF_FROM_MYSQLX was added in 8.0.4.

- **Error number:** MY-011242; **Symbol:** ER_XPLUGIN_FAILED_TO_USE_SSL_CONF; **SQLSTATE:** HY000

  Message: Neither MySQL Server nor Mysqlx Plugin has valid SSL configuration

  ER_XPLUGIN_FAILED_TO_USE_SSL_CONF was added in 8.0.4.

- **Error number:** MY-011243; **Symbol:** ER_XPLUGIN_USING_SSL_FOR_TLS_CONNECTION; **SQLSTATE:** HY000

  Message: Using %s for TLS connections

  ER_XPLUGIN_USING_SSL_FOR_TLS_CONNECTION was added in 8.0.4.

- **Error number:** MY-011244; **Symbol:** ER_XPLUGIN_REFERENCE_TO_SECURE_CONN_WITH_XPLUGIN; **SQLSTATE:** HY000

  Message: For more information, please see the Using Secure Connections with X Plugin section in the MySQL documentation

  ER_XPLUGIN_REFERENCE_TO_SECURE_CONN_WITH_XPLUGIN was added in 8.0.4.

- **Error number:** MY-011245; **Symbol:** ER_XPLUGIN_ERROR_MSG; **SQLSTATE:** HY000

  Message: %s

  ER_XPLUGIN_ERROR_MSG was added in 8.0.4.

- **Error number:** MY-011246; **Symbol:** ER_SHA_PWD_FAILED_TO_PARSE_AUTH_STRING; **SQLSTATE:** HY000

  Message: Failed to parse stored authentication string for %s. Please check if mysql.user table not corrupted

  ER_SHA_PWD_FAILED_TO_PARSE_AUTH_STRING was added in 8.0.4.

- **Error number:** MY-011247; **Symbol:** ER_SHA_PWD_FAILED_TO_GENERATE_MULTI_ROUND_HASH; **SQLSTATE:** HY000

  Message: Error in generating multi-round hash for %s. Plugin can not perform authentication without it. This may be a transient problem

  ER_SHA_PWD_FAILED_TO_GENERATE_MULTI_ROUND_HASH was added in 8.0.4.

- **Error number:** MY-011248; **Symbol:** ER_SHA_PWD_AUTHQUIRES_RSA_OR_SSL; **SQLSTATE:** HY000

  Message: Authentication requires either RSA keys or SSL encryption

  ER_SHA_PWD_AUTHQUIRES_RSA_OR_SSL was added in 8.0.4.

- **Error number:** MY-011249; **Symbol:** ER_SHA_PWD_RSA_KEY_TOO_LONG; **SQLSTATE:** HY000

  Message: RSA key cipher length of %u is too long. Max value is %u

  ER_SHA_PWD_RSA_KEY_TOO_LONG was added in 8.0.4.
• Error number: MY-011250; Symbol: ER_PLUGIN_COMMON_FAILED_TO_OPEN_FILTER_TABLES; SQLSTATE: HY000

Message: Failed to open the %s filter tables

ER_PLUGIN_COMMON_FAILED_TO_OPEN_FILTER_TABLES was added in 8.0.4.

• Error number: MY-011251; Symbol: ER_PLUGIN_COMMON_FAILED_TO_OPEN_TABLE; SQLSTATE: HY000

Message: Failed to open '%s.%s' %s table

ER_PLUGIN_COMMON_FAILED_TO_OPEN_TABLE was added in 8.0.4.

• Error number: MY-011252; Symbol: ER_AUTH_LDAP_ERROR_LOGGER_ERROR_MSG; SQLSTATE: HY000

Message: %s

ER_AUTH_LDAP_ERROR_LOGGER_ERROR_MSG was added in 8.0.4.

• Error number: MY-011253; Symbol: ER_CONN_CONTROL_ERROR_MSG; SQLSTATE: HY000

Message: %s

ER_CONN_CONTROL_ERROR_MSG was added in 8.0.4.

• Error number: MY-011254; Symbol: ER_GRP_RPL_ERROR_MSG; SQLSTATE: HY000

Message: %s

ER_GRP_RPL_ERROR_MSG was added in 8.0.4.

• Error number: MY-011255; Symbol: ER_SHA_PWD_SALT_FOR_USER_CORRUPT; SQLSTATE: HY000

Message: Password salt for user '%s' is corrupt

ER_SHA_PWD_SALT_FOR_USER_CORRUPT was added in 8.0.4.

• Error number: MY-011256; Symbol: ER_SYS_VAR_COMPONENT_OOM; SQLSTATE: HY000

Message: Out of memory for component system variable '%s';

ER_SYS_VAR_COMPONENT_OOM was added in 8.0.4.

• Error number: MY-011257; Symbol: ER_SYS_VAR_COMPONENT_VARIABLE_SET_READ_ONLY; SQLSTATE: HY000

Message: variable %s of component %s was forced to be read-only: string variable without update_func and PLUGIN_VAR_MEMALLOC flag.

ER_SYS_VAR_COMPONENT_VARIABLE_SET_READ_ONLY was added in 8.0.4.

• Error number: MY-011258; Symbol: ER_SYS_VAR_COMPONENT_UNKNOWN_VARIABLE_TYPE; SQLSTATE: HY000

Message: Unknown variable type code 0x%x in component '%s'.

ER_SYS_VAR_COMPONENT_UNKNOWN_VARIABLE_TYPE was added in 8.0.4.

• Error number: MY-011259; Symbol: ER_SYS_VAR_COMPONENT_FAILED_TO_PARSE_VARIABLE_OPTIONS; SQLSTATE: HY000
Message: Parsing options for variable '%s' failed.

**ER_SYS_VAR_COMPONENT FAILED TO_PARSE_VARIABLE_OPTIONS** was added in 8.0.4.

- **Error number:** MY-011260; **Symbol:** ER_SYS_VAR_COMPONENT FAILED TO_MAKE_VARIABLE_PERSISTENT; **SQLSTATE:** HY000
  Message: Setting persistent options for component variable '%s' failed.

**ER_SYS_VAR_COMPONENT FAILED TO_MAKE_VARIABLE_PERSISTENT** was added in 8.0.4.

- **Error number:** MY-011261; **Symbol:** ER_COMPONENT_FILTER_CONFUSED; **SQLSTATE:** HY000
  Message: The log-filter component "%s" got confused at "%s" (state: %s) ...

**ER_COMPONENT_FILTER_CONFUSED** was added in 8.0.4.

- **Error number:** MY-011262; **Symbol:** ER_STOP_SLAVE_IO_THREAD_DISK_SPACE; **SQLSTATE:** HY000
  Message: Waiting until I/O thread for channel '%s' finish writing to disk before stopping. Free some disk space or use 'KILL' to abort I/O thread operation. Notice that aborting the I/O thread while rotating the relay log might corrupt the relay logs, requiring a server restart to fix it.

**ER_STOP_SLAVE_IO_THREAD_DISK_SPACE** was added in 8.0.2.

- **Error number:** MY-011263; **Symbol:** ER_LOG_FILE_CANNOT_OPEN; **SQLSTATE:** HY000
  Message: Could not use %s for logging (error %d - %s). Turning logging off for the server process. To turn it on again: fix the cause, then %s restart the MySQL server.

**ER_LOG_FILE_CANNOT_OPEN** was added in 8.0.2.

- **Error number:** MY-011268; **Symbol:** ER_PERSIST_OPTION_STATUS; **SQLSTATE:** HY000
  Message: Configuring persisted options failed: "%s".

**ER_PERSIST_OPTION_STATUS** was added in 8.0.11.

- **Error number:** MY-011269; **Symbol:** ER_NOT_IMPLEMENTED_GET_TABLESPACE_STATISTICS; **SQLSTATE:** HY000
  Message: The storage engine '%s' does not provide dynamic table statistics

**ER_NOT_IMPLEMENTED_GET_TABLESPACE_STATISTICS** was added in 8.0.11.

- **Error number:** MY-011272; **Symbol:** ER_SSL_FIPS_MODE_ERROR; **SQLSTATE:** HY000
  Message: SSL fips mode error: %s

**ER_SSL_FIPS_MODE_ERROR** was added in 8.0.11.

- **Error number:** MY-011273; **Symbol:** ER_CONN_INIT_CONNECT_IGNORED; **SQLSTATE:** HY000
  Message: init_connect variable is ignored for user: %s host: %s due to expired password.

**ER_CONN_INIT_CONNECT_IGNORED** was added in 8.0.11.

- **Error number:** MY-011275; **Symbol:** ER_REWRITER_OOM; **SQLSTATE:** HY000
  Message: Out of memory.

**ER_REWRITER_OOM** was added in 8.0.11.
• Error number: MY-011276; Symbol: ER_REWRITER_TABLE_MALFORMED_ERROR; SQLSTATE: HY000
  Message: Wrong column count or names when loading rules.
  ER_REWRITER_TABLE_MALFORMED_ERROR was added in 8.0.11.

• Error number: MY-011277; Symbol: ER_REWRITER_LOAD_FAILED; SQLSTATE: HY000
  Message: Some rules failed to load.
  ER_REWRITER_LOAD_FAILED was added in 8.0.11.

• Error number: MY-011278; Symbol: ER_REWRITER_READ_FAILED; SQLSTATE: HY000
  Message: Got error from storage engine while refreshing rewrite rules.
  ER_REWRITER_READ_FAILED was added in 8.0.11.

• Error number: MY-011279; Symbol: ER_CONN_CONTROL_EVENT_COORDINATOR_INIT_FAILED; SQLSTATE: HY000
  Message: Failed to initialize Connection_event_coordinator
  ER_CONN_CONTROL_EVENT_COORDINATOR_INIT FAILED was added in 8.0.11.

• Error number: MY-011280; Symbol: ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_UPDATE_FAILED; SQLSTATE: HY000
  Message: Failed to update connection delay triggered stats
  ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_UPDATE_FAILED was added in 8.0.11.

• Error number: MY-011281; Symbol: ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_RESET_FAILED; SQLSTATE: HY000
  Message: Failed to reset connection delay triggered stats
  ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_RESET_FAILED was added in 8.0.11.

• Error number: MY-011282; Symbol: ER_CONN_CONTROL_INVALID_CONN_DELAY_TYPE; SQLSTATE: HY000
  Message: Unexpected option type for connection delay.
  ER_CONN_CONTROL_INVALID_CONN_DELAY_TYPE was added in 8.0.11.

• Error number: MY-011283; Symbol: ER_CONN_CONTROL_DELAY_ACTION_INIT_FAILED; SQLSTATE: HY000
  Message: Failed to initialize Connection_delay_action
  ER_CONN_CONTROL_DELAY_ACTION_INIT FAILED was added in 8.0.11.

• Error number: MY-011284; Symbol: ER_CONN_CONTROL_FAILED_TO_SET_CONN_DELAY; SQLSTATE: HY000
  Message: Could not set %s delay for connection delay.
  ER_CONN_CONTROL_FAILED_TO_SET_CONN_DELAY was added in 8.0.11.

• Error number: MY-011285; Symbol: ER_CONN_CONTROL_FAILED_TO_UPDATE_CONN_DELAY_HASH; SQLSTATE: HY000
Message: Failed to update connection delay hash for account: %s

ER_CONN_CONTROL_FAILED_TO_UPDATE_CONN_DELAY_HASH was added in 8.0.11.

- Error number: MY-011286; Symbol: ER_XPLUGIN_FORCE_STOP_CLIENT; SQLSTATE: HY000
Message: %s: Force stopping client because exception occurred: %s

ER_XPLUGIN_FORCE_STOP_CLIENT was added in 8.0.11.

- Error number: MY-011287; Symbol: ER_XPLUGIN_MAX_AUTH_ATTEMPTS_REACHED; SQLSTATE: HY000
Message: %s,%u: Maximum number of authentication attempts reached, login failed.

ER_XPLUGIN_MAX_AUTH_ATTEMPTS_REACHED was added in 8.0.11.

- Error number: MY-011288; Symbol: ER_XPLUGIN_BUFFER_PAGE_ALLOC_FAILED; SQLSTATE: HY000
Message: Error allocating Buffer_page: %s

ER_XPLUGIN_BUFFER_PAGE_ALLOC_FAILED was added in 8.0.11.

- Error number: MY-011289; Symbol: ER_XPLUGIN_DETECTED_HANGING_CLIENTS; SQLSTATE: HY000
Message: Detected %u hanging client(s)

ER_XPLUGIN_DETECTED_HANGING_CLIENTS was added in 8.0.11.

- Error number: MY-011290; Symbol: ER_XPLUGIN_FAILED_TO_ACCEPT_CLIENT; SQLSTATE: HY000
Message: Error accepting client

ER_XPLUGIN_FAILED_TO_ACCEPT_CLIENT was added in 8.0.11.

- Error number: MY-011291; Symbol: ER_XPLUGIN_FAILED_TO_SCHEDULE_CLIENT; SQLSTATE: HY000
Message: Internal error scheduling client for execution

ER_XPLUGIN_FAILED_TO_SCHEDULE_CLIENT was added in 8.0.11.

- Error number: MY-011292; Symbol: ER_XPLUGIN_FAILED_TO_PREPARE_IO_INTERFACES; SQLSTATE: HY000
Message: Preparation of I/O interfaces failed, X Protocol won't be accessible

ER_XPLUGIN_FAILED_TO_PREPARE_IO_INTERFACES was added in 8.0.11.

- Error number: MY-011293; Symbol: ER_XPLUGIN_SRV_SESSION_INIT_THREAD_FAILED; SQLSTATE: HY000
Message: srv_session_init_thread returned error

ER_XPLUGIN_SRV_SESSION_INIT_THREAD_FAILED was added in 8.0.11.
• Error number: MY-011294; Symbol: ER_XPLUGIN_UNABLE_TO_USE_USER_SESSION_ACCOUNT; SQLSTATE: HY000

Message: Unable to use user mysql.session account when connecting the server for internal plugin requests.

ER_XPLUGIN_UNABLE_TO_USE_USER_SESSION_ACCOUNT was added in 8.0.11.

• Error number: MY-011295; Symbol: ER_XPLUGIN_REFERENCE_TO_USER_ACCOUNT_DOC_SECTION; SQLSTATE: HY000

Message: For more information, please see the X Plugin User Account section in the MySQL documentation.

ER_XPLUGIN_REFERENCE_TO_USER_ACCOUNT_DOC_SECTION was added in 8.0.11.

• Error number: MY-011296; Symbol: ER_XPLUGIN_UNEXPECTED_EXCEPTION_DISPATCHING_CMD; SQLSTATE: HY000

Message: %%s: Unexpected exception dispatching command: %%s

ER_XPLUGIN_UNEXPECTED_EXCEPTION_DISPATCHING_CMD was added in 8.0.11.

• Error number: MY-011297; Symbol: ER_XPLUGIN_EXCEPTION_IN_TASK_SCHEDULER; SQLSTATE: HY000

Message: Exception in post: %%s

ER_XPLUGIN_EXCEPTION_IN_TASK_SCHEDULER was added in 8.0.11.

• Error number: MY-011298; Symbol: ER_XPLUGIN_TASK_SCHEDULING_FAILED; SQLSTATE: HY000

Message: Internal error scheduling task

ER_XPLUGIN_TASK_SCHEDULING_FAILED was added in 8.0.11.

• Error number: MY-011299; Symbol: ER_XPLUGIN_EXCEPTION_IN_EVENT_LOOP; SQLSTATE: HY000

Message: Exception in event loop: "%%s": %%s

ER_XPLUGIN_EXCEPTION_IN_EVENT_LOOP was added in 8.0.11.

• Error number: MY-011300; Symbol: ER_XPLUGIN_LISTENER_SETUP_FAILED; SQLSTATE: HY000

Message: Setup of %s failed, %s

ER_XPLUGIN_LISTENER_SETUP_FAILED was added in 8.0.11.

• Error number: MY-011301; Symbol: ER_XPLUING_NET_STARTUP_FAILED; SQLSTATE: HY000

Message: %s

ER_XPLUING_NET_STARTUP_FAILED was added in 8.0.11.

• Error number: MY-011302; Symbol: ER_XPLUGIN_FAILED_AT_SSL_CONF; SQLSTATE: HY000

Message: Failed at SSL configuration: "%%s"

ER_XPLUGIN_FAILED_AT_SSL_CONF was added in 8.0.11.
• Error number: MY-011303; Symbol: ER_XPLUGIN_CLIENT_SSL_HANDSHAKE_FAILED; SQLSTATE: HY000

Message: Error during SSL handshake for client connection (%i)

ER_XPLUGIN_CLIENT_SSL_HANDSHAKE_FAILED was added in 8.0.11, removed after 8.0.12.

• Error number: MY-011304; Symbol: ER_XPLUGIN_SSL_HANDSHAKE_WITH_SERVER_FAILED; SQLSTATE: HY000

Message: %s: Error during SSL handshake

ER_XPLUGIN_SSL_HANDSHAKE_WITH_SERVER_FAILED was added in 8.0.11, removed after 8.0.12.

• Error number: MY-011305; Symbol: ER_XPLUGIN_FAILED_TO_CREATE_SESSION_FOR_CONN; SQLSTATE: HY000

Message: %s: Error creating session for connection from %s

ER_XPLUGIN_FAILED_TO_CREATE_SESSION_FOR_CONN was added in 8.0.11.

• Error number: MY-011306; Symbol: ER_XPLUGIN_FAILED_TO_INITIALIZE_SESSION; SQLSTATE: HY000

Message: %s: Error initializing session for connection: %s

ER_XPLUGIN_FAILED_TO_INITIALIZE_SESSION was added in 8.0.11.

• Error number: MY-011307; Symbol: ER_XPLUGIN_MESSAGE_TOO_LONG; SQLSTATE: HY000

Message: %s: Message of size %u received, exceeding the limit of %i

ER_XPLUGIN_MESSAGE_TOO_LONG was added in 8.0.11.

• Error number: MY-011308; Symbol: ER_XPLUGIN_UNINITIALIZED_MESSAGE; SQLSTATE: HY000

Message: Message is not properly initialized: %s

ER_XPLUGIN_UNINITIALIZED_MESSAGE was added in 8.0.11.

• Error number: MY-011309; Symbol: ER_XPLUGIN_FAILED_TO_SET_MIN_NUMBER_OF_WORKERS; SQLSTATE: HY000

Message: Unable to set minimal number of workers to %u; actual value is %i

ER_XPLUGIN_FAILED_TO_SET_MIN_NUMBER_OF_WORKERS was added in 8.0.11.

• Error number: MY-011310; Symbol: ER_XPLUGIN_UNABLE_TO_ACCEPT_CONNECTION; SQLSTATE: HY000

Message: Unable to accept connection, disconnecting client

ER_XPLUGIN_UNABLE_TO_ACCEPT_CONNECTION was added in 8.0.11.

• Error number: MY-011311; Symbol: ER_XPLUGIN_ALL_IO_INTERFACES_DISABLED; SQLSTATE: HY000

Message: All I/O interfaces are disabled, X Protocol won't be accessible

ER_XPLUGIN_ALL_IO_INTERFACES_DISABLED was added in 8.0.11.
• Error number: MY-011312; Symbol: ER_XPLUGIN_INVALID_MSG_DURING_CLIENT_INIT; SQLSTATE: HY000
Message: %s: Invalid message %i received during client initialization
ER_XPLUGIN_INVALID_MSG_DURING_CLIENT_INIT was added in 8.0.11, removed after 8.0.12.

• Error number: MY-011313; Symbol: ER_XPLUGIN_CLOSING_CLIENTS_ON_SHUTDOWN; SQLSTATE: HY000
Message: %s: closing client because of shutdown (state: %i)
ER_XPLUGIN_CLOSING_CLIENTS_ON_SHUTDOWN was added in 8.0.11, removed after 8.0.12.

• Error number: MY-011314; Symbol: ER_XPLUGIN_ERROR_READING_SOCKET; SQLSTATE: HY000
Message: %s: Error reading from socket %s (%i)
ER_XPLUGIN_ERROR_READING_SOCKET was added in 8.0.11.

• Error number: MY-011315; Symbol: ER_XPLUGIN_PEER_DISCONNECTED_WHILE_READING_MSG_BODY; SQLSTATE: HY000
Message: %s: peer disconnected while reading message body
ER_XPLUGIN_PEER_DISCONNECTED_WHILE_READING_MSG_BODY was added in 8.0.11.

• Error number: MY-011316; Symbol: ER_XPLUGIN_READ_FAILED_CLOSING_CONNECTION; SQLSTATE: HY000
Message: client_id:%s - %s while reading from socket, closing connection
ER_XPLUGIN_READ_FAILED_CLOSING_CONNECTION was added in 8.0.11.

• Error number: MY-011317; Symbol: ER_XPLUGIN_INVALID_AUTH_METHOD; SQLSTATE: HY000
Message: %s.%u: Invalid authentication method %s
ER_XPLUGIN_INVALID_AUTH_METHOD was added in 8.0.11, removed after 8.0.12.

• Error number: MY-011318; Symbol: ER_XPLUGIN_UNEXPECTED_MSG_DURING_AUTHENTICATION; SQLSTATE: HY000
Message: %s: Unexpected message of type %i received during authentication
ER_XPLUGIN_UNEXPECTED_MSG_DURING_AUTHENTICATION was added in 8.0.11, removed after 8.0.12.

• Error number: MY-011319; Symbol: ER_XPLUGIN_ERROR_WRITING_TO_CLIENT; SQLSTATE: HY000
Message: Error writing to client: %s (%i)
ER_XPLUGIN_ERROR_WRITING_TO_CLIENT was added in 8.0.11, removed after 8.0.12.

• Error number: MY-011320; Symbol: ER_XPLUGIN_SCHEDULER_STARTED; SQLSTATE: HY000
Message: Scheduler "%s" started.
ER_XPLUGIN_SCHEDULER_STARTED was added in 8.0.11, removed after 8.0.12.

• Error number: MY-011321; Symbol: ER_XPLUGIN_SCHEDULER_STOPPED; SQLSTATE: HY000
Message: Scheduler "%s" stopped.

ER_XPLUGIN_SCHEDULER_STOPPED was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011322; Symbol: ER_XPLUGIN_LISTENER_SYS_VARIABLE_ERROR; SQLSTATE: HY000
  Message: Please see the MySQL documentation for "%s" system variables to fix the error
  ER_XPLUGIN_LISTENER_SYS_VARIABLE_ERROR was added in 8.0.11.

- Error number: MY-011323; Symbol: ER_XPLUGIN_LISTENER_STATUS_MSG; SQLSTATE: HY000
  Message: X Plugin ready for connections. %s
  ER_XPLUGIN_LISTENER_STATUS_MSG was added in 8.0.11.

- Error number: MY-011324; Symbol: ER_XPLUGIN_RETRYING_BIND_ON_PORT; SQLSTATE: HY000
  Message: Retrying `bind()` on TCP/IP port %i
  ER_XPLUGIN_RETRYING_BIND_ON_PORT was added in 8.0.11.

- Error number: MY-011325; Symbol: ER_XPLUGIN_SHUTDOWN_TRIGGERED; SQLSTATE: HY000
  Message: Shutdown triggered by mysqld abort flag
  ER_XPLUGIN_SHUTDOWN_TRIGGERED was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011326; Symbol: ER_XPLUGIN_USER_ACCOUNT_WITH_ALL_PERMISSIONS; SQLSTATE: HY000
  Message: Using %s account for authentication which has all required permissions
  ER_XPLUGIN_USER_ACCOUNT_WITH_ALL_PERMISSIONS was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011327; Symbol: ER_XPLUGIN_EXISTING_USER_ACCOUNT_WITH_INCOMPLETE_GRANTS; SQLSTATE: HY000
  Message: Using existing %s account for authentication. Incomplete grants will be fixed
  ER_XPLUGIN_EXISTING_USER_ACCOUNT_WITH_INCOMPLETE_GRANTS was added in 8.0.11.

- Error number: MY-011328; Symbol: ER_XPLUGIN_SERVER_STARTS_HANDLING_CONNECTIONS; SQLSTATE: HY000
  Message: Server starts handling incoming connections
  ER_XPLUGIN_SERVER_STARTS_HANDLING_CONNECTIONS was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011329; Symbol: ER_XPLUGIN_SERVER_STOPPED_HANDLING_CONNECTIONS; SQLSTATE: HY000
  Message: Stopped handling incoming connections
  ER_XPLUGIN_SERVER_STOPPED_HANDLING_CONNECTIONS was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011330; Symbol: ER_XPLUGIN_FAILED_TO_INTERRUPT_SESSION; SQLSTATE: HY000
Message: %s: Could not interrupt client session

ER_XPLUGIN_FAILED_TO_INTERRUPT_SESSION was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011331; Symbol: ER_XPLUGIN_CLIENT_RELEASE_TRIGGERED; SQLSTATE: HY000

Message: %s: release triggered by timeout in state: %i

ER_XPLUGIN_CLIENT_RELEASE_TRIGGERED was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011332; Symbol: ER_XPLUGIN_IPv6_AVAILABLE; SQLSTATE: HY000

Message: IPv6 is available

ER_XPLUGIN_IPv6_AVAILABLE was added in 8.0.11.

- Error number: MY-011333; Symbol: ER_XPLUGIN_UNIX_SOCKET_NOT_CONFIGURED; SQLSTATE: HY000

Message: UNIX socket not configured

ER_XPLUGIN_UNIX_SOCKET_NOT_CONFIGURED was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011334; Symbol: ER_XPLUGIN_CLIENT_KILL_MSG; SQLSTATE: HY000

Message: Kill client: %i %s

ER_XPLUGIN_CLIENT_KILL_MSG was added in 8.0.11.

- Error number: MY-011335; Symbol: ER_XPLUGIN_FAILED_TO_GET_SECURITY_CTX; SQLSTATE: HY000

Message: Could not get security context for session

ER_XPLUGIN_FAILED_TO_GET_SECURITY_CTX was added in 8.0.11.

- Error number: MY-011336; Symbol: ER_XPLUGIN_FAILED_TO_SWITCH_SECURITY_CTX_TO_ROOT; SQLSTATE: HY000

Message: Unable to switch security context to root

ER_XPLUGIN_FAILED_TO_SWITCH_SECURITY_CTX_TO_ROOT was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011337; Symbol: ER_XPLUGIN_FAILED_TO_CLOSE_SQL_SESSION; SQLSTATE: HY000

Message: Error closing SQL session

ER_XPLUGIN_FAILED_TO_CLOSE_SQL_SESSION was added in 8.0.11.

- Error number: MY-011338; Symbol: ER_XPLUGIN_FAILED_TO_EXECUTE_ADMIN_CMD; SQLSTATE: HY000

Message: Error executing admin command %s: %s

ER_XPLUGIN_FAILED_TO_EXECUTE_ADMIN_CMD was added in 8.0.11.

- Error number: MY-011339; Symbol: ER_XPLUGIN_EMPTY_ADMIN_CMD; SQLSTATE: HY000

Message: Error executing empty admin command
ER_XPLUGIN_EMPTY_ADMIN_CMD was added in 8.0.11.

• Error number: MY-011340; Symbol: ER_XPLUGIN_FAILED_TO_GET_SYS_VAR; SQLSTATE: HY000
  Message: Unable to retrieve system variable '\%s\'

ER_XPLUGIN_FAILED_TO_GET_SYS_VAR was added in 8.0.11.

• Error number: MY-011341; Symbol: ER_XPLUGIN_FAILED_TO_GET_CREATION_STMT; SQLSTATE: HY000
  Message: Unable to get creation stmt for collection '\%s\'; query result size: %lu

ER_XPLUGIN_FAILED_TO_GET_CREATION_STMT was added in 8.0.11.

• Error number: MY-011342; Symbol: ER_XPLUGIN_FAILED_TO_GET_ENGINE_INFO; SQLSTATE: HY000
  Message: Unable to get engine info for collection '\%s\'; creation stmt: %s

ER_XPLUGIN_FAILED_TO_GET_ENGINE_INFO was added in 8.0.11.

• Error number: MY-011343; Symbol: ER_XPLUGIN_FAIL_TO_GET_RESULT_DATA; SQLSTATE: HY000
  Message: Error getting result data: %s

ER_XPLUGIN_FAIL_TO_GET_RESULT_DATA was added in 8.0.11, removed after 8.0.12.

• Error number: MY-011344; Symbol: ER_XPLUGIN_CAPABILITY_EXPIRED_PASSWORD; SQLSTATE: HY000
  Message: Capability expired password failed with error: %s

ER_XPLUGIN_CAPABILITY_EXPIRED_PASSWORD was added in 8.0.11, removed after 8.0.12.

• Error number: MY-011345; Symbol: ER_XPLUGIN_FAILED_TO_SET_SO_REUSEADDR_FLAG; SQLSTATE: HY000
  Message: Failed to set SO_REUSEADDR flag (error: %d).

ER_XPLUGIN_FAILED_TO_SET_SO_REUSEADDR_FLAG was added in 8.0.11.

• Error number: MY-011346; Symbol: ER_XPLUGIN_FAILED_TO_OPEN_INTERNAL_SESSION; SQLSTATE: HY000
  Message: Could not open internal MySQL session

ER_XPLUGIN_FAILED_TO_OPEN_INTERNAL_SESSION was added in 8.0.11.

• Error number: MY-011347; Symbol: ER_XPLUGIN_FAILED_TO_SWITCH_CONTEXT; SQLSTATE: HY000
  Message: Unable to switch context to user %s

ER_XPLUGIN_FAILED_TO_SWITCH_CONTEXT was added in 8.0.11.

• Error number: MY-011348; Symbol: ER_XPLUGIN_FAILED_TO_UNREGISTER_UDF; SQLSTATE: HY000
  Message: Can\'t unregister '\%s\' user defined function
Server Error Message Reference

ER_XPLUGIN_FAILED_TO_UNREGISTER_UDF was added in 8.0.11.

- Error number: MY-011349; Symbol: ER_XPLUGIN_GET_PEER_ADDRESS_FAILED; SQLSTATE: HY000
  Message: %s: get peer address failed, can't resolve IP to hostname

ER_XPLUGIN_GET_PEER_ADDRESS_FAILED was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011350; Symbol: ER_XPLUGIN_CAPABILITY_CLIENT_INTERACTIVE_FAILED; SQLSTATE: HY000
  Message: Capability client interactive failed with error: %s

ER_XPLUGIN_CAPABILITY_CLIENT_INTERACTIVE_FAILED was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011351; Symbol: ER_XPLUGIN_FAILED_TO_RESET_IPV6_V6ONLY_FLAG; SQLSTATE: HY000
  Message: Failed to reset IPV6_V6ONLY flag (error: %d). The server will listen to IPv6 addresses only.

ER_XPLUGIN_FAILED_TO_RESET_IPV6_V6ONLY_FLAG was added in 8.0.11.

- Error number: MY-011352; Symbol: ER_KEYRING_INVALID_KEY_TYPE; SQLSTATE: HY000
  Message: Invalid key type

ER_KEYRING_INVALID_KEY_TYPE was added in 8.0.11.

- Error number: MY-011353; Symbol: ER_KEYRING_INVALID_KEY_LENGTH; SQLSTATE: HY000
  Message: Invalid key length for given block cipher

ER_KEYRING_INVALID_KEY_LENGTH was added in 8.0.11.

- Error number: MY-011354; Symbol: ER_KEYRING_FAILED_TO_CREATE_KEYRING_DIR; SQLSTATE: HY000
  Message: Could not create keyring directory. The keyring_file will stay unusable until correct path to the keyring directory gets provided

ER_KEYRING_FAILED_TO_CREATE_KEYRING_DIR was added in 8.0.11.

- Error number: MY-011355; Symbol: ER_KEYRING_FILE_INIT_FAILED; SQLSTATE: HY000
  Message: keyring_file initialization failure. Please check if the keyring_file_data points to readable keyring file or keyring file can be created in the specified location. The keyring_file will stay unusable until correct path to the keyring file gets provided

ER_KEYRING_FILE_INIT_FAILED was added in 8.0.11.

- Error number: MY-011356; Symbol: ER_KEYRING_INTERNAL_EXCEPTION_FAILED_FILE_INIT; SQLSTATE: HY000
  Message: keyring_file initialization failure due to internal exception inside the plugin.

ER_KEYRING_INTERNAL_EXCEPTION_FAILED_FILE_INIT was added in 8.0.11.

- Error number: MY-011357; Symbol: ER_KEYRING_FAILED_TO_GENERATE_KEY; SQLSTATE: HY000
Message: Failed to generate a key due to internal exception inside keyring_file plugin

**ER_KEYRING_FAILED_TO_GENERATE_KEY** was added in 8.0.11.

- **Error number:** MY-011358; Symbol: **ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_INVALID_KEY**; SQLSTATE: HY000

Message: Error while %s key: invalid key_type

**ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_INVALID_KEY** was added in 8.0.11.

- **Error number:** MY-011359; Symbol: **ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_EMPTY_KEY_ID**; SQLSTATE: HY000

Message: Error while %s key: key_id cannot be empty

**ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_EMPTY_KEY_ID** was added in 8.0.11.

- **Error number:** MY-011360; Symbol: **ER_KEYRING_OPERATION_FAILED_DUE_TO_INTERNAL_ERROR**; SQLSTATE: HY000

Message: Failed to %s due to internal exception inside %s plugin

**ER_KEYRING_OPERATION_FAILED_DUE_TO_INTERNAL_ERROR** was added in 8.0.11.

- **Error number:** MY-011361; Symbol: **ER_KEYRING_INCORRECT_FILE**; SQLSTATE: HY000

Message: Incorrect Keyring file

**ER_KEYRING_INCORRECT_FILE** was added in 8.0.11.

- **Error number:** MY-011362; Symbol: **ER_KEYRING_FOUND_MALFORMED_BACKUP_FILE**; SQLSTATE: HY000

Message: Found malformed keyring backup file - removing it

**ER_KEYRING_FOUND_MALFORMED_BACKUP_FILE** was added in 8.0.11.

- **Error number:** MY-011363; Symbol: **ER_KEYRING_FAILED_TO_RESTORE_FROM_BACKUP_FILE**; SQLSTATE: HY000

Message: Error while restoring keyring from backup file cannot overwrite keyring with backup

**ER_KEYRING_FAILED_TO_RESTORE_FROM_BACKUP_FILE** was added in 8.0.11.

- **Error number:** MY-011364; Symbol: **ER_KEYRING_FAILED_TO_FLUSH_KEYRING_TO_FILE**; SQLSTATE: HY000

Message: Error while flushing in-memory keyring into keyring file

**ER_KEYRING_FAILED_TO_FLUSH_KEYRING_TO_FILE** was added in 8.0.11.

- **Error number:** MY-011365; Symbol: **ER_KEYRING_FAILED_TO_GET_FILE_STAT**; SQLSTATE: HY000

Message: Error while reading stat for %s. Please check if file %s was not removed. OS returned this error: %s

**ER_KEYRING_FAILED_TO_GET_FILE_STAT** was added in 8.0.11.

- **Error number:** MY-011366; Symbol: **ER_KEYRING_FAILED_TO_REMOVE_FILE**; SQLSTATE: HY000
Message: Could not remove file %s OS retuned this error: %s

ER_KEYRING_FAILED_TO_REMOVE_FILE was added in 8.0.11.

- Error number: MY-011367; Symbol: ER_KEYRING_FAILED_TO_TRUNCATE_FILE; SQLSTATE: HY000

Message: Could not truncate file %s. OS retuned this error: %s

ER_KEYRING_FAILED_TO_TRUNCATE_FILE was added in 8.0.11.

- Error number: MY-011368; Symbol: ER_KEYRING_UNKNOWN_ERROR; SQLSTATE: HY000

Message: Unknown error %d

ER_KEYRING_UNKNOWN_ERROR was added in 8.0.11.

- Error number: MY-011369; Symbol: ER_KEYRING_FAILED_TO_SET_KEYRING_FILE_DATA; SQLSTATE: HY000

Message: keyring_file_data cannot be set to new value as the keyring file cannot be created/ accessed in the provided path

ER_KEYRING_FAILED_TO_SET_KEYRING_FILE_DATA was added in 8.0.11.

- Error number: MY-011370; Symbol: ER_KEYRING_FILE_IO_ERROR; SQLSTATE: HY000

Message: %s

ER_KEYRING_FILE_IO_ERROR was added in 8.0.11.

- Error number: MY-011371; Symbol: ER_KEYRING_FAILED_TO_LOAD_KEYRING_CONTENT; SQLSTATE: HY000

Message: Error while loading keyring content. The keyring might be malformed

ER_KEYRING_FAILED_TO_LOAD_KEYRING_CONTENT was added in 8.0.11.

- Error number: MY-011372; Symbol: ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING; SQLSTATE: HY000

Message: Could not flush keys to keyring

ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING was added in 8.0.11.

- Error number: MY-011373; Symbol: ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING_BACKUP; SQLSTATE: HY000

Message: Could not flush keys to keyring's backup

ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING_BACKUP was added in 8.0.11.

- Error number: MY-011374; Symbol: ER_KEYRING_KEY_FETCH_FAILED_DUE_TO_EMPTY_KEY_ID; SQLSTATE: HY000

Message: Error while fetching key: key_id cannot be empty

ER_KEYRING_KEY_FETCH_FAILED_DUE_TO_EMPTY_KEY_ID was added in 8.0.11.

- Error number: MY-011375; Symbol: ER_KEYRING_FAILED_TO_REMOVE_KEY_DUE_TO_EMPTY_ID; SQLSTATE: HY000

Message: Error while removing key: key_id cannot be empty
Server Error Message Reference

**ER_KEYRING_FAILED_TO_REMOVE_KEY_DUE_TO_EMPTY_ID** was added in 8.0.11.

- Error number: **MY-011376**; Symbol: **ER_KEYRING_OKV_INCORRECT_KEY_VAULT_CONFIGURED**; SQLSTATE: **HY000**
  
  Message: For keyring_okv to be initialized, please point keyring_okv_conf_dir variable to a directory with Oracle Key Vault configuration file and ssl materials

**ER_KEYRING_OKV_INCORRECT_KEY_VAULT_CONFIGURED** was added in 8.0.11.

- Error number: **MY-011377**; Symbol: **ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INCORRECT_CONF**; SQLSTATE: **HY000**
  
  Message: keyring_okv initialization failure. Please check that the keyring_okv_conf_dir points to a readable directory and that the directory contains Oracle Key Vault configuration file and ssl materials. Please also check that Oracle Key Vault is up and running.

**ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INCORRECT_CONF** was added in 8.0.11.

- Error number: **MY-011378**; Symbol: **ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INTERNAL_ERROR**; SQLSTATE: **HY000**
  
  Message: keyring_okv initialization failure due to internal exception inside the plugin

**ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INTERNAL_ERROR** was added in 8.0.11.

  Message: Invalid key length for given block cipher

**ER_KEYRING_OKV_INVALID_KEY_LENGTH_FOR_CIPHER** was added in 8.0.11.

- Error number: **MY-011381**; Symbol: **ER_KEYRING_OKV_FAILED_TO_GENERATE_KEY_DUE_TO_INTERNAL_ERROR**; SQLSTATE: **HY000**
  
  Message: Failed to generate a key due to internal exception inside keyring_okv plugin

**ER_KEYRING_OKV_FAILED_TO_GENERATE_KEY_DUE_TO_INTERNAL_ERROR** was added in 8.0.11.

- Error number: **MY-011382**; Symbol: **ER_KEYRING_OKV_FAILED_TO_FIND_SERVER_ENTRY**; SQLSTATE: **HY000**
  
  Message: Could not find entry for server in configuration file %s

**ER_KEYRING_OKV_FAILED_TO_FIND_SERVER_ENTRY** was added in 8.0.11.

- Error number: **MY-011383**; Symbol: **ER_KEYRING_OKV_FAILED_TO_FIND_STANDBY_SERVER_ENTRY**; SQLSTATE: **HY000**
  
  Message: Could not find entry for standby server in configuration file %s

**ER_KEYRING_OKV_FAILED_TO_FIND_STANDBY_SERVER_ENTRY** was added in 8.0.11.
• Error number: MY-011384; Symbol: ER_KEYRING_OKV_FAILED_TO_PARSE_CONF_FILE; SQLSTATE: HY000

Message: Could not parse the %s file provided

ER_KEYRING_OKV_FAILED_TO_PARSE_CONF_FILE was added in 8.0.11.

• Error number: MY-011385; Symbol: ER_KEYRING_OKV_FAILED_TO_LOAD_KEY_UID; SQLSTATE: HY000

Message: Could not load keys' uids from the OKV server

ER_KEYRING_OKV_FAILED_TO_LOAD_KEY_UID was added in 8.0.11.

• Error number: MY-011386; Symbol: ER_KEYRING_OKV_FAILED_TO_INIT_SSL_LAYER; SQLSTATE: HY000

Message: Could not initialize ssl layer

ER_KEYRING_OKV_FAILED_TO_INIT_SSL_LAYER was added in 8.0.11.

• Error number: MY-011387; Symbol: ER_KEYRING_OKV_FAILED_TO_INIT_CLIENT; SQLSTATE: HY000

Message: Could not initialize OKV client

ER_KEYRING_OKV_FAILED_TO_INIT_CLIENT was added in 8.0.11.

• Error number: MY-011388; Symbol: ER_KEYRING_OKV_CONNECTION_TO_SERVER_FAILED; SQLSTATE: HY000

Message: Could not connect to the OKV server

ER_KEYRING_OKV_CONNECTION_TO_SERVER_FAILED was added in 8.0.11.

• Error number: MY-011389; Symbol: ER_KEYRING_OKV_FAILED_TO_REMOVE_KEY; SQLSTATE: HY000

Message: Could not remove the key

ER_KEYRING_OKV_FAILED_TO_REMOVE_KEY was added in 8.0.11.

• Error number: MY-011390; Symbol: ER_KEYRING_OKV_FAILED_TO_ADD_ATTRIBUTE; SQLSTATE: HY000

Message: Could not add attribute, attribute_name=%s attribute value=%s

ER_KEYRING_OKV_FAILED_TO_ADD_ATTRIBUTE was added in 8.0.11.

• Error number: MY-011391; Symbol: ER_KEYRING_OKV_FAILED_TO_GENERATE_KEY; SQLSTATE: HY000

Message: Could not generate the key.

ER_KEYRING_OKV_FAILED_TO_GENERATE_KEY was added in 8.0.11.

• Error number: MY-011392; Symbol: ER_KEYRING_OKV_FAILED_TO_STORE_KEY; SQLSTATE: HY000

Message: Could not store the key.

ER_KEYRING_OKV_FAILED_TO_STORE_KEY was added in 8.0.11.
Server Error Message Reference

• Error number: MY-011393; Symbol: ER_KEYRING_OKV_FAILED_TO_ACTIVATE_KEYS; SQLSTATE: HY000
  Message: Could not activate the key.
  ER_KEYRING_OKV_FAILED_TO_ACTIVATE_KEYS was added in 8.0.11.

• Error number: MY-011394; Symbol: ER_KEYRING_OKV_FAILED_TO_FETCH_KEY; SQLSTATE: HY000
  Message: Could not fetch generated key
  ER_KEYRING_OKV_FAILED_TO_FETCH_KEY was added in 8.0.11.

• Error number: MY-011395; Symbol: ER_KEYRING_OKV_FAILED_TO_STORE_OR_GENERATE_KEY; SQLSTATE: HY000
  Message: Could not store/generate the key - failed to set key attribute x-key-ready
  ER_KEYRING_OKV_FAILED_TO_STORE_OR_GENERATE_KEY was added in 8.0.11.

  Message: Private key does not match the certificate public key
  ER_KEYRING_OKV_KEY_MISMATCH was added in 8.0.11.

• Error number: MY-011402; Symbol: ER_KEYRING_ENCRYPTED_FILE_INCORRECT_KEYRING_FILE; SQLSTATE: HY000
Message: Incorrect Keyring file

ER_KEYRING_ENCRYPTED_FILE_INCORRECT_KEYRING_FILE was added in 8.0.11.

- Error number: MY-011403; Symbol: ER_KEYRING_ENCRYPTED_FILE_DECRIPTION_FAILED; SQLSTATE: HY000

ER_KEYRING_ENCRYPTED_FILE_DECRIPTION_FAILED was added in 8.0.11.

- Error number: MY-011404; Symbol: ER_KEYRING_ENCRYPTED_FILE_FOUND_MALFORMED_BACKUP_FILE; SQLSTATE: HY000

Message: Found malformed keyring backup file - removing it

ER_KEYRING_ENCRYPTED_FILE_FOUND_MALFORMED_BACKUP_FILE was added in 8.0.11.

- Error number: MY-011405; Symbol: ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_RESTORE_KEYRING; SQLSTATE: HY000

Message: Error while restoring keyring from backup file cannot overwrite keyring with backup

ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_RESTORE_KEYRING was added in 8.0.11.

- Error number: MY-011406; Symbol: ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_FLUSH_KEYRING; SQLSTATE: HY000

Message: Error while flushing in-memory keyring into keyring file

ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_FLUSH_KEYRING was added in 8.0.11.

- Error number: MY-011407; Symbol: ER_KEYRING_ENCRYPTED_FILE_ENCRYPTION_FAILED; SQLSTATE: HY000

ER_KEYRING_ENCRYPTED_FILE_ENCRYPTION_FAILED was added in 8.0.11.

- Error number: MY-011408; Symbol: ER_KEYRING_ENCRYPTED_FILE_INVALID_KEYRING_DIR; SQLSTATE: HY000

Message: keyring_encrypted_file_data cannot be set to new value as the keyring file cannot be created/accessed in the provided path

ER_KEYRING_ENCRYPTED_FILE_INVALID_KEYRING_DIR was added in 8.0.11.

- Error number: MY-011409; Symbol: ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_CREATE_KEYRING_DIR; SQLSTATE: HY000

Message: Could not create keyring directory The keyring_encrypted_file will stay unusable until correct path to the keyring directory gets provided

ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_CREATE_KEYRING_DIR was added in 8.0.11.
• Error number: MY-011410; Symbol: ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_INVALID; SQLSTATE: HY000

Message: The keyring_encrypted_file_password must be set to a valid value.

ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_INVALID was added in 8.0.11.

• Error number: MY-011411; Symbol: ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_TOO_LONG; SQLSTATE: HY000

Message: Too long keyring_encrypted_file_password value.

ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_TOO_LONG was added in 8.0.11.

• Error number: MY-011412; Symbol: ER_KEYRING_ENCRYPTED_FILE_INIT_FAILURE; SQLSTATE: HY000

Message: keyring_encrypted_file initialization failure. Please check if the keyring_encrypted_file_data points to readable keyring file or keyring file can be created in the specified location or password to decrypt keyring file is correct.

ER_KEYRING_ENCRYPTED_FILE_INIT_FAILURE was added in 8.0.11.

• Error number: MY-011413; Symbol: ER_KEYRING_ENCRYPTED_FILE_INIT_FAILED_DUE_TO_INTERNAL_ERROR; SQLSTATE: HY000

Message: keyring_encrypted_file initialization failure due to internal exception inside the plugin

ER_KEYRING_ENCRYPTED_FILE_INIT_FAILED_DUE_TO_INTERNAL_ERROR was added in 8.0.11.

• Error number: MY-011414; Symbol: ER_KEYRING_ENCRYPTED_FILE_GEN_KEY_FAILED_DUE_TO_INTERNAL_ERROR; SQLSTATE: HY000

Message: Failed to generate a key due to internal exception inside keyring_encrypted_file plugin

ER_KEYRING_ENCRYPTED_FILE_GEN_KEY_FAILED_DUE_TO_INTERNAL_ERROR was added in 8.0.11.

• Error number: MY-011415; Symbol: ER_KEYRING_AWS_FAILED_TO_SET_CMK_ID; SQLSTATE: HY000

Message: keyring_aws_cmk_id cannot be set to the new value as AWS KMS seems to not understand the id provided. Please check that CMK id provided is correct.

ER_KEYRING_AWS_FAILED_TO_SET_CMK_ID was added in 8.0.11.

• Error number: MY-011416; Symbol: ER_KEYRING_AWS_FAILED_TO_SET_REGION; SQLSTATE: HY000

Message: keyring_aws_region cannot be set to the new value as AWS KMS seems to not understand the region provided. Please check that region provided is correct.

ER_KEYRING_AWS_FAILED_TO_SET_REGION was added in 8.0.11.

• Error number: MY-011417; Symbol: ER_KEYRING_AWS_FAILED_TO_OPEN_CONF_FILE; SQLSTATE: HY000

Message: Could not open keyring_aws configuration file: %s. OS returned this error: %s

ER_KEYRING_AWS_FAILED_TO_OPEN_CONF_FILE was added in 8.0.11.
Server Error Message Reference

- Error number: MY-011418; Symbol: ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_ID_FROM_CONF_FILE; SQLSTATE: HY000
  Message: Could not read AWS access key id from keyring_aws configuration file: %s. OS returned this error: %s
  ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_ID_FROM_CONF_FILE was added in 8.0.11.

- Error number: MY-011419; Symbol: ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_FROM_CONF_FILE; SQLSTATE: HY000
  Message: Could not read AWS access key from keyring_aws configuration file: %s. OS returned this error: %s
  ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_FROM_CONF_FILE was added in 8.0.11.

- Error number: MY-011420; Symbol: ER_KEYRING_AWS_INVALID_CONF_FILE_PATH; SQLSTATE: HY000
  Message: Path to keyring aws configuration file cannot be empty
  ER_KEYRING_AWS_INVALID_CONF_FILE_PATH was added in 8.0.11.

- Error number: MY-011421; Symbol: ER_KEYRING_AWS_INVALID_DATA_FILE_PATH; SQLSTATE: HY000
  Message: Path to keyring_aws storage file cannot be empty.
  ER_KEYRING_AWS_INVALID_DATA_FILE_PATH was added in 8.0.11.

- Error number: MY-011422; Symbol: ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DIR; SQLSTATE: HY000
  Message: Unable to create/access keyring directory.
  ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DIR was added in 8.0.11.

- Error number: MY-011423; Symbol: ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DATA_FILE; SQLSTATE: HY000
  Message: Unable to create/access keyring_aws storage file. Please check if keyring_aws_data_file points to location where keyring file can be created/accessed. Please also make sure that MySQL server's user has high enough privileges to access this location.
  ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DATA_FILE was added in 8.0.11.

- Error number: MY-011424; Symbol: ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_INTERNAL_ERROR; SQLSTATE: HY000
  Message: keyring_aws initialization failed due to internal error when initializing synchronization primitive - %s. OS returned this error: %s:
  ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_INTERNAL_ERROR was added in 8.0.11.

- Error number: MY-011425; Symbol: ER_KEYRING_AWS_FAILED_TO_ACCESS_DATA_FILE; SQLSTATE: HY000
  Message: Could not access keyring_aws storage file in the path provided. Please check if the keyring_aws directory can be accessed by MySQL Server.
  ER_KEYRING_AWS_FAILED_TO_ACCESS_DATA_FILE was added in 8.0.11.
• Error number: MY-011426; Symbol: ER_KEYRING_AWS_CMK_ID_NOT_SET; SQLSTATE: HY000
Message: keyring_aws_cmk_id has to be set
ER_KEYRING_AWS_CMK_ID_NOT_SET was added in 8.0.11.

• Error number: MY-011427; Symbol: ER_KEYRING_AWS_FAILED_TO_GET_KMS_CREDENTIAL_FROM_CONF_FILE; SQLSTATE: HY000
Message: Could not get AWS KMS credentials from the configuration file
ER_KEYRING_AWS_FAILED_TO_GET_KMS_CREDENTIAL_FROM_CONF_FILE was added in 8.0.11.

• Error number: MY-011428; Symbol: ER_KEYRING_AWS_INIT_FAILURE; SQLSTATE: HY000
Message: keyring_aws initialization failure.
ER_KEYRING_AWS_INIT_FAILURE was added in 8.0.11.

• Error number: MY-011429; Symbol: ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_PLUGIN_INTERNAL_ERROR; SQLSTATE: HY000
Message: keyring_aws initialization failure due to internal exception inside the plugin
ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_PLUGIN_INTERNAL_ERROR was added in 8.0.11.

• Error number: MY-011430; Symbol: ER_KEYRING_AWS_INVALID_KEY_LENGTH_FOR_CIPHER; SQLSTATE: HY000
Message: Invalid key length for given block cipher
ER_KEYRING_AWS_INVALID_KEY_LENGTH_FOR_CIPHER was added in 8.0.11.

• Error number: MY-011431; Symbol: ER_KEYRING_AWS_FAILED_TO_GENERATE_KEY_DUE_TO_INTERNAL_ERROR; SQLSTATE: HY000
Message: Failed to generate a key due to internal exception inside keyring_file plugin
ER_KEYRING_AWS_FAILED_TO_GENERATE_KEY_DUE_TO_INTERNAL_ERROR was added in 8.0.11.

• Error number: MY-011432; Symbol: ER_KEYRING_AWS_INVALID_KEY_LENGTH_FOR_CIPHER; SQLSTATE: HY000
Message: Invalid key length for given block cipher
ER_KEYRING_AWS_INVALID_KEY_LENGTH_FOR_CIPHER was added in 8.0.11.

• Error number: MY-011433; Symbol: ER_KEYRING_AWS_FOUND_MALFORMED_BACKUP_FILE; SQLSTATE: HY000
Message: Found malformed keyring backup file - removing it
ER_KEYRING_AWS_FOUND_MALFORMED_BACKUP_FILE was added in 8.0.11.

• Error number: MY-011434; Symbol: ER_KEYRING_AWS_FAILED_TO_RESTORE_FROM_BACKUP_FILE; SQLSTATE: HY000
Message: Error while restoring keyring from backup file cannot overwrite keyring with backup
ER_KEYRING_AWS_FAILED_TO_RESTORE_FROM_BACKUP_FILE was added in 8.0.11.

• Error number: MY-011435; Symbol: ER_KEYRING_AWS_FAILED_TO_FLUSH_KEYRING_TO_FILE; SQLSTATE: HY000
Server Error Message Reference

Message: Error while flushing in-memory keyring into keyring file

ER_KEYRING_AWS_FAILED_TO_FLUSH_KEYRING_TO_FILE was added in 8.0.11.

- Error number: MY-011436; Symbol: ER_KEYRING_AWS_INCORRECT_REGION; SQLSTATE: HY000
  Message: Wrong region

ER_KEYRING_AWS_INCORRECT_REGION was added in 8.0.11.

- Error number: MY-011437; Symbol: ER_KEYRING_AWS_FAILED_TO_CONNECT_KMS; SQLSTATE: HY000
  Message: Could not connect to AWS KMS with the credentials provided. Please make sure they are correct. AWS KMS returned this error: %s

ER_KEYRING_AWS_FAILED_TO_CONNECT_KMS was added in 8.0.11.

- Error number: MY-011438; Symbol: ER_KEYRING_AWS_FAILED_TO_GENERATE_NEW_KEY; SQLSTATE: HY000
  Message: Could not generate a new key. AWS KMS returned this error: %s

ER_KEYRING_AWS_FAILED_TO_GENERATE_NEW_KEY was added in 8.0.11.

- Error number: MY-011439; Symbol: ER_KEYRING_AWS_FAILED_TO_ENCRYPT_KEY; SQLSTATE: HY000
  Message: Could not encrypt key. AWS KMS returned this error: %s

ER_KEYRING_AWS_FAILED_TO_ENCRYPT_KEY was added in 8.0.11.

- Error number: MY-011440; Symbol: ER_KEYRING_AWS_FAILED_TO_RE_ENCRYPT_KEY; SQLSTATE: HY000
  Message: Could not re-encrypt key. AWS KMS returned this error: %s

ER_KEYRING_AWS_FAILED_TO_RE_ENCRYPT_KEY was added in 8.0.11.

- Error number: MY-011441; Symbol: ER_KEYRING_AWS_FAILED_TO_DECRYPT_KEY; SQLSTATE: HY000
  Message: Could not decrypt key. AWS KMS returned this error: %s

ER_KEYRING_AWS_FAILED_TO_DECRYPT_KEY was added in 8.0.11.

- Error number: MY-011442; Symbol: ER_KEYRING_AWS_FAILED_TO_ROTATE_CMK; SQLSTATE: HY000
  Message: Could not rotate the CMK. AWS KMS returned this error: %s

ER_KEYRING_AWS_FAILED_TO_ROTATE_CMK was added in 8.0.11.

- Error number: MY-011443; Symbol: ER_GRP_RPL_GTID_ALREADY_USED; SQLSTATE: HY000
  Message: The requested GTID '%s:%lld' was already used, the transaction will rollback.

ER_GRP_RPL_GTID_ALREADY_USED was added in 8.0.11.

- Error number: MY-011444; Symbol: ER_GRP_RPL_APPLIER_THD_KILLED; SQLSTATE: HY000
  Message: The group replication applier thread was killed.
ER_GRP_RPL_APPLIER_THD_KILLED was added in 8.0.11.

- Error number: MY-011445; Symbol: ER_GRP_RPL_EVENT_HANDLING_ERROR; SQLSTATE: HY000
  
  Message: Error at event handling! Got error: %d.

ER_GRP_RPL_EVENT_HANDLING_ERROR was added in 8.0.11.

- Error number: MY-011446; Symbol: ER_GRP_RPL_ERROR_GTID_EXECUTION_INFO; SQLSTATE: HY000
  
  Message: Error when extracting group GTID execution information, some recovery operations may face future issues.

ER_GRP_RPL_ERROR_GTID_EXECUTION_INFO was added in 8.0.11.

- Error number: MY-011447; Symbol: ER_GRP_RPL_CERTIFICATE_SIZE_ERROR; SQLSTATE: HY000
  
  Message: An error occurred when trying to reduce the Certification information size for transmission.

ER_GRP_RPL_CERTIFICATE_SIZE_ERROR was added in 8.0.11.

- Error number: MY-011448; Symbol: ER_GRP_RPL_CREATE_APPLIER_CACHE_ERROR; SQLSTATE: HY000
  
  Message: Failed to create group replication pipeline applier cache!

ER_GRP_RPL_CREATE_APPLIER_CACHE_ERROR was added in 8.0.11.

- Error number: MY-011449; Symbol: ER_GRP_RPL_UNBLOCK_WAITING_THD; SQLSTATE: HY000
  
  Message: Unblocking the group replication thread waiting for applier to start, as the start group replication was killed.

ER_GRP_RPL_UNBLOCK_WAITING_THD was added in 8.0.11.

- Error number: MY-011450; Symbol: ER_GRP_RPL_APPLIER_PIPELINE_NOT_DISPOSED; SQLSTATE: HY000
  
  Message: The group replication applier pipeline was not properly disposed. Check the error log for further info.

ER_GRP_RPL_APPLIER_PIPELINE_NOT_DISPOSED was added in 8.0.11.

- Error number: MY-011451; Symbol: ER_GRP_RPL_APPLIER_THD_EXECUTION_ABORTED; SQLSTATE: HY000
  
  Message: The applier thread execution was aborted. Unable to process more transactions, this member will now leave the group.

ER_GRP_RPL_APPLIER_THD_EXECUTION_ABORTED was added in 8.0.11.

- Error number: MY-011452; Symbol: ER_GRP_RPL_APPLIER_EXECUTION_FATAL_ERROR; SQLSTATE: HY000
  
  Message: Fatal error during execution on the Applier process of Group Replication. The server will now leave the group.

ER_GRP_RPL_APPLIER_EXECUTION_FATAL_ERROR was added in 8.0.11.
Server Error Message Reference

- Error number: MY-011453; Symbol: ER_GRP_RPL_ERROR_STOPPING_CHANNELS; SQLSTATE: HY000
  
  Message: Error stopping all replication channels while server was leaving the group. %s
  
  ER_GRP_RPL_ERROR_STOPPING_CHANNELS was added in 8.0.11.

- Error number: MY-011454; Symbol: ER_GRP_RPL_ERROR_SENDING_SINGLE_PRIMARY_MSSG; SQLSTATE: HY000
  
  Message: Error sending single primary message informing that primary did apply relay logs.
  
  ER_GRP_RPL_ERROR_SENDING_SINGLE_PRIMARY_MSSG was added in 8.0.11.

- Error number: MY-011455; Symbol: ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_VER_ERROR; SQLSTATE: HY000
  
  Message: Error updating transaction snapshot version after transaction being positively certified.
  
  ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_VER_ERROR was added in 8.0.11.

- Error number: MY-011456; Symbol: ER_GRP_RPL_SIDNO_FETCH_ERROR; SQLSTATE: HY000
  
  Message: Error fetching transaction sidno after transaction being positively certified.
  
  ER_GRP_RPL_SIDNO_FETCH_ERROR was added in 8.0.11.

- Error number: MY-011457; Symbol: ER_GRP_RPL_BROADCAST_COMMIT_TRANS_MSSG_FAILED; SQLSTATE: HY000
  
  Message: Broadcast of committed transactions message failed.
  
  ER_GRP_RPL_BROADCAST_COMMIT_TRANS_MSSG_FAILED was added in 8.0.11.

- Error number: MY-011458; Symbol: ER_GRP_RPL_GROUP_NAME_PARSE_ERROR; SQLSTATE: HY000
  
  Message: Unable to parse the group name during the Certification module initialization.
  
  ER_GRP_RPL_GROUP_NAME_PARSE_ERROR was added in 8.0.11.

- Error number: MY-011459; Symbol: ER_GRP_RPL_ADD_GRPSID_TO_GRPGTIDSID_MAP_ERROR; SQLSTATE: HY000
  
  Message: Unable to add the group_sid in the group_gtid_sid_map during the Certification module initialization.
  
  ER_GRP_RPL_ADD_GRPSID_TO_GRPGTIDSID_MAP_ERROR was added in 8.0.11.

- Error number: MY-011460; Symbol: ER_GRP_RPL_UPDATE_GRPGTID_EXECUTED_ERROR; SQLSTATE: HY000
  
  Message: Error updating group_gtid_executed GITD set during the Certification module initialization.
  
  ER_GRP_RPL_UPDATE_GRPGTID_EXECUTED_ERROR was added in 8.0.11.

- Error number: MY-011461; Symbol: ER_GRP_RPL_DONOR_TRANS_INFO_ERROR; SQLSTATE: HY000
  
  Message: Unable to handle the donor's transaction information when initializing the conflict detection component. Possible out of memory error.
  
  ER_GRP_RPL_DONOR_TRANS_INFO_ERROR was added in 8.0.11.
Server Error Message Reference

- **Error number:** MY-011462; Symbol: ER_GRP_RPL_SERVER_CONN_ERROR; SQLSTATE: HY000
  
  Message: Error when establishing a server connection during the Certification module initialization.
  
  ER_GRP_RPL_SERVER_CONN_ERROR was added in 8.0.11.

- **Error number:** MY-011463; Symbol: ER_GRP_RPL_ERROR_FETCHING_GTID_EXECUTED_SET; SQLSTATE: HY000
  
  Message: Error when extracting this member GTID executed set. Certification module can't be properly initialized.
  
  ER_GRP_RPL_ERROR_FETCHING_GTID_EXECUTED_SET was added in 8.0.11.

- **Error number:** MY-011464; Symbol: ER_GRP_RPL_ADD_GTID_TO_GRP_GTID_EXECUTED_ERROR; SQLSTATE: HY000
  
  Message: Error while adding the server GTID EXECUTED set to the group_gtid_execute during the Certification module initialization.
  
  ER_GRP_RPL_ADD_GTID_TO_GRP_GTID_EXECUTED_ERROR was added in 8.0.11.

- **Error number:** MY-011465; Symbol: ER_GRP_RPL_ERROR_FETCHING_GTID_SET; SQLSTATE: HY000
  
  Message: Error when extracting this member retrieved set for its applier. Certification module can't be properly initialized.
  
  ER_GRP_RPL_ERROR_FETCHING_GTID_SET was added in 8.0.11.

- **Error number:** MY-011466; Symbol: ER_GRP_RPL_ADD_RETRIEVED_SET_TO_GRP_GTID_EXECUTED_ERROR; SQLSTATE: HY000
  
  Message: Error while adding the member retrieved set to the group_gtid_executed during the Certification module initialization.
  
  ER_GRP_RPL_ADD_RETRIEVED_SET_TO_GRP_GTID_EXECUTED_ERROR was added in 8.0.11.

- **Error number:** MY-011467; Symbol: ER_GRP_RPL_CERTIFICATION_INITIALIZATION_FAILURE; SQLSTATE: HY000
  
  Message: Error during Certification module initialization.
  
  ER_GRP_RPL_CERTIFICATION_INITIALIZATION_FAILURE was added in 8.0.11.

- **Error number:** MY-011468; Symbol: ER_GRP_RPL_UPDATE_LAST_CONFLICT_FREE_TRANS_ERROR; SQLSTATE: HY000
  
  Message: Unable to update last conflict free transaction, this transaction will not be tracked on performance_schema.replication_group_member_stats.last_conflict_free_transaction.
  
  ER_GRP_RPL_UPDATE_LAST_CONFLICT_FREE_TRANS_ERROR was added in 8.0.11.

- **Error number:** MY-011469; Symbol: ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_REF_VER_ERROR; SQLSTATE: HY000
  
  Message: Error updating transaction snapshot version reference for internal storage.
  
  ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_REF_VER_ERROR was added in 8.0.11.
• Error number: MY-011470; Symbol: ER_GRP_RPL_FETCH_TRANS_SIDNO_ERROR; SQLSTATE: HY000
Message: Error fetching transaction sidno while adding to the group_gtid_executed set.
ER_GRP_RPL_FETCH_TRANS_SIDNO_ERROR was added in 8.0.11.

• Error number: MY-011471; Symbol: ER_GRP_RPL_ERROR_VERIFYING_SIDNO; SQLSTATE: HY000
Message: Error while ensuring the sidno be present in the group_gtid_executed.
ER_GRP_RPL_ERROR_VERIFYING_SIDNO was added in 8.0.11.

• Error number: MY-011472; Symbol: ER_GRP_RPL_CANT_GENERATE_GTID; SQLSTATE: HY000
Message: Impossible to generate Global Transaction Identifier: the integer component reached the maximal value. Restart the group with a new group_replication_group_name.
ER_GRP_RPL_CANT_GENERATE_GTID was added in 8.0.11.

• Error number: MY-011473; Symbol: ER_GRP_RPL_INVALID_GTID_SET; SQLSTATE: HY000
Message: Invalid stable transactions set.
ER_GRP_RPL_INVALID_GTID_SET was added in 8.0.11.

• Error number: MY-011474; Symbol: ER_GRP_RPL_UPDATE_GTID_SET_ERROR; SQLSTATE: HY000
Message: Error updating stable transactions set.
ER_GRP_RPL_UPDATE_GTID_SET_ERROR was added in 8.0.11.

• Error number: MY-011475; Symbol: ER_GRP_RPL_RECEIVED_SET_MISSING_GTIDS; SQLSTATE: HY000
Message: There was an error when filling the missing GTIDs on the applier channel received set. Despite not critical, on the long run this may cause performance issues.
ER_GRP_RPL_RECEIVED_SET_MISSING_GTIDS was added in 8.0.11.

• Error number: MY-011476; Symbol: ER_GRP_RPL_SKIP_COMPUTATION_TRANS_COMMITTED; SQLSTATE: HY000
Message: Skipping the computation of the Transactions_committed_all_members field as an older instance of this computation is still ongoing.
ER_GRP_RPL_SKIP_COMPUTATION_TRANS_COMMITTED was added in 8.0.11.

• Error number: MY-011477; Symbol: ER_GRP_RPL_NULL_PACKET; SQLSTATE: HY000
Message: Null packet on certifier’s queue.
ER_GRP_RPL_NULL_PACKET was added in 8.0.11.

• Error number: MY-011478; Symbol: ER_GRP_RPL_CANT_READ_GTID; SQLSTATE: HY000
Message: Error reading GTIDs from the message.
ER_GRP_RPL_CANT_READ_GTID was added in 8.0.11.

• Error number: MY-011479; Symbol: ER_GRP_RPL_PROCESS_GTID_SET_ERROR; SQLSTATE: HY000
Server Error Message Reference

Message: Error processing stable transactions set.

`ER_GRP_RPL_PROCESS_GTID_SET_ERROR` was added in 8.0.11.

- **Error number:** `MY-011480`; **Symbol:** `ER_GRP_RPL_PROCESS_INTERSECTION_GTID_SET_ERROR`; **SQLSTATE:** `HY000`

Message: Error processing intersection of stable transactions set.

`ER_GRP_RPL_PROCESS_INTERSECTION_GTID_SET_ERROR` was added in 8.0.11.

- **Error number:** `MY-011481`; **Symbol:** `ER_GRP_RPL_SET_STABLE_TRANS_ERROR`; **SQLSTATE:** `HY000`

Message: Error setting stable transactions set.

`ER_GRP_RPL_SET_STABLE_TRANS_ERROR` was added in 8.0.11.

- **Error number:** `MY-011482`; **Symbol:** `ER_GRP_RPL_CANT_READ_GRP_GTID_EXTRACTED`; **SQLSTATE:** `HY000`

Message: Error reading group_gtid_extracted from the View_change_log_event.

`ER_GRP_RPL_CANT_READ_GRP_GTID_EXTRACTED` was added in 8.0.11.

- **Error number:** `MY-011483`; **Symbol:** `ER_GRP_RPL_CANT_READ_WRITE_SET_ITEM`; **SQLSTATE:** `HY000`

Message: Error reading the write set item '%s' from the View_change_log_event.

`ER_GRP_RPL_CANT_READ_WRITE_SET_ITEM` was added in 8.0.11.

- **Error number:** `MY-011484`; **Symbol:** `ER_GRP_RPL_INIT_CERTIFICATION_INFO_FAILURE`; **SQLSTATE:** `HY000`

Message: Error during certification_info initialization.

`ER_GRP_RPL_INIT_CERTIFICATION_INFO_FAILURE` was added in 8.0.11.

- **Error number:** `MY-011485`; **Symbol:** `ER_GRP_RPL_CONFLICT_DETECTION_DISABLED`; **SQLSTATE:** `HY000`

Message: Primary had applied all relay logs, disabled conflict detection.

`ER_GRP_RPL_CONFLICT_DETECTION_DISABLED` was added in 8.0.11.

- **Error number:** `MY-011486`; **Symbol:** `ER_GRP_RPL_MSG_DISCARDED`; **SQLSTATE:** `HY000`

Message: Message received while the plugin is not ready, message discarded.

`ER_GRP_RPL_MSG_DISCARDED` was added in 8.0.11.

- **Error number:** `MY-011487`; **Symbol:** `ER_GRP_RPL_MISSING_GRP_RPL_APPLIER`; **SQLSTATE:** `HY000`

Message: Message received without a proper group replication applier.

`ER_GRP_RPL_MISSING_GRP_RPL_APPLIER` was added in 8.0.11.

- **Error number:** `MY-011488`; **Symbol:** `ER_GRP_RPL_CERTIFIER_MSSG_PROCESS_ERROR`; **SQLSTATE:** `HY000`

Message: Error processing message in Certifier.
**ER_GRP_RPL_CERTIFIER_MSSG_PROCESS_ERROR** was added in 8.0.11.

- Error number: MY-011489; Symbol: **ER_GRP_RPL_SRV_NOT_ONLINE**; SQLSTATE: **HY000**
  
  **Message:** This server was not declared online since it is on status %s.

**ER_GRP_RPL_SRV_NOT_ONLINE** was added in 8.0.11.

- Error number: MY-011490; Symbol: **ER_GRP_RPL_SRV_ONLINE**; SQLSTATE: **HY000**
  
  **Message:** This server was declared online within the replication group.

**ER_GRP_RPL_SRV_ONLINE** was added in 8.0.11.

- Error number: MY-011491; Symbol: **ER_GRP_RPL_DISABLE_SRV_READ_MODE_RESTRICTED**; SQLSTATE: **HY000**
  
  **Message:** When declaring the plugin online it was not possible to disable the server read mode settings. Try to disable it manually.

**ER_GRP_RPL_DISABLE_SRV_READ_MODE_RESTRICTED** was added in 8.0.11.

- Error number: MY-011492; Symbol: **ER_GRP_RPL_MEM_ONLINE**; SQLSTATE: **HY000**
  
  **Message:** The member with address %s:%u was declared online within the replication group.

**ER_GRP_RPL_MEM_ONLINE** was added in 8.0.11.

- Error number: MY-011493; Symbol: **ER_GRP_RPL_MEM_UNREACHABLE**; SQLSTATE: **HY000**
  
  **Message:** Member with address %s:%u has become unreachable.

**ER_GRP_RPL_MEM_UNREACHABLE** was added in 8.0.11.

- Error number: MY-011494; Symbol: **ER_GRP_RPL_MEM_REACHABLE**; SQLSTATE: **HY000**
  
  **Message:** Member with address %s:%u is reachable again.

**ER_GRP_RPL_MEM_REACHABLE** was added in 8.0.11.

- Error number: MY-011495; Symbol: **ER_GRP_RPL_SRV_BLOCKED**; SQLSTATE: **HY000**
  
  **Message:** This server is not able to reach a majority of members in the group. This server will now block all updates. The server will remain blocked until contact with the majority is restored. It is possible to use group_replication_force_members to force a new group membership.

**ER_GRP_RPL_SRV_BLOCKED** was added in 8.0.11.

- Error number: MY-011496; Symbol: **ER_GRP_RPL_SRV_BLOCKED_FOR_SECS**; SQLSTATE: **HY000**
  
  **Message:** This server is not able to reach a majority of members in the group. This server will now block all updates. The server will remain blocked for the next %lu seconds. Unless contact with the majority is restored, after this time the member will error out and leave the group. It is possible to use group_replication_force_members to force a new group membership.

**ER_GRP_RPL_SRV_BLOCKED_FOR_SECS** was added in 8.0.11.

- Error number: MY-011497; Symbol: **ER_GRP_RPL_CHANGE_GRP_MEM_NOT_PROCESSED**; SQLSTATE: **HY000**
  
  **Message:** A group membership change was received but the plugin is already leaving due to the configured timeout on group_replication_unreachable_majority_timeout option.
ER_GRP_RPL_CHANGE_GRP_MEM_NOT_PROCESSED was added in 8.0.11.

• Error number: MY-011498; Symbol: ER_GRP_RPL_MEMBER_CONTACT_RESTORED; SQLSTATE: HY000
  Message: The member has resumed contact with a majority of the members in the group. Regular operation is restored and transactions are unblocked.

ER_GRP_RPL_MEMBER_CONTACT_RESTORED was added in 8.0.11.

• Error number: MY-011499; Symbol: ER_GRP_RPL_MEMBER_REMOVED; SQLSTATE: HY000
  Message: Members removed from the group: %s

ER_GRP_RPL_MEMBER_REMOVED was added in 8.0.11.

• Error number: MY-011500; Symbol: ER_GRP_RPL_PRIMARY_MEMBER_LEFT_GRP; SQLSTATE: HY000
  Message: Primary server with address %s left the group. Electing new Primary.

ER_GRP_RPL_PRIMARY_MEMBER_LEFT_GRP was added in 8.0.11.

• Error number: MY-011501; Symbol: ER_GRP_RPL_MEMBER_ADDED; SQLSTATE: HY000
  Message: Members joined the group: %s

ER_GRP_RPL_MEMBER_ADDED was added in 8.0.11.

• Error number: MY-011502; Symbol: ER_GRP_RPL_MEMBER_EXIT_PLUGIN_ERROR; SQLSTATE: HY000
  Message: There was a previous plugin error while the member joined the group. The member will now exit the group.

ER_GRP_RPL_MEMBER_EXIT_PLUGIN_ERROR was added in 8.0.11.

• Error number: MY-011503; Symbol: ER_GRP_RPL_MEMBER_CHANGE; SQLSTATE: HY000
  Message: Group membership changed to %s on view %s.

ER_GRP_RPL_MEMBER_CHANGE was added in 8.0.11.

• Error number: MY-011504; Symbol: ER_GRP_RPL_MEMBER_LEFT_GRP; SQLSTATE: HY000
  Message: Group membership changed: This member has left the group.

ER_GRP_RPL_MEMBER_LEFT_GRP was added in 8.0.11.

• Error number: MY-011505; Symbol: ER_GRP_RPL_MEMBER_EXPELLED; SQLSTATE: HY000
  Message: Member was expelled from the group due to network failures, changing member status to ERROR.

ER_GRP_RPL_MEMBER_EXPELLED was added in 8.0.11.

• Error number: MY-011506; Symbol: ER_GRP_RPL_SESSION_OPEN_FAILED; SQLSTATE: HY000
  Message: Unable to open session to (re)set read only mode. Skipping.

ER_GRP_RPL_SESSION_OPEN_FAILED was added in 8.0.11.

• Error number: MY-011507; Symbol: ER_GRP_RPL_NEW_PRIMARY_ELECTED; SQLSTATE: HY000
Server Error Message Reference

Message: A new primary with address %s:%u was elected. %s

ER_GRP_RPL_NEW_PRIMARY_ELECTED was added in 8.0.11.

- Error number: MY-011508; Symbol: ER_GRP_RPL_DISABLE_READ_ONLY_FAILED; SQLSTATE: HY000
  Message: Unable to disable super read only flag. Try to disable it manually
  ER_GRP_RPL_DISABLE_READ_ONLY_FAILED was added in 8.0.11.

- Error number: MY-011509; Symbol: ER_GRP_RPL_ENABLE_READ_ONLY_FAILED; SQLSTATE: HY000
  Message: Unable to set super read only flag. Try to set it manually.
  ER_GRP_RPL_ENABLE_READ_ONLY_FAILED was added in 8.0.11.

- Error number: MY-011510; Symbol: ER_GRP_RPL_SRV_PRIMARY_MEM; SQLSTATE: HY000
  Message: This server is working as primary member.
  ER_GRP_RPL_SRV_PRIMARY_MEM was added in 8.0.11.

- Error number: MY-011511; Symbol: ER_GRP_RPL_SRV_SECONDARY_MEM; SQLSTATE: HY000
  Message: This server is working as secondary member with primary member address %s:%u.
  ER_GRP_RPL_SRV_SECONDARY_MEM was added in 8.0.11.

- Error number: MY-011512; Symbol: ER_GRP_RPL_NO_SUITABLE_PRIMARY_MEM; SQLSTATE: HY000
  Message: Unable to set any member as primary. No suitable candidate.
  ER_GRP_RPL_NO_SUITABLE_PRIMARY_MEM was added in 8.0.11.

- Error number: MY-011513; Symbol: ER_GRP_RPL_SUPER_READ_ONLY_ACTIVATE_ERROR; SQLSTATE: HY000
  Message: Error when activating super_read_only mode on start. The member will now exit the group.
  ER_GRP_RPL_SUPER_READ_ONLY_ACTIVATE_ERROR was added in 8.0.11.

- Error number: MY-011514; Symbol: ER_GRP_RPL_EXCEEDS_AUTO_INC_VALUE; SQLSTATE: HY000
  Message: Group contains %lu members which is greater than auto_increment_increment value of %lu. This can lead to a higher transactional abort rate.
  ER_GRP_RPL_EXCEEDS_AUTO_INC_VALUE was added in 8.0.11.

- Error number: MY-011515; Symbol: ER_GRP_RPL_DATA_NOT_PROVIDED_BY_MEM; SQLSTATE: HY000
  Message: Member with address '%s:%u' didn't provide any data during the last group change. Group information can be outdated and lead to errors on recovery.
  ER_GRP_RPL_DATA_NOT_PROVIDED_BY_MEM was added in 8.0.11.

- Error number: MY-011516; Symbol: ER_GRP_RPL_MEMBER_ALREADY_EXISTS; SQLSTATE: HY000
Server Error Message Reference

Message: There is already a member with server_uuid %s. The member will now exit the group.

`ER_GRP_RPL_MEMBER_ALREADY_EXISTS` was added in 8.0.11.

- Error number: `MY-011517`; Symbol: `ER_GRP_RPL_GRP_CHANGE_INFO_EXTRACT_ERROR`; SQLSTATE: `HY000`

Message: Error when extracting information for group change. Operations and checks made to group joiners may be incomplete.

`ER_GRP_RPL_GRP_CHANGE_INFO_EXTRACT_ERROR` was added in 8.0.11.

- Error number: `MY-011518`; Symbol: `ER_GRP_RPL_GTID_EXECUTED_EXTRACT_ERROR`; SQLSTATE: `HY000`

Message: Error when extracting this member GTID executed set. Operations and checks made to group joiners may be incomplete.

`ER_GRP_RPL_GTID_EXECUTED_EXTRACT_ERROR` was added in 8.0.11.

- Error number: `MY-011519`; Symbol: `ER_GRP_RPL_GTID_SET_EXTRACT_ERROR`; SQLSTATE: `HY000`

Message: Error when extracting this member retrieved set for its applier. Operations and checks made to group joiners may be incomplete.

`ER_GRP_RPL_GTID_SET_EXTRACT_ERROR` was added in 8.0.11.

- Error number: `MY-011520`; Symbol: `ER_GRP_RPL_START_FAILED`; SQLSTATE: `HY000`

Message: The START GROUP_REPLICATION command failed since the group already has 9 members.

`ER_GRP_RPL_START_FAILED` was added in 8.0.11.

- Error number: `MY-011521`; Symbol: `ER_GRP_RPL_MEMBER_VER_INCOMPATIBLE`; SQLSTATE: `HY000`

Message: Member version is incompatible with the group.

`ER_GRP_RPL_MEMBER_VER_INCOMPATIBLE` was added in 8.0.11.

- Error number: `MY-011522`; Symbol: `ER_GRP_RPL_TRANS_NOT_PRESENT_IN_GRP`; SQLSTATE: `HY000`

Message: The member contains transactions not present in the group. The member will now exit the group.

`ER_GRP_RPL_TRANS_NOT_PRESENT_IN_GRP` was added in 8.0.11.

- Error number: `MY-011523`; Symbol: `ER_GRP_RPL_TRANS_GREATER_THAN_GRP`; SQLSTATE: `HY000`

Message: It was not possible to assess if the member has more transactions than the group. The member will now exit the group.

`ER_GRP_RPL_TRANS_GREATER_THAN_GRP` was added in 8.0.11.
• Error number: MY-011524; Symbol: ER_GRP_RPL_MEMBER_VERSION_LOWER_THAN_GRP; SQLSTATE: HY000
Message: Member version is lower than some group member, but since option 'group_replication_allow_local_lower_version_join is enabled, member will be allowed to join.
ER_GRP_RPL_MEMBER_VERSION_LOWER_THAN_GRP was added in 8.0.11.

• Error number: MY-011525; Symbol: ER_GRP_RPL_LOCAL_GTID_SETS_PROCESS_ERROR; SQLSTATE: HY000
Message: Error processing local GTID sets when comparing this member transactions against the group.
ER_GRP_RPL_LOCAL_GTID_SETS_PROCESS_ERROR was added in 8.0.11.

• Error number: MY-011526; Symbol: ER_GRP_RPL_MEMBER_TRANS_GREATER_THAN_GRP; SQLSTATE: HY000
Message: This member has more executed transactions than those present in the group. Local transactions: %s > Group transactions: %s
ER_GRP_RPL_MEMBER_TRANS_GREATER_THAN_GRP was added in 8.0.11.

• Error number: MY-011527; Symbol: ER_GRP_RPL_BLOCK_SIZE_DIFF_FROM_GRP; SQLSTATE: HY000
Message: The member is configured with a group_replication_gtid_assignment_block_size option value `%llu` different from the group `%llu`. The member will now exit the group.
ER_GRP_RPL_BLOCK_SIZE_DIFF_FROM_GRP was added in 8.0.11.

• Error number: MY-011528; Symbol: ER_GRP_RPL_TRANS_WRITE_SET_EXTRACT_DIFF_FROM_GRP; SQLSTATE: HY000
Message: The member is configured with a transaction-write-set-extraction option value `%s` different from the group `%s`. The member will now exit the group.
ER_GRP_RPL_TRANS_WRITE_SET_EXTRACT_DIFF_FROM_GRP was added in 8.0.11.

• Error number: MY-011529; Symbol: ER_GRP_RPL_MEMBER_CFG_INCOMPATIBLE_WITH_GRP_CFG; SQLSTATE: HY000
Message: The member configuration is not compatible with the group configuration. Variables such as single_primary_mode or enforce_update_everywhere_checks must have the same value on every server in the group. (member configuration option: [%s], group configuration option: [%s]).
ER_GRP_RPL_MEMBER_CFG_INCOMPATIBLE_WITH_GRP_CFG was added in 8.0.11.

• Error number: MY-011530; Symbol: ER_GRP_RPL_MEMBER_STOP_RPL_CHANNELS_ERROR; SQLSTATE: HY000
Message: Error stopping all replication channels while server was leaving the group. %s
ER_GRP_RPL_MEMBER_STOP_RPL_CHANNELS_ERROR was added in 8.0.11.

• Error number: MY-011531; Symbol: ER_GRP_RPL_PURGE_APPLIER_LOGS; SQLSTATE: HY000
Message: Detected previous RESET MASTER invocation or an issue exists in the group replication applier relay log. Purging existing applier logs.
ER_GRP_RPL_PURGE_APPLIER_LOGS was added in 8.0.11.
• Error number: MY-011532; Symbol: ER_GRP_RPL_RESET_APPLIER_MODULE_LOGS_ERROR; SQLSTATE: HY000

Message: Unknown error occurred while resetting applier's module logs.

**ER_GRP_RPL_RESET_APPLIER_MODULE_LOGS_ERROR** was added in 8.0.11.

• Error number: MY-011533; Symbol: ER_GRP_RPL_APPLIER_THD_SETUP_ERROR; SQLSTATE: HY000

Message: Failed to setup the group replication applier thread.

**ER_GRP_RPL_APPLIER_THD_SETUP_ERROR** was added in 8.0.11.

• Error number: MY-011534; Symbol: ER_GRP_RPL_APPLIER_THD_START_ERROR; SQLSTATE: HY000

Message: Error while starting the group replication applier thread.

**ER_GRP_RPL_APPLIER_THD_START_ERROR** was added in 8.0.11.

• Error number: MY-011535; Symbol: ER_GRP_RPL_APPLIER_THD_STOP_ERROR; SQLSTATE: HY000

Message: Failed to stop the group replication applier thread.

**ER_GRP_RPL_APPLIER_THD_STOP_ERROR** was added in 8.0.11.

• Error number: MY-011536; Symbol: ER_GRP_RPL_FETCH_TRANS_DATA_FAILED; SQLSTATE: HY000

Message: Failed to fetch transaction data containing required transaction info for applier

**ER_GRP_RPL_FETCH_TRANS_DATA_FAILED** was added in 8.0.11.

• Error number: MY-011537; Symbol: ER_GRP_RPL_SLAVE_IO_THD_PRIMARY_UNKNOWN; SQLSTATE: HY000

Message: Can't start slave IO THREAD of channel '%s' when group replication is running with single-primary mode and the primary member is not known.

**ER_GRP_RPL_SLAVE_IO_THD_PRIMARY_UNKNOWN** was added in 8.0.11.

• Error number: MY-011538; Symbol: ER_GRP_RPL_SLAVE_IO_THD_ON_SECONDARY_MEMBER; SQLSTATE: HY000

Message: Can't start slave IO THREAD of channel '%s' when group replication is running with single-primary mode on a secondary member.

**ER_GRP_RPL_SLAVE_IO_THD_ON_SECONDARY_MEMBER** was added in 8.0.11.

• Error number: MY-011539; Symbol: ER_GRP_RPL_SLAVE_SQL_THD_PRIMARY_UNKNOWN; SQLSTATE: HY000

Message: Can't start slave SQL THREAD of channel '%s' when group replication is running with single-primary mode and the primary member is not known.

**ER_GRP_RPL_SLAVE_SQL_THD_PRIMARY_UNKNOWN** was added in 8.0.11.
• Error number: MY-011540; Symbol: ER_GRP_RPL_SLAVE_SQL_THD_ON_SECONDARY_MEMBER; SQLSTATE: HY000
Message: Can't start slave SQL THREAD of channel '%s' when group replication is running with single-primary mode on a secondary member.

ER_GRP_RPL_SLAVE_SQL_THD_ON_SECONDARY_MEMBER was added in 8.0.11.

• Error number: MY-011541; Symbol: ER_GRP_RPL_NEEDS_INNODB_TABLE; SQLSTATE: HY000
Message: Table %s does not use the InnoDB storage engine. This is not compatible with Group Replication.

ER_GRP_RPL_NEEDS_INNODB_TABLE was added in 8.0.11.

• Error number: MY-011542; Symbol: ER_GRP_RPL_PRIMARY_KEY_NOT_DEFINED; SQLSTATE: HY000
Message: Table %s does not have any PRIMARY KEY. This is not compatible with Group Replication.

ER_GRP_RPL_PRIMARY_KEY_NOT_DEFINED was added in 8.0.11.

• Error number: MY-011543; Symbol: ER_GRP_RPL_FK_WITH_CASCADE_UNSUPPORTED; SQLSTATE: HY000
Message: Table %s has a foreign key with 'CASCADE', 'SET NULL' or 'SET DEFAULT' clause. This is not compatible with Group Replication.

ER_GRP_RPL_FK_WITH_CASCADE_UNSUPPORTED was added in 8.0.11.

• Error number: MY-011544; Symbol: ER_GRP_RPL_AUTO_INC_RESET; SQLSTATE: HY000
Message: auto_increment_increment is reset to %lu

ER_GRP_RPL_AUTO_INC_RESET was added in 8.0.11.

• Error number: MY-011545; Symbol: ER_GRP_RPL_AUTO_INC_OFFSET_RESET; SQLSTATE: HY000
Message: auto_increment_offset is reset to %lu

ER_GRP_RPL_AUTO_INC_OFFSET_RESET was added in 8.0.11.

• Error number: MY-011546; Symbol: ER_GRP_RPL_AUTO_INC_SET; SQLSTATE: HY000
Message: auto_increment_increment is set to %lu

ER_GRP_RPL_AUTO_INC_SET was added in 8.0.11.

• Error number: MY-011547; Symbol: ER_GRP_RPL_AUTO_INC_OFFSET_SET; SQLSTATE: HY000
Message: auto_increment_offset is set to %lu

ER_GRP_RPL_AUTO_INC_OFFSET_SET was added in 8.0.11.

• Error number: MY-011548; Symbol: ER_GRP_RPL_FETCH_TRANS_CONTEXT_FAILED; SQLSTATE: HY000
Message: Failed to fetch transaction context containing required transaction info for certification

ER_GRP_RPL_FETCH_TRANS_CONTEXT_FAILED was added in 8.0.11.
• Error number: MY-011549; Symbol: ER_GRP_RPL_FETCH_FORMAT_DESC_LOG_EVENT_FAILED; SQLSTATE: HY000
Message: Failed to fetch Format_description_log_event containing required server info for applier
ER_GRP_RPL_FETCH_FORMAT_DESC_LOG_EVENT_FAILED was added in 8.0.11.

• Error number: MY-011550; Symbol: ER_GRP_RPL_FETCH_TRANS_CONTEXT_LOG_EVENT_FAILED; SQLSTATE: HY000
Message: Failed to fetch Transaction_context_log_event containing required transaction info for certification
ER_GRP_RPL_FETCH_TRANS_CONTEXT_LOG_EVENT_FAILED was added in 8.0.11.

• Error number: MY-011551; Symbol: ER_GRP_RPL_FETCH_SNAPSHOT_VERSION_FAILED; SQLSTATE: HY000
Message: Failed to read snapshot version from transaction context event required for certification
ER_GRP_RPL_FETCH_SNAPSHOT_VERSION_FAILED was added in 8.0.11.

• Error number: MY-011552; Symbol: ER_GRP_RPL_FETCH_GTID_LOG_EVENT_FAILED; SQLSTATE: HY000
Message: Failed to fetch Gtid_log_event containing required transaction info for certification
ER_GRP_RPL_FETCH_GTID_LOG_EVENT_FAILED was added in 8.0.11.

• Error number: MY-011553; Symbol: ER_GRP_RPL_UPDATE_SERV_CERTIFICATE_FAILED; SQLSTATE: HY000
Message: Unable to update certification result on server side, thread_id: %lu
ER_GRP_RPL_UPDATE_SERV_CERTIFICATE_FAILED was added in 8.0.11.

• Error number: MY-011554; Symbol: ER_GRP_RPL_ADD_GTID_INFO_WITH_LOCAL_GTID_FAILED; SQLSTATE: HY000
Message: Unable to add gtid information to the group_gtid_executed set when gtid was provided for local transactions
ER_GRP_RPL_ADD_GTID_INFO_WITH_LOCAL_GTID_FAILED was added in 8.0.11.

• Error number: MY-011555; Symbol: ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_LOCAL_GTID_FAILED; SQLSTATE: HY000
Message: Unable to add gtid information to the group_gtid_executed set when no gtid was provided for local transactions
ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_LOCAL_GTID_FAILED was added in 8.0.11.

• Error number: MY-011556; Symbol: ER_GRP_RPL_NOTIFY_CERTIFICATION_OUTCOME_FAILED; SQLSTATE: HY000
Message: Failed to notify certification outcome
ER_GRP_RPL_NOTIFY_CERTIFICATION_OUTCOME_FAILED was added in 8.0.11.
• Error number: MY-011557; Symbol: ER_GRP_RPL_ADD_GTID_INFO_WITH_REMOTE_GTID_FAILED; SQLSTATE: HY000
Message: Unable to add gtid information to the group_gtid_executed set when gtid was provided for remote transactions
ER_GRP_RPL_ADD_GTID_INFO_WITH_REMOTE_GTID_FAILED was added in 8.0.11.

• Error number: MY-011558; Symbol: ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_REMOTE_GTID_FAILED; SQLSTATE: HY000
Message: Unable to add gtid information to the group_gtid_executed set when gtid was not provided for remote transactions
ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_REMOTE_GTID_FAILED was added in 8.0.11.

• Error number: MY-011559; Symbol: ER_GRP_RPL_FETCH_VIEW_CHANGE_LOG_EVENT_FAILED; SQLSTATE: HY000
Message: Failed to fetch View_change_log_event containing required info for certification
ER_GRP_RPL_FETCH_VIEW_CHANGE_LOG_EVENT_FAILED was added in 8.0.11.

• Error number: MY-011560; Symbol: ER_GRP_RPL_CONTACT_WITH_SRV_FAILED; SQLSTATE: HY000
Message: Error when contacting the server to ensure the proper logging of a group change in the binlog
ER_GRP_RPL_CONTACT_WITH_SRV_FAILED was added in 8.0.11.

• Error number: MY-011561; Symbol: ER_GRP_RPL_SRV_WAIT_TIME_OUT; SQLSTATE: HY000
Message: Timeout when waiting for the server to execute local transactions in order assure the group change proper logging
ER_GRP_RPL_SRV_WAIT_TIME_OUT was added in 8.0.11.

• Error number: MY-011562; Symbol: ER_GRP_RPL_FETCH_LOG_EVENT_FAILED; SQLSTATE: HY000
Message: Failed to fetch Log_event containing required server info for applier
ER_GRP_RPL_FETCH_LOG_EVENT_FAILED was added in 8.0.11.

• Error number: MY-011563; Symbol: ER_GRP_RPL_START_GRP_RPL_FAILED; SQLSTATE: HY000
Message: Unable to start Group Replication. Replication applier infrastructure is not initialized since the server was started with --initialize, --initialize-insecure or --upgrade=MINIMAL on a server upgrade.
ER_GRP_RPL_START_GRP_RPL_FAILED was added in 8.0.11.

• Error number: MY-011564; Symbol: ER_GRP_RPL_CONN_INTERNAL_PLUGIN_FAIL; SQLSTATE: HY000
Message: Failed to establish an internal server connection to execute plugin operations
ER_GRP_RPL_CONN_INTERNAL_PLUGIN_FAIL was added in 8.0.11.
Server Error Message Reference

- Error number: MY-011565; Symbol: ER_GRP_RPL_SUPER_READ_ON; SQLSTATE: HY000
  Message: Setting super_read_only=ON.
  ER_GRP_RPL_SUPER_READ_ON was added in 8.0.11.

- Error number: MY-011566; Symbol: ER_GRP_RPL_SUPER_READ_OFF; SQLSTATE: HY000
  Message: Setting super_read_only=OFF.
  ER_GRP_RPL_SUPER_READ_OFF was added in 8.0.11.

- Error number: MY-011567; Symbol: ER_GRP_RPL_KILLED_SESSION_ID; SQLSTATE: HY000
  Message: killed session id: %d status: %d
  ER_GRP_RPL_KILLED_SESSION_ID was added in 8.0.11.

- Error number: MY-011568; Symbol: ER_GRP_RPL_KILLED_FAILED_ID; SQLSTATE: HY000
  Message: killed failed id: %d failed: %d
  ER_GRP_RPL_KILLED_FAILED_ID was added in 8.0.11.

- Error number: MY-011569; Symbol: ER_GRP_RPL_INTERNAL_QUERY; SQLSTATE: HY000
  Message: Internal query: %s result in error. Error number: %ld
  ER_GRP_RPL_INTERNAL_QUERY was added in 8.0.11.

- Error number: MY-011570; Symbol: ER_GRP_RPL_COPY_FROM_EMPTY_STRING; SQLSTATE: HY000
  Message: Error copying from empty string
  ER_GRP_RPL_COPY_FROM_EMPTY_STRING was added in 8.0.11.

- Error number: MY-011571; Symbol: ER_GRP_RPL_QUERY_FAIL; SQLSTATE: HY000
  Message: Query execution resulted in failure. errno: %d
  ER_GRP_RPL_QUERY_FAIL was added in 8.0.11.

- Error number: MY-011572; Symbol: ER_GRP_RPL_CREATE_SESSION_UNABLE; SQLSTATE: HY000
  Message: Unable to create a session for executing the queries on the server
  ER_GRP_RPL_CREATE_SESSION_UNABLE was added in 8.0.11.

- Error number: MY-011573; Symbol: ER_GRP_RPL_MEMBER_NOT_FOUND; SQLSTATE: HY000
  Message: The member with address %s:%u has unexpectedly disappeared, killing the current group replication recovery connection
  ER_GRP_RPL_MEMBER_NOT_FOUND was added in 8.0.11.

- Error number: MY-011574; Symbol: ER_GRP_RPL_MAXIMUM_CONNECTION_RETRIES_REACHED; SQLSTATE: HY000
  Message: Maximum number of retries when trying to connect to a donor reached. Aborting group replication incremental recovery.
  ER_GRP_RPL_MAXIMUM_CONNECTION_RETRIES_REACHED was added in 8.0.11.
Server Error Message Reference

- **Error number:** MY-011575; **Symbol:** ER_GRP_RPL_ALL_DONORS_LEFT_ABORT_RECOVERY; **SQLSTATE:** HY000
  
  Message: All donors left. Aborting group replication incremental recovery.
  
  ER_GRP_RPL_ALL_DONORS_LEFT_ABORT_RECOVERY was added in 8.0.11.

- **Error number:** MY-011576; **Symbol:** ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_DONOR; **SQLSTATE:** HY000
  
  Message: Establishing group recovery connection with a possible donor. Attempt %d/%d
  
  ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_DONOR was added in 8.0.11.

- **Error number:** MY-011577; **Symbol:** ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_ANOTHER_DONOR; **SQLSTATE:** HY000
  
  Message: Retrying group recovery connection with another donor. Attempt %d/%d
  
  ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_ANOTHER_DONOR was added in 8.0.11.

- **Error number:** MY-011578; **Symbol:** ER_GRP_RPL_NO_VALID_DONOR; **SQLSTATE:** HY000
  
  Message: No valid donors exist in the group, retrying
  
  ER_GRP_RPL_NO_VALID_DONOR was added in 8.0.11.

- **Error number:** MY-011579; **Symbol:** ER_GRP_RPL_CONFIG_RECOVERY; **SQLSTATE:** HY000
  
  Message: Error when configuring the asynchronous recovery channel connection to the donor.
  
  ER_GRP_RPL_CONFIG_RECOVERY was added in 8.0.11.

- **Error number:** MY-011580; **Symbol:** ER_GRP_RPL_ESTABLISHING_CONN_GRP_REC_DONOR; **SQLSTATE:** HY000
  
  Message: Establishing connection to a group replication recovery donor %s at %s port: %d.
  
  ER_GRP_RPL_ESTABLISHING_CONN_GRP_REC_DONOR was added in 8.0.11.

- **Error number:** MY-011581; **Symbol:** ER_GRP_RPL_CREATE_GRP_RPL_REC_CHANNEL; **SQLSTATE:** HY000
  
  Message: Error while creating the group replication recovery channel with donor %s at %s port: %d.
  
  ER_GRP_RPL_CREATE_GRP_RPL_REC_CHANNEL was added in 8.0.11.

- **Error number:** MY-011582; **Symbol:** ER_GRP_RPL_DONOR_SERVER_CONN; **SQLSTATE:** HY000
  
  Message: There was an error when connecting to the donor server. Please check that group_replication_recovery channel credentials and all MEMBER_HOST column values of performance_schema.replication_group_members table are correct and DNS resolvable.
  
  ER_GRP_RPL_DONOR_SERVER_CONN was added in 8.0.11.

- **Error number:** MY-011583; **Symbol:** ER_GRP_RPL_CHECK_STATUS_TABLE; **SQLSTATE:** HY000
  
  Message: For details please check performance_schema.replication_connection_status table and error log messages of Slave I/O for channel group_replication_recovery.
  
  ER_GRP_RPL_CHECK_STATUS_TABLE was added in 8.0.11.

- **Error number:** MY-011584; **Symbol:** ER_GRP_RPL_STARTING_GRP_REC; **SQLSTATE:** HY000
Server Error Message Reference

Message: Error while starting the group replication incremental recovery receiver/applier threads

`ER_GRP_RPL_STARTING_GRP_REC` was added in 8.0.11.

- Error number: MY-011585; Symbol: `ER_GRP_RPL_DONOR_CONN_TERMINATION`; SQLSTATE: HY000

Message: Terminating existing group replication donor connection and purging the corresponding logs.

`ER_GRP_RPL_DONOR_CONN_TERMINATION` was added in 8.0.11.

- Error number: MY-011586; Symbol: `ER_GRP_RPL_STOPPING_GRP_REC`; SQLSTATE: HY000

Message: Error when stopping the group replication incremental recovery's donor connection

`ER_GRP_RPL_STOPPING_GRP_REC` was added in 8.0.11.

- Error number: MY-011587; Symbol: `ER_GRP_RPL_PURGE_REC`; SQLSTATE: HY000

Message: Error when purging the group replication recovery's relay logs

`ER_GRP_RPL_PURGE_REC` was added in 8.0.11.

- Error number: MY-011588; Symbol:
  `ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_APPLIER`; SQLSTATE: HY000

Message: Unable to kill the current group replication recovery donor connection after an applier error. Incremental recovery will shutdown.

`ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_APPLIER` was added in 8.0.11.

- Error number: MY-011589; Symbol:
  `ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_FAILOVER`; SQLSTATE: HY000

Message: Unable to kill the current group replication recovery donor connection during failover. Incremental recovery will shutdown.

`ER_GRP_RPL_UNABLE_TO_KILL_CONN REC DONOR_FAILOVER` was added in 8.0.11.

- Error number: MY-011590; Symbol:
  `ER_GRP_RPL_FAILED_TO_NOTIFY_GRP_MEMBERSHIP_EVENT`; SQLSTATE: HY000

Message: Unexpected error when notifying an internal component named %s regarding a group membership event.

`ER_GRP_RPL_FAILED_TO_NOTIFY_GRP_MEMBERSHIP_EVENT` was added in 8.0.11.

- Error number: MY-011591; Symbol:
  `ER_GRP_RPL_FAILED_TO_BROADCAST_GRP_MEMBERSHIP_NOTIFICATION`; SQLSTATE: HY000

Message: An undefined error was found while broadcasting an internal group membership notification! This is likely to happen if your components or plugins are not properly loaded or are malfunctioning!

`ER_GRP_RPL_FAILED_TO_BROADCAST_GRP_MEMBERSHIP_NOTIFICATION` was added in 8.0.11.
Server Error Message Reference

- **Error number:** MY-011592; **Symbol:** ER_GRP_RPL_FAILED_TO_BROADCAST_MEMBER_STATUS_NOTIFICATION; **SQLSTATE:** HY000
  
  **Message:** An undefined error was found while broadcasting an internal group member status notification! This is likely to happen if your components or plugins are not properly loaded or are malfunctioning!

  *ER_GRP_RPL_FAILED_TO_BROADCAST_MEMBER_STATUS_NOTIFICATION* was added in 8.0.11.

- **Error number:** MY-011593; **Symbol:** ER_GRP_RPL_OOM_FAILED_TO_GENERATE_IDENTIFICATION_HASH; **SQLSTATE:** HY000
  
  **Message:** No memory to generate write identification hash

  *ER_GRP_RPL_OOM_FAILED_TO_GENERATE_IDENTIFICATION_HASH* was added in 8.0.11.

- **Error number:** MY-011594; **Symbol:** ER_GRP_RPL_WRITE_IDENT_HASH_BASE64_ENCODING_FAILED; **SQLSTATE:** HY000
  
  **Message:** Base 64 encoding of the write identification hash failed

  *ER_GRP_RPL_WRITE_IDENT_HASH_BASE64_ENCODING_FAILED* was added in 8.0.11.

- **Error number:** MY-011595; **Symbol:** ER_GRP_RPL_INVALID_BINLOG_FORMAT; **SQLSTATE:** HY000
  
  **Message:** Binlog format should be ROW for Group Replication

  *ER_GRP_RPL_INVALID_BINLOG_FORMAT* was added in 8.0.11.

- **Error number:** MY-011596; **Symbol:** ER_GRP_RPL_BINLOG_CHECKSUM_SET; **SQLSTATE:** HY000
  
  **Message:** binlog_checksum should be NONE for Group Replication

  *ER_GRP_RPL_BINLOG_CHECKSUM_SET* was added in 8.0.11, removed after 8.0.20.

- **Error number:** MY-011597; **Symbol:** ER_GRP_RPL_TRANS_WRITE_SET_EXTRACTION_NOT_SET; **SQLSTATE:** HY000
  
  **Message:** A transaction_write_set_extraction algorithm should be selected when running Group Replication

  *ER_GRP_RPL_TRANS_WRITE_SET_EXTRACTION_NOT_SET* was added in 8.0.11.

- **Error number:** MY-011598; **Symbol:** ER_GRP_RPL_UNSUPPORTED_TRANS_ISOLATION; **SQLSTATE:** HY000
  
  **Message:** Transaction isolation level (tx_isolation) is set to SERIALIZABLE, which is not compatible with Group Replication

  *ER_GRP_RPL_UNSUPPORTED_TRANS_ISOLATION* was added in 8.0.11.

- **Error number:** MY-011599; **Symbol:** ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_STOPPING; **SQLSTATE:** HY000
  
  **Message:** Transaction cannot be executed while Group Replication is stopping.

  *ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_STOPPING* was added in 8.0.11.
• Error number: MY-011600; Symbol: `ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_RECOVERING`; SQLSTATE: HY000
   
   Message: Transaction cannot be executed while Group Replication is recovering. Try again when the server is ONLINE.
   
   `ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_RECOVERING` was added in 8.0.11.

• Error number: MY-011601; Symbol: `ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_ERROR_STATE`; SQLSTATE: HY000
   
   Message: Transaction cannot be executed while Group Replication is on ERROR state. Check for errors and restart the plugin.
   
   `ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_ERROR_STATE` was added in 8.0.11.

• Error number: MY-011602; Symbol: `ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_OFFLINE_MODE`; SQLSTATE: HY000
   
   Message: Transaction cannot be executed while Group Replication is OFFLINE. Check for errors and restart the plugin.
   
   `ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_OFFLINE_MODE` was added in 8.0.11.

• Error number: MY-011603; Symbol: `ER_GRP_RPL_MULTIPLE_CACHE_TYPE_NOT_SUPPORTED_FOR_SESSION`; SQLSTATE: HY000
   
   Message: We can only use one cache type at a time on session %u.
   
   `ER_GRP_RPL_MULTIPLE_CACHE_TYPE_NOT_SUPPORTED_FOR_SESSION` was added in 8.0.11.

• Error number: MY-011604; Symbol: `ER_GRP_RPL_FAILED_TO_REINIT_BINLOG_CACHE_FOR_READ`; SQLSTATE: HY000
   
   Message: Failed to reinit binlog cache log for read on session %u.
   
   `ER_GRP_RPL_FAILED_TO_REINIT_BINLOG_CACHE_FOR_READ` was added in 8.0.11.

• Error number: MY-011605; Symbol: `ER_GRP_RPL_FAILED_TO_CREATE_TRANS_CONTEXT`; SQLSTATE: HY000
   
   Message: Failed to create the context of the current transaction on session %u.
   
   `ER_GRP_RPL_FAILED_TO_CREATE_TRANS_CONTEXT` was added in 8.0.11.

• Error number: MY-011606; Symbol: `ER_GRP_RPL_FAILED_TO_EXTRACT_TRANS_WRITE_SET`; SQLSTATE: HY000
   
   Message: Failed to extract the set of items written during the execution of the current transaction on session %u.
   
   `ER_GRP_RPL_FAILED_TO_EXTRACT_TRANS_WRITE_SET` was added in 8.0.11.

• Error number: MY-011607; Symbol: `ER_GRP_RPL_FAILED_TO_GATHER_TRANS_WRITE_SET`; SQLSTATE: HY000
   
   Message: Failed to gather the set of items written during the execution of the current transaction on session %u.
   
   `ER_GRP_RPL_FAILED_TO_GATHER_TRANS_WRITE_SET` was added in 8.0.11.

• Error number: MY-011608; Symbol: `ER_GRP_RPL_TRANS_SIZE_EXCEEDS_LIMIT`; SQLSTATE: HY000
Message: Error on session %u. Transaction of size %llu exceeds specified limit %lu. To increase the limit please adjust `group_replication_transaction_size_limit` option.

`ER_GRP_RPL_TRANS_SIZE_EXCEEDS_LIMIT` was added in 8.0.11.

- Error number: MY-011609; Symbol: `ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_READ_FAILED`; SQLSTATE: HY000
  Message: Error while re-initializing an internal cache, for read operations, on session %u

`ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_READ_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011610; Symbol: `ER_GRP_RPL_APPENDING_DATA_TO_INTERNAL_CACHE_FAILED`; SQLSTATE: HY000
  Message: Error while appending data to an internal cache on session %u

`ER_GRP_RPL_APPENDING_DATA_TO_INTERNAL_CACHE_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011611; Symbol: `ER_GRP_RPL_WRITE_TO_BINLOG_CACHE_FAILED`; SQLSTATE: HY000
  Message: Error while writing binary log cache on session %u

`ER_GRP_RPL_WRITE_TO_BINLOG_CACHE_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error number: MY-011611; Symbol: `ER_GRP_RPL_WRITE_TO_TRANSACTION_MESSAGE_FAILED`; SQLSTATE: HY000
  Message: Error while writing to transaction message on session %u

`ER_GRP_RPL_WRITE_TO_TRANSACTION_MESSAGE_FAILED` was added in 8.0.13.

- Error number: MY-011612; Symbol: `ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_OUTCOME_NOTIFICTION`; SQLSTATE: HY000
  Message: Unable to register for getting notifications regarding the outcome of the transaction on session %u

`ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_OUTCOME_NOTIFICTION` was added in 8.0.11.

- Error number: MY-011613; Symbol: `ER_GRP_RPL_MSG_TOO_LONG_BROADCASTING_TRANS_FAILED`; SQLSTATE: HY000
  Message: Error broadcasting transaction to the group on session %u. Message is too big.

`ER_GRP_RPL_MSG_TOO_LONG_BROADCASTING_TRANS_FAILED` was added in 8.0.11.

- Error number: MY-011614; Symbol: `ER_GRP_RPL_BROADCASTING_TRANS_TO_GRP_FAILED`; SQLSTATE: HY000
  Message: Error while broadcasting the transaction to the group on session %u

`ER_GRP_RPL_BROADCASTING_TRANS_TO_GRP_FAILED` was added in 8.0.11.
Server Error Message Reference

- **Error number: MY-011615; Symbol:**
  
  ER_GRP_RPL_ERROR WHILE WAITING FOR CONFLICT DETECTION

  SQLSTATE: HY000

  Message: Error while waiting for conflict detection procedure to finish on session %u

  ER_GRP_RPL_ERROR WHILE WAITING FOR CONFLICT DETECTION was added in 8.0.11.

- **Error number: MY-011616; Symbol:**
  
  ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE FOR WRITE FAILED

  SQLSTATE: HY000

  Message: Error while re-initializing an internal cache, for write operations, on session %u

  ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE FOR WRITE FAILED was added in 8.0.11, removed after 8.0.12.

- **Error number: MY-011617; Symbol:**
  
  ER_GRP_RPL_FAILED TO CREATE COMMIT CACHE

  SQLSTATE: HY000

  Message: Failed to create group replication commit cache on session %u

  ER_GRP_RPL_FAILED TO CREATE COMMIT CACHE was added in 8.0.11, removed after 8.0.12.

- **Error number: MY-011618; Symbol:**
  
  ER_GRP_RPL_REINIT OF COMMIT CACHE FOR WRITE FAILED

  SQLSTATE: HY000

  Message: Failed to reinit group replication commit cache for write on session %u

  ER_GRP_RPL_REINIT OF COMMIT CACHE FOR WRITE FAILED was added in 8.0.11, removed after 8.0.12.

- **Error number: MY-011619; Symbol:**
  
  ER_GRP_RPL_PREV REC SESSION RUNNING

  SQLSTATE: HY000

  Message: A previous recovery session is still running. Please stop the group replication plugin and wait for it to stop

  ER_GRP_RPL_PREV REC SESSION RUNNING was added in 8.0.11.

- **Error number: MY-011620; Symbol:**
  
  ER_GRP_RPL_FATAL REC PROCESS

  SQLSTATE: HY000

  Message: Fatal error during the incremental recovery process of Group Replication. The server will leave the group.

  ER_GRP_RPL_FATAL REC PROCESS was added in 8.0.11.

- **Error number: MY-011621; Symbol:**
  
  ER_GRP_RPL WHILE STOPPING REP CHANNEL

  SQLSTATE: HY000

  Message: Error stopping all replication channels while server was leaving the group. %s

  ER_GRP_RPL WHILE STOPPING REP CHANNEL was added in 8.0.11, removed after 8.0.17.

- **Error number: MY-011622; Symbol:**
  
  ER_GRP_RPL UNABLE TO EVALUATE APPLIER STATUS

  SQLSTATE: HY000

  Message: Unable to evaluate the group replication applier execution status. Group replication recovery will shutdown to avoid data corruption.

  ER_GRP_RPL UNABLE TO EVALUATE APPLIER STATUS was added in 8.0.11.
• Error number: MY-011623; Symbol: ER_GRP_RPL ONLY_ONE_SERVER_ALIVE; SQLSTATE: HY000
Message: Only one server alive. Declaring this server as online within the replication group ER_GRP_RPL ONLY_ONE_SERVER_ALIVE was added in 8.0.11.

• Error number: MY-011624; Symbol: ER_GRP_RPL CERTIFICATION_REC_PROCESS; SQLSTATE: HY000
Message: Error when processing certification information in the incremental recovery process ER_GRP_RPL CERTIFICATION_REC_PROCESS was added in 8.0.11.

• Error number: MY-011625; Symbol: ER_GRP_RPL UNABLE_TO_ENSURE_EXECUTION_REC; SQLSTATE: HY000
Message: Unable to ensure the execution of group transactions received during recovery. ER_GRP_RPL UNABLE_TO_ENSURE_EXECUTION_REC was added in 8.0.11.

• Error number: MY-011626; Symbol: ER_GRP_RPL WHILE_SENDING_MSG_REC; SQLSTATE: HY000
Message: Error while sending message in the group replication incremental recovery process. ER_GRP_RPL WHILE_SENDING_MSG_REC was added in 8.0.11.

• Error number: MY-011627; Symbol: ER_GRP_RPL READ_UNABLE_FOR_SUPER_READ_ONLY; SQLSTATE: HY000
Message: Unable to read the server value for the super_read_only variable. ER_GRP_RPL READ_UNABLE_FOR_SUPER_READ_ONLY was added in 8.0.11.

• Error number: MY-011628; Symbol:
ER_GRP_RPL READ_UNABLE_FOR_READ_ONLY_SUPER_READ_ONLY; SQLSTATE: HY000
Message: Unable to read the server values for the read_only and super_read_only variables. ER_GRP_RPL READ_UNABLE_FOR_READ_ONLY_SUPER_READ_ONLY was added in 8.0.11.

• Error number: MY-011629; Symbol: ER_GRP_RPL UNABLE_TO_RESET_SERVER_READ_MODE; SQLSTATE: HY000
Message: Unable to reset the server read mode settings. Try to reset them manually. ER_GRP_RPL UNABLE_TO_RESET_SERVER_READ_MODE was added in 8.0.11.

• Error number: MY-011630; Symbol: ER_GRP_RPL UNABLE_TO_CERTIFY_PLUGIN_TRANS; SQLSTATE: HY000
Message: Due to a plugin error, some transactions were unable to be certified and will now rollback. ER_GRP_RPL UNABLE_TO_CERTIFY_PLUGIN_TRANS was added in 8.0.11.

• Error number: MY-011631; Symbol: ER_GRP_RPL UNBLOCK_CERTIFIED_TRANS; SQLSTATE: HY000
Message: Error when trying to unblock non certified or consistent transactions. Check for consistency errors when restarting the service ER_GRP_RPL UNBLOCK_CERTIFIED_TRANS was added in 8.0.11.
• Error number: MY-011632; Symbol: ER_GRP_RPL_SERVER_WORKING_ASSECONDARY; SQLSTATE: HY000

Message: This server is working as secondary member with primary member address %s:%u.

ER_GRP_RPL_SERVER_WORKING_ASSECONDARY was added in 8.0.11.

• Error number: MY-011633; Symbol: ER_GRP_RPL_FAILED_TO_START_WITHINVALID_SERVER_ID; SQLSTATE: HY000

Message: Unable to start Group Replication. Replication applier infrastructure is not initialized since the server was started with server_id=0. Please, restart the server with server_id larger than 0.

ER_GRP_RPL_FAILED_TO_START_WITHINVALID_SERVER_ID was added in 8.0.11.

• Error number: MY-011634; Symbol: ER_GRP_RPL_FORCE_MEMBERS_MUST_BE_EMPTY; SQLSTATE: HY000

Message: group_replication_force_members must be empty on group start. Current value: "%s"

ER_GRP_RPL_FORCE_MEMBERS_MUST_BE_EMPTY was added in 8.0.11.

• Error number: MY-011635; Symbol: ER_GRP_RPL_PLUGIN_STRUCT_INITNOT_POSSIBLE_ON_SERVER_START; SQLSTATE: HY000

Message: It was not possible to guarantee the initialization of plugin structures on server start

ER_GRP_RPL_PLUGIN_STRUCT_INITNOT_POSSIBLE_ON_SERVER_START was added in 8.0.11.

• Error number: MY-011636; Symbol: ER_GRP_RPL_FAILED_TO_ENABLESUPER_READONLY_MODE; SQLSTATE: HY000

Message: Could not enable the server read only mode and guarantee a safe recovery execution

ER_GRP_RPL_FAILED_TO_ENABLESUPER_READONLY_MODE was added in 8.0.11.

• Error number: MY-011637; Symbol: ER_GRP_RPL_FAILED_TO_INITCOMMUNICATION_ENGINE; SQLSTATE: HY000

Message: Error on group communication engine initialization

ER_GRP_RPL_FAILED_TO_INITCOMMUNICATION_ENGINE was added in 8.0.11.

• Error number: MY-011638; Symbol: ER_GRP_RPL_FAILED_TO_STARTONSECONDARY_WITHASYNC_CHANNELS; SQLSTATE: HY000

Message: Can't start group replication on secondary member with single-primary mode while asynchronous replication channels are running.

ER_GRP_RPL_FAILED_TO_STARTONSECONDARY_WITHASYNC_CHANNELS was added in 8.0.11.

• Error number: MY-011639; Symbol: ER_GRP_RPL_FAILED_TO_STARTCOMMUNICATION_ENGINE; SQLSTATE: HY000

Message: Error on group communication engine start

ER_GRP_RPL_FAILED_TO_STARTCOMMUNICATION_ENGINE was added in 8.0.11.
• Error number: MY-011640; Symbol: ER_GRP_RPL_TIMEOUT_ON_VIEW_AFTER_JOINING_GRP; SQLSTATE: HY000
  Message: Timeout on wait for view after joining group
  ER_GRP_RPL_TIMEOUT_ON_VIEW_AFTER_JOINING_GRP was added in 8.0.11.

• Error number: MY-011641; Symbol: ER_GRP_RPL_FAILED_TO_CALL_GRP_COMMUNICATION_INTERFACE; SQLSTATE: HY000
  Message: Error calling group communication interfaces
  ER_GRP_RPL_FAILED_TO_CALL_GRP_COMMUNICATION_INTERFACE was added in 8.0.11.

• Error number: MY-011642; Symbol: ER_GRP_RPL_MEMBER_SERVER_UUID_IS_INCOMPATIBLE_WITH_GRP; SQLSTATE: HY000
  Message: Member serverUuid is incompatible with the group. ServerUuid %s matches groupName %s.
  ER_GRP_RPL_MEMBER_SERVER_UUID_IS_INCOMPATIBLE_WITH_GRP was added in 8.0.11.

• Error number: MY-011643; Symbol: ER_GRP_RPL_MEMBER_CONF_INFO; SQLSTATE: HY000
  Message: Member configuration: memberId: %lu; memberUuid: "%s"; singlePrimaryMode: "%s"; groupReplicationAutoIncrementIncrement: %lu;
  ER_GRP_RPL_MEMBER_CONF_INFO was added in 8.0.11.

• Error number: MY-011644; Symbol: ER_GRP_RPL_FAILED_TOCONFIRM_IF_SERVER_LEFT_GRP; SQLSTATE: HY000
  Message: Unable to confirm whether the server has left the group or not. Check performance_schema.replication_group_members to check group membership information.
  ER_GRP_RPL_FAILED_TOCONFIRM_IF_SERVER_LEFT_GRP was added in 8.0.11.

• Error number: MY-011645; Symbol: ER_GRP_RPL_SERVER_IS_ALREADY_LEAVING; SQLSTATE: HY000
  Message: Skipping leave operation: concurrent attempt to leave the group is on-going.
  ER_GRP_RPL_SERVER_IS_ALREADY_LEAVING was added in 8.0.11.

• Error number: MY-011646; Symbol: ER_GRP_RPL_SERVER_ALREADY_LEFT; SQLSTATE: HY000
  Message: Skipping leave operation: member already left the group.
  ER_GRP_RPL_SERVER_ALREADY_LEFT was added in 8.0.11.

• Error number: MY-011647; Symbol: ER_GRP_RPL_WAITING_FOR_VIEW_UPDATE; SQLSTATE: HY000
  Message: Going to wait for view modification
  ER_GRP_RPL_WAITING_FOR_VIEW_UPDATE was added in 8.0.11.
Server Error Message Reference

- **Error number:** MY-011648; Symbol:
  ER_GRP_RPL_TIMEOUT_RECEIVING_VIEW_CHANGE_ON_SHUTDOWN; SQLSTATE: HY000
  Message: While leaving the group due to a stop, shutdown or failure there was a timeout receiving a view change. This can lead to a possible inconsistent state. Check the log for more details.
  ER_GRP_RPL_TIMEOUT_RECEIVING_VIEW_CHANGE_ON_SHUTDOWN was added in 8.0.11.

- **Error number:** MY-011649; Symbol:
  ER_GRP_RPL_REQUESTING_NON_MEMBER_SERVER_TO_LEAVE; SQLSTATE: HY000
  Message: Requesting to leave the group despite of not being a member.
  ER_GRP_RPL_REQUESTING_NON_MEMBER_SERVER_TO_LEAVE was added in 8.0.11.

- **Error number:** MY-011650; Symbol:
  ER_GRP_RPL_IS_STOPPING; SQLSTATE: HY000
  Message: Plugin 'group_replication' is stopping.
  ER_GRP_RPL_IS_STOPPING was added in 8.0.11.

- **Error number:** MY-011651; Symbol:
  ER_GRP_RPL_IS_STOPPED; SQLSTATE: HY000
  Message: Plugin 'group_replication' has been stopped.
  ER_GRP_RPL_IS_STOPPED was added in 8.0.11.

- **Error number:** MY-011652; Symbol:
  ER_GRP_RPL_FAILED_TO_ENABLE_READ_ONLY_MODE_ON_SHUTDOWN; SQLSTATE: HY000
  Message: On plugin shutdown it was not possible to enable the server read only mode. Local transactions will be accepted and committed.
  ER_GRP_RPL_FAILED_TO_ENABLE_READ_ONLY_MODE_ON_SHUTDOWN was added in 8.0.11.

- **Error number:** MY-011653; Symbol:
  ER_GRP_RPL_RECOVERY_MODULE_TERMINATION_TIMED_OUT_ON_SHUTDOWN; SQLSTATE: HY000
  Message: On shutdown there was a timeout on the Group Replication recovery module termination. Check the log for more details.
  ER_GRP_RPL_RECOVERY_MODULE_TERMINATION_TIMED_OUT_ON_SHUTDOWN was added in 8.0.11.

- **Error number:** MY-011654; Symbol:
  ER_GRP_RPL_APPLIER_TERMINATION_TIMED_OUT_ON_SHUTDOWN; SQLSTATE: HY000
  Message: On shutdown there was a timeout on the Group Replication applier termination.
  ER_GRP_RPL_APPLIER_TERMINATION_TIMED_OUT_ON_SHUTDOWN was added in 8.0.11.

- **Error number:** MY-011655; Symbol:
  ER_GRP_RPL_FAILED_TO_SHUTDOWN_REGISTRY_MODULE; SQLSTATE: HY000
  Message: Unexpected failure while shutting down registry module!
  ER_GRP_RPL_FAILED_TO_SHUTDOWN_REGISTRY_MODULE was added in 8.0.11.

- **Error number:** MY-011656; Symbol:
  ER_GRP_RPL_FAILED_TO_INIT_HANDLER; SQLSTATE: HY000
  Message: Failure during Group Replication handler initialization.
Server Error Message Reference

**ER_GRP_RPL_FAILED_TO_INIT_HANDLER** was added in 8.0.11.

- Error number: MY-011657; Symbol:
  `ER_GRP_RPL_FAILED_TO_REGISTER_SERVER_STATE_OBSERVER; SQLSTATE: HY000`
  Message: Failure when registering the server state observers

**ER_GRP_RPL_FAILED_TO_REGISTER_SERVER_STATE_OBSERVER** was added in 8.0.11.

- Error number: MY-011658; Symbol:
  `ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_STATE_OBSERVER; SQLSTATE: HY000`
  Message: Failure when registering the transactions state observers

**ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_STATE_OBSERVER** was added in 8.0.11.

- Error number: MY-011659; Symbol:
  `ER_GRP_RPL_FAILED_TO_REGISTER_BINLOG_STATE_OBSERVER; SQLSTATE: HY000`
  Message: Failure when registering the binlog state observers

**ER_GRP_RPL_FAILED_TO_REGISTER_BINLOG_STATE_OBSERVER** was added in 8.0.11.

- Error number: MY-011660; Symbol:
  `ER_GRP_RPL_FAILED_TO_START_ON_BOOT; SQLSTATE: HY000`
  Message: Unable to start Group Replication on boot

**ER_GRP_RPL_FAILED_TO_START_ON_BOOT** was added in 8.0.11.

- Error number: MY-011661; Symbol:
  `ER_GRP_RPL_FAILED_TO_STOP_ON_PLUGIN_UNINSTALL; SQLSTATE: HY000`
  Message: Failure when stopping Group Replication on plugin uninstall

**ER_GRP_RPL_FAILED_TO_STOP_ON_PLUGIN_UNINSTALL** was added in 8.0.11.

- Error number: MY-011662; Symbol:
  `ER_GRP_RPL_FAILED_TO_UNREGISTER_SERVER_STATE_OBSERVER; SQLSTATE: HY000`
  Message: Failure when unregistering the server state observers

**ER_GRP_RPL_FAILED_TO_UNREGISTER_SERVER_STATE_OBSERVER** was added in 8.0.11.

- Error number: MY-011663; Symbol:
  `ER_GRP_RPL_FAILED_TO_UNREGISTER_TRANS_STATE_OBSERVER; SQLSTATE: HY000`
  Message: Failure when unregistering the transactions state observers

**ER_GRP_RPL_FAILED_TO_UNREGISTER_TRANS_STATE_OBSERVER** was added in 8.0.11.

- Error number: MY-011664; Symbol:
  `ER_GRP_RPL_FAILED_TO_UNREGISTER_BINLOG_STATE_OBSERVER; SQLSTATE: HY000`
  Message: Failure when unregistering the binlog state observers

**ER_GRP_RPL_FAILED_TO_UNREGISTER_BINLOG_STATE_OBSERVER** was added in 8.0.11.

- Error number: MY-011665; Symbol:
  `ER_GRP_RPL_ALL_OBSERVERS_UNREGISTERED; SQLSTATE: HY000`
  Message: All Group Replication server observers have been successfully unregistered
**Server Error Message Reference**

**ER_GRP_RPL_ALL_OBSERVERS_UNREGISTERED** was added in 8.0.11.

- **Error number:** MY-011666; **Symbol:** ER_GRP_RPL_FAILED_TO_PARSE_THE_GRP_NAME; **SQLSTATE:** HY000
  
  Message: Unable to parse the group name.

**ER_GRP_RPL_FAILED_TO_PARSE_THE_GRP_NAME** was added in 8.0.11.

- **Error number:** MY-011667; **Symbol:** ER_GRP_RPL_FAILED_TO_GENERATE_SIDNO_FOR_GRP; **SQLSTATE:** HY000
  
  Message: Unable to parse the group name.

**ER_GRP_RPL_FAILED_TO_GENERATE_SIDNO_FOR_GRP** was added in 8.0.11.

- **Error number:** MY-011668; **Symbol:** ER_GRP_RPL_APPLIER_NOT_STARTED_DUE_TO_RUNNING_PREV_SHUTDOWN; **SQLSTATE:** HY000
  
  Message: Cannot start the Group Replication applier as a previous shutdown is still running: The thread will stop once its task is complete.

**ER_GRP_RPL_APPLIER_NOT_STARTED_DUE_TO_RUNNING_PREV_SHUTDOWN** was added in 8.0.11.

- **Error number:** MY-011669; **Symbol:** ER_GRP_RPL_FAILED_TO_INIT_APPLIER_MODULE; **SQLSTATE:** HY000
  
  Message: Unable to initialize the Group Replication applier module.

**ER_GRP_RPL_FAILED_TO_INIT_APPLIER_MODULE** was added in 8.0.11.

- **Error number:** MY-011670; **Symbol:** ER_GRP_RPL_APPLIER_INITIALIZED; **SQLSTATE:** HY000
  
  Message: Group Replication applier module successfully initialized!

**ER_GRP_RPL_APPLIER_INITIALIZED** was added in 8.0.11.

- **Error number:** MY-011671; **Symbol:** ER_GRP_RPL_COMMUNICATION_SSL_CONF_INFO; **SQLSTATE:** HY000
  
  Message: Group communication SSL configuration: group_replication_ssl_mode: "%s"; server_key_file: "%s"; server_cert_file: "%s"; client_key_file: "%s"; client_cert_file: "%s"; ca_file: "%s"; ca_path: "%s"; cipher: "%s"; tls_version: "%s"; tls_ciphersuites: "%s"; crl_file: "%s"; crl_path: "%s"; ssl_fips_mode: "%s"

**ER_GRP_RPL_COMMUNICATION_SSL_CONF_INFO** was added in 8.0.11.

- **Error number:** MY-011672; **Symbol:** ER_GRP_RPL_ABORTS_AS_SSL_NOT_SUPPORTED_BY_MYSQLD; **SQLSTATE:** HY000
  
  Message: MySQL server does not have SSL support and group_replication_ssl_mode is "%s", START GROUP_REPLICATION will abort

**ER_GRP_RPL_ABORTS_AS_SSL_NOT_SUPPORTED_BY_MYSQLD** was added in 8.0.11.

- **Error number:** MY-011673; **Symbol:** ER_GRP_RPL_SSL_DISABLED; **SQLSTATE:** HY000
  
  Message: Group communication SSL configuration: group_replication_ssl_mode: "%s"

**ER_GRP_RPL_SSL_DISABLED** was added in 8.0.11.
• Error number: MY-011674; Symbol: ER_GRP_RPL_UNABLE_TO_INIT_COMMUNICATION_ENGINE; SQLSTATE: HY000
Message: Unable to initialize the group communication engine
ER_GRP_RPL_UNABLE_TO_INIT_COMMUNICATION_ENGINE was added in 8.0.11.

• Error number: MY-011675; Symbol: ER_GRP_RPL_BINLOG_DISABLED; SQLSTATE: HY000
Message: Binlog must be enabled for Group Replication
ER_GRP_RPL_BINLOG_DISABLED was added in 8.0.11.

• Error number: MY-011676; Symbol: ER_GRP_RPL_GTID_MODE_OFF; SQLSTATE: HY000
Message: Gtid mode should be ON for Group Replication
ER_GRP_RPL_GTID_MODE_OFF was added in 8.0.11.

• Error number: MY-011677; Symbol: ER_GRP_RPL_LOG_SLAVE_UPDATES_NOT_SET; SQLSTATE: HY000
Message: LOG_SLAVE_UPDATES should be ON for Group Replication
ER_GRP_RPL_LOG_SLAVE_UPDATES_NOT_SET was added in 8.0.11.

• Error number: MY-011678; Symbol: ER_GRP_RPL_INVALID_TRANS_WRITE_SET_EXTRACTION_VALUE; SQLSTATE: HY000
Message: Extraction of transaction write sets requires an hash algorithm configuration. Please, double check that the parameter transaction-write-set-extraction is set to a valid algorithm.
ER_GRP_RPL_INVALID_TRANS_WRITE_SET_EXTRACTION_VALUE was added in 8.0.11.

• Error number: MY-011679; Symbol: ER_GRP_RPL_RELAY_LOG_INFO_REPO_MUST_BE_TABLE; SQLSTATE: HY000
Message: Relay log info repository must be set to TABLE
ER_GRP_RPL_RELAY_LOG_INFO_REPO_MUST_BE_TABLE was added in 8.0.11.

• Error number: MY-011680; Symbol: ER_GRP_RPL_MASTER_INFO_REPO_MUST_BE_TABLE; SQLSTATE: HY000
Message: Master info repository must be set to TABLE.
ER_GRP_RPL_MASTER_INFO_REPO_MUST_BE_TABLE was added in 8.0.11.

• Error number: MY-011681; Symbol: ER_GRP_RPL_INCORRECT_TYPE_SET_FOR_PARALLEL_APPLIER; SQLSTATE: HY000
Message: In order to use parallel applier on Group Replication, parameter slave-parallel-type must be set to 'LOGICAL_CLOCK'.
ER_GRP_RPL_INCORRECT_TYPE_SET_FOR_PARALLEL_APPLIER was added in 8.0.11.

• Error number: MY-011682; Symbol: ER_GRP_RPL_SLAVE_PRESERVE_COMMIT_ORDER_NOT_SET; SQLSTATE: HY000
Message: Group Replication requires slave-preserve-commit-order to be set to ON when using more than 1 applier threads.
ER_GRP_RPL_SLAVE_PRESERVE_COMMIT_ORDER_NOT_SET was added in 8.0.11.
Server Error Message Reference

  SQLSTATE: HY000
  Message: Error running internal SQL query: %s. The internal server session was killed or server is shutting down.
  `ER_GRP_RPL_SQL_SERVICE_SERVER_SESSION_KILLED` was added in 8.0.11.

- Error number: MY-011704; Symbol: ER_GRP_RPL_SQL_SERVICE_FAILED_TO_RUN_SQL_QUERY;
  SQLSTATE: HY000
  Message: Error running internal SQL query: %s. Got internal SQL error: %s(%d)
  `ER_GRP_RPL_SQL_SERVICE_FAILED_TO_RUN_SQL_QUERY` was added in 8.0.11.

- Error number: MY-011705; Symbol: ER_GRP_RPL_SQL_SERVICE_SERVER_INTERNAL_FAILURE;
  SQLSTATE: HY000
  Message: Error running internal SQL query: %s. Internal failure.
  `ER_GRP_RPL_SQL_SERVICE_SERVER_INTERNAL_FAILURE` was added in 8.0.11.

- Error number: MY-011706; Symbol:
  `ER_GRP_RPL_SQL_SERVICE_RETRIES_EXCEEDED_ON_SESSION_STATE`; SQLSTATE: HY000
  Message: Error, maximum number of retries exceeded when waiting for the internal server session state to be operating
ER_GRP_RPL_SQL_SERVICE_RETRIES_EXCEEDED_ON_SESSION_STATE was added in 8.0.11.

- Error number: MY-011707; Symbol: ER_GRP_RPL_SQL_SERVICE_FAILED_TO_FETCH_SECURITY_CTX; SQLSTATE: HY000
  Message: Error when trying to fetch security context when contacting the server for internal plugin requests.

ER_GRP_RPL_SQL_SERVICE_FAILED_TO_FETCH_SECURITY_CTX was added in 8.0.11.

- Error number: MY-011708; Symbol: ER_GRP_RPL_SQL_SERVICE_SERVER_ACCESS_DENIED_FOR_USER; SQLSTATE: HY000
  Message: There was an error when trying to access the server with user: '%s'. Make sure the user is present in the server and that the MySQL upgrade procedure was run correctly.

ER_GRP_RPL_SQL_SERVICE_SERVER_ACCESS_DENIED_FOR_USER was added in 8.0.11.

- Error number: MY-011709; Symbol: ER_GRP_RPL_SQL_SERVICE_MAX_CONN_ERROR_FROM_SERVER; SQLSTATE: HY000
  Message: Failed to establish an internal server connection to execute plugin operations since the server does not have available connections, please increase @@GLOBAL.MAX_CONNECTIONS. Server error: %i.

ER_GRP_RPL_SQL_SERVICE_MAX_CONN_ERROR_FROM_SERVER was added in 8.0.11.

- Error number: MY-011710; Symbol: ER_GRP_RPL_SQL_SERVICE_SERVER_ERROR_ON_CONN; SQLSTATE: HY000
  Message: Failed to establish an internal server connection to execute plugin operations. Server error: %i. Server error message: %s

ER_GRP_RPL_SQL_SERVICE_SERVER_ERROR_ON_CONN was added in 8.0.11.

- Error number: MY-011711; Symbol: ER_GRP_RPL_UNREACHABLE_MAJORITY_TIMEOUT_FOR_MEMBER; SQLSTATE: HY000
  Message: This member could not reach a majority of the members for more than %ld seconds. The member will now leave the group as instructed by the group_replication_unreachable_majority_timeout option.

ER_GRP_RPL_UNREACHABLE_MAJORITY_TIMEOUT_FOR_MEMBER was added in 8.0.11.

- Error number: MY-011712; Symbol: ER_GRP_RPL_SERVER_SET_TO_READ_ONLY_DUE_TO_ERRORS; SQLSTATE: HY000
  Message: The server was automatically set into read only mode after an error was detected.

ER_GRP_RPL_SERVER_SET_TO_READ_ONLY_DUE_TO_ERRORS was added in 8.0.11.

- Error number: MY-011713; Symbol: ER_GRP_RPL_GMS_LISTENER_FAILED_TO_LOG_NOTIFICATION; SQLSTATE: HY000
  Message: Unable to log notification to table (errno: %lu) (res: %d)! Message: %s

ER_GRP_RPL_GMS_LISTENER_FAILED_TO_LOG_NOTIFICATION was added in 8.0.11.

- Error number: MY-011714; Symbol: ER_GRP_RPL_GRP_COMMUNICATION_ENG_INIT_FAILED; SQLSTATE: HY000
  Message: Failure in group communication engine '%s' initialization
ER_GRP_RPL_GRP_COMMUNICATION_ENG_INIT_FAILED was added in 8.0.11.

- Error number: MY-011715; Symbol: ER_GRP_RPL_SET_GRP_COMMUNICATION_ENG_LOGGER_FAILED; SQLSTATE: HY000
  Message: Unable to set the group communication engine logger

ER_GRP_RPL_SET_GRP_COMMUNICATION_ENG_LOGGER_FAILED was added in 8.0.11.

- Error number: MY-011716; Symbol: ER_GRP_RPL_DEBUG_OPTIONS; SQLSTATE: HY000
  Message: Current debug options are: '%s'.

ER_GRP_RPL_DEBUG_OPTIONS was added in 8.0.11.

- Error number: MY-011717; Symbol: ER_GRP_RPL_INVALID_DEBUG_OPTIONS; SQLSTATE: HY000
  Message: Some debug options in '%s' are not valid.

ER_GRP_RPL_INVALID_DEBUG_OPTIONS was added in 8.0.11.

- Error number: MY-011718; Symbol: ER_GRP_RPL_EXIT_GRP_GCS_ERROR; SQLSTATE: HY000
  Message: Error calling group communication interfaces while trying to leave the group

ER_GRP_RPL_EXIT_GRP_GCS_ERROR was added in 8.0.11.

- Error number: MY-011719; Symbol: ER_GRP_RPL_GRP_MEMBER_OFFLINE; SQLSTATE: HY000
  Message: Member is not ONLINE, it is not possible to force a new group membership

ER_GRP_RPL_GRP_MEMBER_OFFLINE was added in 8.0.11.

- Error number: MY-011720; Symbol: ER_GRP_RPL_GCS_INTERFACE_ERROR; SQLSTATE: HY000
  Message: Error calling group communication interfaces

ER_GRP_RPL_GCS_INTERFACE_ERROR was added in 8.0.11.

- Error number: MY-011721; Symbol: ER_GRP_RPL_FORCE_MEMBER_VALUE_SET_ERROR; SQLSTATE: HY000
  Message: Error setting group_replication_force_members value '%s' on group communication interfaces

ER_GRP_RPL_FORCE_MEMBER_VALUE_SET_ERROR was added in 8.0.11.

- Error number: MY-011722; Symbol: ER_GRP_RPL_FORCE_MEMBER_VALUE_SET; SQLSTATE: HY000
  Message: The group_replication_force_members value '%s' was set in the group communication interfaces

ER_GRP_RPL_FORCE_MEMBER_VALUE_SET was added in 8.0.11.

- Error number: MY-011723; Symbol: ER_GRP_RPL_FORCE_MEMBER_VALUE_TIME_OUT; SQLSTATE: HY000
  Message: Timeout on wait for view after setting group_replication_force_members value '%s' into group communication interfaces

ER_GRP_RPL_FORCE_MEMBER_VALUE_TIME_OUT was added in 8.0.11.
•   Error number: MY-011724; Symbol: ER_GRP_RPL_BROADCAST_COMMIT_MSSG_TOO_BIG; SQLSTATE: HY000
Message: Broadcast of committed transactions message failed. Message is too big.
ER_GRP_RPL_BROADCAST_COMMIT_MSSG_TOO_BIG was added in 8.0.11.

•   Error number: MY-011725; Symbol: ER_GRP_RPL_SEND_STATS_ERROR; SQLSTATE: HY000
Message: Error while sending stats message
ER_GRP_RPL_SEND_STATS_ERROR was added in 8.0.11.

•   Error number: MY-011726; Symbol: ER_GRP_RPL_MEMBER_STATS_INFO; SQLSTATE: HY000
Message: Flow control - update member stats: %s stats certifier_queue %ld, applier_queue %ld
certified %ld (%ld), applied %ld (%ld), local %ld (%ld), quota %ld (%ld) mode=%d
ER_GRP_RPL_MEMBER_STATS_INFO was added in 8.0.11.

•   Error number: MY-011727; Symbol: ER_GRP_RPL_FLOW_CONTROL_STATS; SQLSTATE: HY000
Message: Flow control: throttling to %ld commits per %ld sec, with %d writing and %d non-
recovering members, min capacity %ld, lim throttle %ld
ER_GRP_RPL_FLOW_CONTROL_STATS was added in 8.0.11.

•   Error number: MY-011728; Symbol: ER_GRP_RPL_UNABLE_TO_CONVERT_PACKET_TO_EVENT; SQLSTATE: HY000
Message: Unable to convert a packet into an event on the applier. Error: %s
ER_GRP_RPL_UNABLE_TO_CONVERT_PACKET_TO_EVENT was added in 8.0.11.

•   Error number: MY-011729; Symbol: ER_GRP_RPL_PIPELINE_CREATE_FAILED; SQLSTATE: HY000
Message: Failed to create group replication pipeline cache.
ER_GRP_RPL_PIPELINE_CREATE_FAILED was added in 8.0.11.

•   Error number: MY-011730; Symbol: ER_GRP_RPL_PIPELINE_REINIT_FAILED_WRITE; SQLSTATE: HY000
Message: Failed to reinit group replication pipeline cache for write.
ER_GRP_RPL_PIPELINE_REINIT_FAILED_WRITE was added in 8.0.11.

•   Error number: MY-011731; Symbol: ER_GRP_RPL_UNABLE_TO_CONVERT_EVENT_TO_PACKET; SQLSTATE: HY000
Message: Unable to convert the event into a packet on the applier. Error: %s
ER_GRP_RPL_UNABLE_TO_CONVERT_EVENT_TO_PACKET was added in 8.0.11.

•   Error number: MY-011732; Symbol: ER_GRP_RPL_PIPELINE_FLUSH_FAIL; SQLSTATE: HY000
Message: Failed to flush group replication pipeline cache.
ER_GRP_RPL_PIPELINE_FLUSH_FAIL was added in 8.0.11.

•   Error number: MY-011733; Symbol: ER_GRP_RPL_PIPELINE_REINIT_FAILED_READ; SQLSTATE: HY000
Message: Failed to reinit group replication pipeline cache for read.

**ER_GRP_RPL_PIPELINE_REINIT_FAILED_READ** was added in 8.0.11.

- Error number: MY-011734; Symbol: **ER_GRP_RPL_STOP_REP_CHANNEL**; SQLSTATE: HY000
  
  Message: Error stopping all replication channels while server was leaving the group. Got error: %d. Please check the error log for more details.

  **ER_GRP_RPL_STOP_REP_CHANNEL** was added in 8.0.11, removed after 8.0.17.

- Error number: MY-011735; Symbol: **ER_GRP_RPL_GCS_GR_ERROR_MSG**; SQLSTATE: HY000
  
  Message: %s

  **ER_GRP_RPL_GCS_GR_ERROR_MSG** was added in 8.0.11.

- Error number: MY-011736; Symbol: **ER_GRP_RPL_SLAVE_IO_THREAD_UNBLOCKED**; SQLSTATE: HY000
  
  Message: The slave IO thread of channel '%s' is unblocked as the member is declared ONLINE now.

  **ER_GRP_RPL_SLAVE_IO_THREAD_UNBLOCKED** was added in 8.0.11.

- Error number: MY-011737; Symbol: **ER_GRP_RPL_SLAVE_IO_THREAD_ERROR_OUT**; SQLSTATE: HY000
  
  Message: The slave IO thread of channel '%s' will error out as the member failed to come ONLINE.

  **ER_GRP_RPL_SLAVE_IO_THREAD_ERROR_OUT** was added in 8.0.11.

- Error number: MY-011738; Symbol: **ER_GRP_RPL_SLAVE_APPLIER_THREAD_UNBLOCKED**; SQLSTATE: HY000
  
  Message: The slave applier thread of channel '%s' is unblocked as the member is declared ONLINE now.

  **ER_GRP_RPL_SLAVE_APPLIER_THREAD_UNBLOCKED** was added in 8.0.11.

- Error number: MY-011739; Symbol: **ER_GRP_RPL_SLAVE_APPLIER_THREAD_ERROR_OUT**; SQLSTATE: HY000
  
  Message: The slave applier thread of channel '%s' will error out as the member failed to come ONLINE.

  **ER_GRP_RPL_SLAVE_APPLIER_THREAD_ERROR_OUT** was added in 8.0.11.

- Error number: MY-011740; Symbol: **ER_LDAP_AUTH_FAILED_TO_CREATE_OR_GET_CONNECTION**; SQLSTATE: HY000
  
  Message: LDAP authentication initialize: failed to create/ get connection from the pool.

  **ER_LDAP_AUTH_FAILED_TO_CREATE_OR_GET_CONNECTION** was added in 8.0.11.

- Error number: MY-011741; Symbol: **ER_LDAP_AUTH_DEINIT_FAILED**; SQLSTATE: HY000
  
  Message: LDAP authentication de_initialize Failed

  **ER_LDAP_AUTH_DEINIT_FAILED** was added in 8.0.11.

Message: Failed to pool de-initialized: pool is already reconstructing

ER_LDAP_AUTH_FAILED_TO_POOL_DEINIT was added in 8.0.11.

•   Error number: MY-011767; Symbol: ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_RECONSTRUCTING; SQLSTATE: HY000
Message: Pool initialization failed: pool is already initialized

ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_RECONSTRUCTING was added in 8.0.11.

•   Error number: MY-011768; Symbol: ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_INIT_STATE; SQLSTATE: HY000
Message: Pool initialization failed: pool is initializing

ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_INIT_STATE was added in 8.0.11.

•   Error number: MY-011769; Symbol: ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_DEINIT_STATE; SQLSTATE: HY000
Message: Pool initialization failed: pool is de-initializing

ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_DEINIT_STATE was added in 8.0.11.

•   Error number: MY-011770; Symbol: ER_LDAP_AUTH_FAILED_TO_DEINITIALIZE_POOL_IN_RECONSTRUCT_STATE; SQLSTATE: HY000
Message: Failed to pool deinitialized: pool is already reconstructing

ER_LDAP_AUTH_FAILED_TO_DEINITIALIZE_POOL_IN_RECONSTRUCT_STATE was added in 8.0.11.

• Error number: MY-011771; Symbol: ER_LDAP_AUTH_FAILED_TO_DEINITIALIZE_NOT_READY_POOL; SQLSTATE: HY000

Message: Failed to pool deinitialized : pool is not ready

ER_LDAP_AUTH_FAILED_TO_DEINITIALIZE_NOT_READY_POOL was added in 8.0.11.

• Error number: MY-011772; Symbol: ER_LDAP_AUTH_FAILED_TO_GET_CONNECTION_AS_PLUGIN_NOT_READY; SQLSTATE: HY000

Message: Ldap_connection_pool::get: Failed to return connection as plug-in is not ready/initializing/ de-initializing

ER_LDAP_AUTH_FAILED_TO_GET_CONNECTION_AS_PLUGIN_NOT_READY was added in 8.0.11.

• Error number: MY-011773; Symbol: ER_LDAP_AUTH_CONNECTION_POOL_INIT_FAILED; SQLSTATE: HY000

Message: Connection pool has failed to initialized

ER_LDAP_AUTH_CONNECTION_POOL_INIT_FAILED was added in 8.0.11.

• Error number: MY-011774; Symbol: ER_LDAP_AUTH_MAX_ALLOWED_CONNECTION_LIMIT_HIT; SQLSTATE: HY000

Message: Ldap_connetion_pool::get LDAP maximum connection allowed size is reached. Increase the maximum limit.

ER_LDAP_AUTH_MAX_ALLOWED_CONNECTION_LIMIT_HIT was added in 8.0.11.

• Error number: MY-011775; Symbol: ER_LDAP_AUTH_MAX_POOL_SIZE_SET_FAILED; SQLSTATE: HY000

Message: Set max pool size failed.

ER_LDAP_AUTH_MAX_POOL_SIZE_SET_FAILED was added in 8.0.11.

• Error number: MY-011776; Symbol: ER_LDAP_AUTH_PLUGIN_FAILED_TO_READ_PACKET; SQLSTATE: HY000

Message: Plug-in has failed to read the packet from client

ER_LDAP_AUTH_PLUGIN_FAILED_TO_READ_PACKET was added in 8.0.11.

• Error number: MY-011777; Symbol: ER_LDAP_AUTH_CREATING_LDAP_CONNECTION; SQLSTATE: HY000

Message: Ldap_authentication::initialize: creating new LDAP connection.

ER_LDAP_AUTH_CREATING_LDAP_CONNECTION was added in 8.0.11.

• Error number: MY-011778; Symbol: ER_LDAP_AUTH_GETTING_CONNECTION_FROM_POOL; SQLSTATE: HY000

Message: Ldap_authentication::initialize: getting connection from pool.

ER_LDAP_AUTH_GETTING_CONNECTION_FROM_POOL was added in 8.0.11.
• Error number: MY-011779; Symbol: ER_LDAP_AUTH_RETURNING_CONNECTION_TO_POOL; SQLSTATE: HY000
  Message: Ldap_authentication::de_initialize putting back connection in the pool
  ER_LDAP_AUTH_RETURNING_CONNECTION_TO_POOL was added in 8.0.11.

• Error number: MY-011780; Symbol: ER_LDAP_AUTH_SEARCH_USER_GROUP_ATTR_NOT_FOUND; SQLSTATE: HY000
  Message: Ldap_authentication::search_user_group no group attribute found
  ER_LDAP_AUTH_SEARCH_USER_GROUP_ATTR_NOT_FOUND was added in 8.0.11.

• Error number: MY-011781; Symbol: ER_LDAP_AUTH_LDAP_INFO_NULL; SQLSTATE: HY000
  Message: Ldap_connecion_pool::put ldap info null
  ER_LDAP_AUTH_LDAP_INFO_NULL was added in 8.0.11.

• Error number: MY-011782; Symbol: ER_LDAP_AUTH_FREEING_CONNECTION; SQLSTATE: HY000
  Message: Ldap_connection_pool::put connection is freeing.
  ER_LDAP_AUTH_FREEING_CONNECTION was added in 8.0.11.

• Error number: MY-011783; Symbol: ER_LDAP_AUTH_CONNECTION_PUSHED_TO_POOL; SQLSTATE: HY000
  Message: Ldap_connection_pool::put connection in pushed in the pool
  ER_LDAP_AUTH_CONNECTION_PUSHED_TO_POOL was added in 8.0.11.

• Error number: MY-011784; Symbol: ER_LDAP_AUTH_CONNECTION_CREATOR_ENTER; SQLSTATE: HY000
  Message: Ldap_connection_creator::Ldap_connection_creator
  ER_LDAP_AUTH_CONNECTION_CREATOR_ENTER was added in 8.0.11.

• Error number: MY-011785; Symbol: ER_LDAP_AUTH_STARTING_TLS; SQLSTATE: HY000
  Message: starting TLS
  ER_LDAP_AUTH_STARTING_TLS was added in 8.0.11.

• Error number: MY-011786; Symbol: ER_LDAP_AUTH_CONNECTION_GET_LDAP_INFO_NULL; SQLSTATE: HY000
  Message: Ldap_connection_pool::get: (ldap_info == NULL)|| (*ldap_info)
  ER_LDAP_AUTH_CONNECTION_GET_LDAP_INFO_NULL was added in 8.0.11.

• Error number: MY-011787; Symbol: ER_LDAP_AUTH_DELETING_CONNECTION_KEY; SQLSTATE: HY000
  Message: Ldap_connection_pool::deinit: deleting connection key %s
  ER_LDAP_AUTH_DELETING_CONNECTION_KEY was added in 8.0.11.

• Error number: MY-011788; Symbol: ER_LDAP_AUTH_POOLED_CONNECTION_KEY; SQLSTATE: HY000
Message: Ldap_connection_pool::get pooled connection key: %s

ER_LDAP_AUTH_POOLED_CONNECTION_KEY was added in 8.0.11.

•   Error number: MY-011789; Symbol: ER_LDAP_AUTH_CREATE_CONNECTION_KEY; SQLSTATE: HY000

Message: Ldap_connection_pool::get create connection key: %s

ER_LDAP_AUTH_CREATE_CONNECTION_KEY was added in 8.0.11.

•   Error number: MY-011790; Symbol: ER_LDAP_AUTH_COMMUNICATION_HOST_INFO; SQLSTATE: HY000

Message: LDAP communication host %s port %u

ER_LDAP_AUTH_COMMUNICATION_HOST_INFO was added in 8.0.11.

•   Error number: MY-011791; Symbol: ER_LDAP_AUTH_METHOD_TO_CLIENT; SQLSTATE: HY000

Message: Sending authentication method to client : %s

ER_LDAP_AUTH_METHOD_TO_CLIENT was added in 8.0.11.

•   Error number: MY-011792; Symbol: ER_LDAP_AUTH_SASL_REQUEST_FROM_CLIENT; SQLSTATE: HY000

Message: SASL request received from mysql client: %s

ER_LDAP_AUTH_SASL_REQUEST_FROM_CLIENT was added in 8.0.11.

•   Error number: MY-011793; Symbol: ER_LDAP_AUTH_SASL_PROCESS_SASL; SQLSTATE: HY000

Message: Ldap_sasl_authentication::process_sasl rc: %s

ER_LDAP_AUTH_SASL_PROCESS_SASL was added in 8.0.11.

•   Error number: MY-011794; Symbol: ER_LDAP_AUTH_SASL_BIND_SUCCESS_INFO; SQLSTATE: HY000

Message: Ldap_sasl_authentication::process_sasl sasl bind succeed. dn: %s method: %s server credential: %s

ER_LDAP_AUTH_SASL_BIND_SUCCESS_INFO was added in 8.0.11.

•   Error number: MY-011795; Symbol: ER_LDAP_AUTH_STARTED_FOR_USER; SQLSTATE: HY000

Message: LDAP authentication started for user name: %s

ER_LDAP_AUTH_STARTED_FOR_USER was added in 8.0.11.

•   Error number: MY-011796; Symbol: ER_LDAP_AUTH_DISTINGUISHED_NAME; SQLSTATE: HY000

Message: %s

ER_LDAP_AUTH_DISTINGUISHED_NAME was added in 8.0.11.

•   Error number: MY-011797; Symbol: ER_LDAP_AUTH_INIT_FAILED; SQLSTATE: HY000

Message: LDAP authentication initialize is failed with: %s

ER_LDAP_AUTH_INIT_FAILED was added in 8.0.11.
• Error number: MY-011798; Symbol: ER_LDAP_AUTH_OR_GROUP_RETRIEVAL_FAILED; SQLSTATE: HY000
  Message: LDAP authentication failed or group retrieval failed: %s
  ER_LDAP_AUTH_OR_GROUP_RETRIEVAL_FAILED was added in 8.0.11.

• Error number: MY-011799; Symbol: ER_LDAP_AUTH_USER_GROUP_SEARCH_FAILED; SQLSTATE: HY000
  Message: Search user group has failed: %s
  ER_LDAP_AUTH_USER_GROUP_SEARCH_FAILED was added in 8.0.11.

• Error number: MY-011800; Symbol: ER_LDAP_AUTH_USER_BIND_FAILED; SQLSTATE: HY000
  Message: LDAP user bind has failed: %s
  ER_LDAP_AUTH_USER_BIND_FAILED was added in 8.0.11.

• Error number: MY-011801; Symbol: ER_LDAP_AUTH_POOL_GET_FAILED_TO_CREATE_CONNECTION; SQLSTATE: HY000
  Message: Connection pool get: Failed to create LDAP connection. %s
  ER_LDAP_AUTH_POOL_GET_FAILED_TO_CREATE_CONNECTION was added in 8.0.11.

• Error number: MY-011802; Symbol: ER_LDAP_AUTH_FAILED_TO_CREATE_LDAP_CONNECTION; SQLSTATE: HY000
  Message: Failed to create new LDAP connection: %s
  ER_LDAP_AUTH_FAILED_TO_CREATE_LDAP_CONNECTION was added in 8.0.11.

• Error number: MY-011803; Symbol: ER_LDAP_AUTH_FAILED_TO_ESTABLISH_TLS_CONNECTION; SQLSTATE: HY000
  Message: Failed to establish TLS connection: %s
  ER_LDAP_AUTH_FAILED_TO_ESTABLISH_TLS_CONNECTION was added in 8.0.11.

• Error number: MY-011804; Symbol: ER_LDAP_AUTH_FAILED_TO_SEARCH_DN; SQLSTATE: HY000
  Message: Failed to search user full dn: %s
  ER_LDAP_AUTH_FAILED_TO_SEARCH_DN was added in 8.0.11.

• Error number: MY-011805; Symbol: ER_LDAP_AUTH_CONNECTION_POOL_REINIT_ENTER; SQLSTATE: HY000
  Message: Ldap_connection_pool::reinit
  ER_LDAP_AUTH_CONNECTION_POOL_REINIT_ENTER was added in 8.0.11.

• Error number: MY-011806; Symbol: ER_SYSTEMD_NOTIFY_PATH_TOO_LONG; SQLSTATE: HY000
  Message: The path '%s', from the NOTIFY_SOCKET environment variable, is too long. At %u bytes it exceeds the limit of %u bytes for an AF_UNIX socket.
  ER_SYSTEMD_NOTIFY_PATH_TOO_LONG was added in 8.0.11.
Server Error Message Reference

- **Error number:** MY-011807; **Symbol:** ER_SYSTEMD_NOTIFY_CONNECT_FAILED; **SQLSTATE:** HY000
  
  Message: Failed to connect to systemd notification socket named `%s`. Error: '%s'

  ER_SYSTEMD_NOTIFY_CONNECT_FAILED was added in 8.0.11.

- **Error number:** MY-011808; **Symbol:** ER_SYSTEMD_NOTIFY_WRITE_FAILED; **SQLSTATE:** HY000
  
  Message: Failed to write '%s' to systemd notification. Error: '%s'

  ER_SYSTEMD_NOTIFY_WRITE_FAILED was added in 8.0.11.

- **Error number:** MY-011809; **Symbol:** ER_FOUND_MISSING_GTIDS; **SQLSTATE:** HY000
  
  Message: Cannot replicate to server with server_uuid='%s' because the present server has purged required binary logs. The connecting server needs to replicate the missing transactions from elsewhere, or be replaced by a new server created from a more recent backup. To prevent this error in the future, consider increasing the binary log expiration period on the present server. %s.

  ER_FOUND_MISSING_GTIDS was added in 8.0.11.

- **Error number:** MY-011810; **Symbol:** ER_PID_FILE_PRIV_DIRECTORY_INSECURE; **SQLSTATE:** HY000
  
  Message: Insecure configuration for --pid-file: Location '%s' in the path is accessible to all OS users. Consider choosing a different directory.

  ER_PID_FILE_PRIV_DIRECTORY_INSECURE was added in 8.0.11.

- **Error number:** MY-011811; **Symbol:** ER_CANT_CHECK_PID_PATH; **SQLSTATE:** HY000
  
  Message: Can't start server: can't check PID filepath: %s

  ER_CANT_CHECK_PID_PATH was added in 8.0.11.

- **Error number:** MY-011812; **Symbol:** ER_VALIDATE_PWD_STATUS_VAR_REGISTRATION_FAILED; **SQLSTATE:** HY000
  
  Message: validate_password status variables registration failed.

  ER_VALIDATE_PWD_STATUS_VAR_REGISTRATION_FAILED was added in 8.0.11.

- **Error number:** MY-011813; **Symbol:** ER_VALIDATE_PWD_STATUS_VAR_UNREGISTRATION_FAILED; **SQLSTATE:** HY000
  
  Message: validate_password status variables unregistration failed.

  ER_VALIDATE_PWD_STATUS_VAR_UNREGISTRATION_FAILED was added in 8.0.11.

- **Error number:** MY-011814; **Symbol:** ER_VALIDATE_PWD_DICT_FILE_OPEN_FAILED; **SQLSTATE:** HY000
  
  Message: Dictionary file open failed

  ER_VALIDATE_PWD_DICT_FILE_OPEN_FAILED was added in 8.0.11.

- **Error number:** MY-011815; **Symbol:** ER_VALIDATE_PWD_COULD_BE_NULL; **SQLSTATE:** HY000
  
  Message: given password string could be null

  ER_VALIDATE_PWD_COULD_BE_NULL was added in 8.0.11.
• Error number: MY-011816; Symbol: ER_VALIDATE_PWD_STRING_CONV_TO_LOWERCASE_FAILED; SQLSTATE: HY000
Message: failed to convert the password string to lower case
ER_VALIDATE_PWD_STRING_CONV_TO_LOWERCASE_FAILED was added in 8.0.11.

• Error number: MY-011817; Symbol: ER_VALIDATE_PWD_STRING_CONV_TO_BUFFER_FAILED; SQLSTATE: HY000
Message: failed to convert the password string into a buffer
ER_VALIDATE_PWD_STRING_CONV_TO_BUFFER_FAILED was added in 8.0.11.

• Error number: MY-011818; Symbol: ER_VALIDATE_PWD_STRING_HANDLER_MEM_ALLOCATION_FAILED; SQLSTATE: HY000
Message: memory allocation failed for string handler
ER_VALIDATE_PWD_STRING_HANDLER_MEM_ALLOCATION_FAILED was added in 8.0.11.

• Error number: MY-011819; Symbol: ER_VALIDATE_PWD_STRING_HANDLER_MEM_ALLOCATION_FAILED; SQLSTATE: HY000
Message: Since the validate_password_policy is mentioned as Strong, dictionary file must be specified
ER_VALIDATE_PWD_STRING_HANDLER_MEM_ALLOCATION_FAILED was added in 8.0.11.

• Error number: MY-011820; Symbol: ER_VALIDATE_PWD_CONVERT_TO_BUFFER_FAILED; SQLSTATE: HY000
Message: convert_to_buffer service failed
ER_VALIDATE_PWD_CONVERT_TO_BUFFER_FAILED was added in 8.0.11.

• Error number: MY-011821; Symbol: ER_VALIDATE_PWD_VARIABLE_REGISTRATION_FAILED; SQLSTATE: HY000
Message: %s variable registration failed.
ER_VALIDATE_PWD_VARIABLE_REGISTRATION_FAILED was added in 8.0.11.

• Error number: MY-011822; Symbol: ER_VALIDATE_PWD_VARIABLE_UNREGISTRATION_FAILED; SQLSTATE: HY000
Message: %s variable unregistration failed.
ER_VALIDATE_PWD_VARIABLE_UNREGISTRATION_FAILED was added in 8.0.11.

• Error number: MY-011823; Symbol: ER_KEYRING_MIGRATION_EXTRA_OPTIONS; SQLSTATE: HY000
Message: Please specify options specific to keyring migration. Any additional options can be ignored. NOTE: Although some options are valid, migration tool can still report error example: plugin variables for which plugin is not loaded yet.
ER_KEYRING_MIGRATION_EXTRA_OPTIONS was added in 8.0.11.

  Message: %s
  ER_IB_MSG_1120 was added in 8.0.11.

- **Error number:** MY-012946; Symbol: ER_IB_MSG_1121; SQLSTATE: HY000
  Message: %s
  ER_IB_MSG_1121 was added in 8.0.11.

- **Error number:** MY-012947; Symbol: ER_IB_MSG_1122; SQLSTATE: HY000
  Message: MySQL was built without a memory barrier capability on this architecture, which might allow a mutex/rw_lock violation under high thread concurrency. This may cause a hang.
  ER_IB_MSG_1122 was added in 8.0.11.

- **Error number:** MY-012948; Symbol: ER_IB_MSG_1123; SQLSTATE: HY000
  Message: Compressed tables use zlib %s
  ER_IB_MSG_1123 was added in 8.0.11.

- **Error number:** MY-012949; Symbol: ER_IB_MSG_1124; SQLSTATE: HY000
  Message: %s
  ER_IB_MSG_1124 was added in 8.0.11.

- **Error number:** MY-012950; Symbol: ER_IB_MSG_1125; SQLSTATE: HY000
  Message: Startup called second time during the process lifetime. In the MySQL Embedded Server Library you cannot call server_init() more than once during the process lifetime.
  ER_IB_MSG_1125 was added in 8.0.11.

- **Error number:** MY-012951; Symbol: ER_IB_MSG_1126; SQLSTATE: HY000
  Message: %s
  ER_IB_MSG_1126 was added in 8.0.11.

- **Error number:** MY-012952; Symbol: ER_IB_MSG_1127; SQLSTATE: HY000
  Message: Unable to create monitor file %s: %s
  ER_IB_MSG_1127 was added in 8.0.11.

- **Error number:** MY-012953; Symbol: ER_IB_MSG_1128; SQLSTATE: HY000
  Message: Disabling background log and ibuf IO write threads.
  ER_IB_MSG_1128 was added in 8.0.11.

- **Error number:** MY-012954; Symbol: ER_IB_MSG_1129; SQLSTATE: HY000
  Message: Cannot initialize AIO sub-system
  ER_IB_MSG_1129 was added in 8.0.11.
• Error number: MY-012955; Symbol: ER_IB_MSG_1130; SQLSTATE: HY000
  Message: Initializing buffer pool, total size = %lf%c, instances = %lu, chunk size =%lf%c
  ER_IB_MSG_1130 was added in 8.0.11.

• Error number: MY-012956; Symbol: ER_IB_MSG_1131; SQLSTATE: HY000
  Message: Cannot allocate memory for the buffer pool
  ER_IB_MSG_1131 was added in 8.0.11.

• Error number: MY-012957; Symbol: ER_IB_MSG_1132; SQLSTATE: HY000
  Message: Completed initialization of buffer pool
  ER_IB_MSG_1132 was added in 8.0.11.

• Error number: MY-012958; Symbol: ER_IB_MSG_1133; SQLSTATE: HY000
  Message: Small buffer pool size (%lluM), the flist_validate() debug function can cause a deadlock if
  the buffer pool fills up.
  ER_IB_MSG_1133 was added in 8.0.11.

• Error number: MY-012959; Symbol: ER_IB_MSG_1134; SQLSTATE: HY000
  Message: Could not open or create the system tablespace. If you tried to add new data files to the
  system tablespace, and it failed here, you should now edit innodb_data_file_path in my.cnf back
  to what it was, and remove the new ibdata files InnoDB created in this failed attempt. InnoDB only
  wrote those files full of zeros, but did not yet use them in any way. But be careful: do not remove old
  data files which contain your precious data!
  ER_IB_MSG_1134 was added in 8.0.11.

• Error number: MY-012960; Symbol: ER_IB_MSG_1135; SQLSTATE: HY000
  Message: Cannot create log files because data files are corrupt or the database was not shut down
  cleanly after creating the data files.
  ER_IB_MSG_1135 was added in 8.0.11.

• Error number: MY-012961; Symbol: ER_IB_MSG_1136; SQLSTATE: HY000
  Message: Only one log file found
  ER_IB_MSG_1136 was added in 8.0.11.

• Error number: MY-012962; Symbol: ER_IB_MSG_1137; SQLSTATE: HY000
  Message: Log file %s size %llu is not a multiple of innodb_page_size
  ER_IB_MSG_1137 was added in 8.0.11.

• Error number: MY-012963; Symbol: ER_IB_MSG_1138; SQLSTATE: HY000
  Message: Log file %s is of different size %llu bytes than other log files %llu bytes!
  ER_IB_MSG_1138 was added in 8.0.11.

• Error number: MY-012964; Symbol: ER_IB_MSG_1139; SQLSTATE: HY000
  Message: Use --innodb-directories to find the tablespace files. If that fails then use --innodb-force-
  recovery=1 to ignore this and to permanently lose all changes to the missing tablespace(s)
Server Error Message Reference

ER_IB_MSG_1139 was added in 8.0.11.

• Error number: MY-012965; Symbol: ER_IB_MSG_1140; SQLSTATE: HY000
  
  Message: The log file may have been corrupt and it is possible that the log scan or parsing did not proceed far enough in recovery. Please run CHECK TABLE on your InnoDB tables to check that they are ok! It may be safest to recover your InnoDB database from a backup!

ER_IB_MSG_1140 was added in 8.0.11.

• Error number: MY-012966; Symbol: ER_IB_MSG_1141; SQLSTATE: HY000
  
  Message: Cannot resize log files in read-only mode.

ER_IB_MSG_1141 was added in 8.0.11.

• Error number: MY-012967; Symbol: ER_IB_MSG_1142; SQLSTATE: HY000
  
  Message: Cannot open DD tablespace.

ER_IB_MSG_1142 was added in 8.0.11.

• Error number: MY-012968; Symbol: ER_IB_MSG_1143; SQLSTATE: HY000
  
  Message: Starting to delete and rewrite log files.

ER_IB_MSG_1143 was added in 8.0.11.

• Error number: MY-012969; Symbol: ER_IB_MSG_1144; SQLSTATE: HY000
  
  Message: Undo from 5.7 found. It will be purged

ER_IB_MSG_1144 was added in 8.0.11.

• Error number: MY-012970; Symbol: ER_IB_MSG_1145; SQLSTATE: HY000

Message: %s

**ER_IB_MSG_1268** was added in 8.0.11.

- **Error number:** MY-013094; Symbol: ER_IB_MSG_1269; SQLSTATE: HY000

Message: %s

**ER_IB_MSG_1269** was added in 8.0.11.

- **Error number:** MY-013095; Symbol: ER_IB_MSG_1270; SQLSTATE: HY000

Message: %s

**ER_IB_MSG_1270** was added in 8.0.11.

- **Error number:** MY-013096; Symbol: ER_RPL_SLAVE_SQL_THREAD_STOP_CMD_EXEC_TIMEOUT; SQLSTATE: HY000

Message: STOP SLAVE command execution is incomplete: Slave SQL thread got the stop signal, thread is busy, SQL thread will stop once the current task is complete.

**ER_RPL_SLAVE_SQL_THREAD_STOP_CMD_EXEC_TIMEOUT** was added in 8.0.11.

- **Error number:** MY-013097; Symbol: ER_RPL_SLAVE_IO_THREAD_STOP_CMD_EXEC_TIMEOUT; SQLSTATE: HY000

Message: STOP SLAVE command execution is incomplete: Slave IO thread got the stop signal, thread is busy, IO thread will stop once the current task is complete.

**ER_RPL_SLAVE_IO_THREAD_STOP_CMD_EXEC_TIMEOUT** was added in 8.0.11.

- **Error number:** MY-013098; Symbol: ER_RPL_GTID_UNSAFE_STMT_ON_NON_TRANS_TABLE; SQLSTATE: HY000

Message: Statement violates GTID consistency: Updates to non-transactional tables can only be done in either autocommitted statements or single-statement transactions, and never in the same statement as updates to transactional tables.

**ER_RPL_GTID_UNSAFE_STMT_ON_NON_TRANS_TABLE** was added in 8.0.11.

- **Error number:** MY-013099; Symbol: ER_RPL_GTID_UNSAFE_STMT_CREATE_SELECT; SQLSTATE: HY000

Message: Statement violates GTID consistency: CREATE TABLE ... SELECT.

**ER_RPL_GTID_UNSAFE_STMT_CREATE_SELECT** was added in 8.0.11.

- **Error number:** MY-013100; Symbol: ER_RPL_GTID_UNSAFE_STMT_ON_TEMPORARY_TABLE; SQLSTATE: HY000

Message: Statement violates GTID consistency: CREATE TEMPORARY TABLE and DROP TEMPORARY TABLE can only be executed outside transactional context. These statements are also not allowed in a function or trigger because functions and triggers are also considered to be multi-statement transactions.

**ER_RPL_GTID_UNSAFE_STMT_ON_TEMPORARY_TABLE** was added in 8.0.11, removed after 8.0.12.
• Error number: MY-013101; Symbol: ER_BINLOG_ROW_VALUE_OPTION_IGNORED; SQLSTATE: HY000

Message: When %s, the option binlog_row_value_options=%s will be ignored and updates will be written in full format to binary log.

ER_BINLOG_ROW_VALUE_OPTION_IGNORED was added in 8.0.11.

• Error number: MY-013102; Symbol: ER_BINLOG_USE_V1_ROW_EVENTS_IGNORED; SQLSTATE: HY000

Message: When %s, the option log_bin_use_v1_row_events=1 will be ignored and row events will be written in new format to binary log.

ER_BINLOG_USE_V1_ROW_EVENTS_IGNORED was added in 8.0.11.

• Error number: MY-013103; Symbol: ER_BINLOG_ROW_VALUE_OPTION_USED_ONLY_FOR_AFTER IMAGES; SQLSTATE: HY000

Message: When %s, the option binlog_row_value_options=%s will be used only for the after-image. Full values will be written in the before-image, so the saving in disk space due to binlog_row_value_options is limited to less than 50%%.

ER_BINLOG_ROW_VALUE_OPTION_USED_ONLY_FOR_AFTER_IMAGES was added in 8.0.11.

• Error number: MY-013104; Symbol: ER_CONNECTION_ABORTED; SQLSTATE: HY000

Message: Aborted connection %u to db: '%s' user: '%s' host: '%s' (%s).

ER_CONNECTION_ABORTED was added in 8.0.11.

• Error number: MY-013105; Symbol: ER_NORMAL_SERVER_SHUTDOWN; SQLSTATE: HY000

Message: %s: Normal shutdown.

ER_NORMAL_SERVER_SHUTDOWN was added in 8.0.11.

• Error number: MY-013106; Symbol: ER_KEYRING_MIGRATE_FAILED; SQLSTATE: HY000

Message: Can not perform keyring migration : %s.

ER_KEYRING_MIGRATE_FAILED was added in 8.0.11.

• Error number: MY-013107; Symbol: ER_GRP_RPL_LOWER_CASE_TABLE_NAMES_DIFF_FROM_GRP; SQLSTATE: HY000

Message: The member is configured with a lower_case_table_names option value '%u' different from the group '%u'. The member will now exit the group. If there is existing data on member, it may be incompatible with group if it was created with a lower_case_table_names value different from the group.

ER_GRP_RPL_LOWER_CASE_TABLE_NAMES_DIFF_FROM_GRP was added in 8.0.11.

• Error number: MY-013108; Symbol: ER_OOM_SAVE_GTIDS; SQLSTATE: HY000

Message: An out-of-memory error occurred while saving the set of GTIDs from the last binary log into the mysql.gtid_executed table.

ER_OOM_SAVE_GTIDS was added in 8.0.11.
• Error number: **MY-013109**; Symbol: **ER_LCTN_NOT_FOUND**; SQLSTATE: **HY000**

  Message: The lower_case_table_names setting for the data dictionary was not found. Starting the server using lower_case_table_names = '%u'.

  **ER_LCTN_NOT_FOUND** was added in 8.0.11.

• Error number: **MY-013111**; Symbol: **ER_COMPONENT_FILTER_WRONG_VALUE**; SQLSTATE: **HY000**

  Message: Variable '%s' can't be set to the value of '%s'

  **ER_COMPONENT_FILTER_WRONG_VALUE** was added in 8.0.11.

• Error number: **MY-013112**; Symbol: **ER_XPLUGIN_FAILED_TO_STOP_SERVICES**; SQLSTATE: **HY000**

  Message: Stopping services failed with error "%s"

  **ER_XPLUGIN_FAILED_TO_STOP_SERVICES** was added in 8.0.11.

• Error number: **MY-013113**; Symbol: **ER_INCONSISTENT_ERROR**; SQLSTATE: **HY000**

  Message: Query caused different errors on master and slave. Error on master: message (format)='%s' error code=%d; Error on slave:actual message='%s', error code=%d. Default database:'%s'. Query:'%s'

• Error number: **MY-013114**; Symbol: **ER_SERVER_MASTER_FATAL_ERROR_READING_BINLOG**; SQLSTATE: **HY000**

  Message: Got fatal error %d from master when reading data from binary log: '%s'

  **ER_SERVER_MASTER_FATAL_ERROR_READING_BINLOG** was added in 8.0.11.

• Error number: **MY-013115**; Symbol: **ER_NETWORK_READ_EVENT_CHECKSUM_FAILURE**; SQLSTATE: **HY000**

  Message: Replication event checksum verification failed while reading from network.

• Error number: **MY-013116**; Symbol: **ER_SLAVE_CREATE_EVENT_FAILURE**; SQLSTATE: **HY000**

  Message: Failed to create %s

• Error number: **MY-013117**; Symbol: **ER_SLAVE_FATAL_ERROR**; SQLSTATE: **HY000**

  Message: Fatal error: %s

• Error number: **MY-013118**; Symbol: **ER_SLAVE_HEARTBEAT_FAILURE**; SQLSTATE: **HY000**

  Message: Unexpected master's heartbeat data: %s

• Error number: **MY-013119**; Symbol: **ER_SLAVE_INCIDENT**; SQLSTATE: **HY000**

  Message: The incident %s occurred on the master. Message: %s

• Error number: **MY-013120**; Symbol: **ER_SLAVE_MASTER_COM_FAILURE**; SQLSTATE: **HY000**

  Message: Master command %s failed: %s

• Error number: **MY-013121**; Symbol: **ER_SLAVE_RELAY_LOG_READ_FAILURE**; SQLSTATE: **HY000**

  Message: Relay log read failure: %s
• Error number: MY-013122; Symbol: ER_SLAVE_RELAY_LOG_WRITE_FAILURE; SQLSTATE: HY000
  Message: Relay log write failure: %s

• Error number: MY-013123; Symbol: ER_SERVER_SLAVE_MI_INIT_REPOSITORY; SQLSTATE: HY000
  Message: Slave failed to initialize master info structure from the repository
  ER_SERVER_SLAVE_MI_INIT_REPOSITORY was added in 8.0.11.

• Error number: MY-013124; Symbol: ER_SERVER_SLAVE_RLI_INIT_REPOSITORY; SQLSTATE: HY000
  Message: Slave failed to initialize relay log info structure from the repository
  ER_SERVER_SLAVE_RLI_INIT_REPOSITORY was added in 8.0.11.

• Error number: MY-013125; Symbol: ER_SERVER_NET_PACKET_TOO_LARGE; SQLSTATE: HY000
  Message: Got a packet bigger than 'max_allowed_packet' bytes
  ER_SERVER_NET_PACKET_TOO_LARGE was added in 8.0.11.

• Error number: MY-013126; Symbol: ER_SERVER_NO_SYSTEM_TABLE_ACCESS; SQLSTATE: HY000
  Message: Access to %s '%s.%s' is rejected.
  ER_SERVER_NO_SYSTEM_TABLE_ACCESS was added in 8.0.11.

• Error number: MY-013127; Symbol: ER_SERVER_UNKNOWN_ERROR; SQLSTATE: HY000
  Message: Unknown error
  ER_SERVER_UNKNOWN_ERROR was added in 8.0.11.

• Error number: MY-013128; Symbol: ER_SERVER_UNKNOWN_SYSTEM_VARIABLE; SQLSTATE: HY000
  Message: Unknown system variable '%s'
  ER_SERVER_UNKNOWN_SYSTEM_VARIABLE was added in 8.0.11.

• Error number: MY-013129; Symbol: ER_SERVER_NO_SESSION_TO_SEND_TO; SQLSTATE: HY000
  Message: A message intended for a client cannot be sent there as no client-session is attached.
  Therefore, we're sending the information to the error-log instead: MY-%06d - %s
  ER_SERVER_NO_SESSION_TO_SEND_TO was added in 8.0.11.

• Error number: MY-013130; Symbol: ER_SERVER_NEW_ABORTING_CONNECTION; SQLSTATE: 08S01
  Message: Aborted connection %u to db: '%s' user: '%s' host: '%s' (%s; diagnostics area: MY-%06d - %s)
  ER_SERVER_NEW_ABORTING_CONNECTION was added in 8.0.11.

• Error number: MY-013131; Symbol: ER_SERVER_OUT_OF_SORTMEMORY; SQLSTATE: HY000
  Message: Out of sort memory, consider increasing server sort buffer size!
**Server Error Message Reference**

- **ER_SERVER_OUT_OF_SORTMEMORY** was added in 8.0.11.
  - Error number: MY-013132; Symbol: ER_SERVER_RECORD_FILE_FULL; SQLSTATE: HY000
    - Message: The table '%s' is full!

- **ER_SERVER_RECORD_FILE_FULL** was added in 8.0.11.
  - Error number: MY-013133; Symbol: ER_SERVER_DISK_FULL_NOWAIT; SQLSTATE: HY000
    - Message: Create table/tablespace '%s' failed, as disk is full.

- **ER_SERVER_DISK_FULL_NOWAIT** was added in 8.0.11.
  - Error number: MY-013134; Symbol: ER_SERVER_HANDLER_ERROR; SQLSTATE: HY000
    - Message: Handler reported error %d - %s

- **ER_SERVER_HANDLER_ERROR** was added in 8.0.11.
  - Error number: MY-013135; Symbol: ER_SERVER_NOT_FORM_FILE; SQLSTATE: HY000
    - Message: Incorrect information in file: '%s'

- **ER_SERVER_NOT_FORM_FILE** was added in 8.0.11.
  - Error number: MY-013136; Symbol: ER_SERVER_CANT_OPEN_FILE; SQLSTATE: HY000
    - Message: Can't open file: '%s' (OS errno: %d - %s)

- **ER_SERVER_CANT_OPEN_FILE** was added in 8.0.11.
  - Error number: MY-013137; Symbol: ER_SERVER_FILE_NOT_FOUND; SQLSTATE: HY000
    - Message: Can't find file: '%s' (OS errno: %d - %s)

- **ER_SERVER_FILE_NOT_FOUND** was added in 8.0.11.
  - Error number: MY-013138; Symbol: ER_SERVER_FILE_USED; SQLSTATE: HY000
    - Message: '%s' is locked against change (OS errno: %d - %s)

- **ER_SERVER_FILE_USED** was added in 8.0.11.
  - Error number: MY-013139; Symbol: ER_SERVER_CANNOT_LOAD_FROM_TABLE_V2; SQLSTATE: HY000
    - Message: Cannot load from %s.%s. The table is probably corrupted!

- **ER_SERVER_CANNOT_LOAD_FROM_TABLE_V2** was added in 8.0.11.
  - Error number: MY-013140; Symbol: ER_ERROR_INFO_FROM_DA; SQLSTATE: HY000
    - Message: Error in diagnostics area: MY-%06d - %s

- **ER_ERROR_INFO_FROM_DA** was added in 8.0.11.
  - Error number: MY-013141; Symbol: ER_SERVER_TABLE_CHECK_FAILED; SQLSTATE: HY000
    - Message: Incorrect definition of table %s.%s: expected column '%s' at position %d, found '%s'.

- **ER_SERVER_TABLE_CHECK_FAILED** was added in 8.0.11.
Server Error Message Reference

- **Error number:** MY-013142; Symbol: ER_SERVER_COL_COUNT_DOESNT_MATCH_PLEASE_UPDATE_V2; SQLSTATE: HY000
  
  **Message:** The column count of %s.%s is wrong. Expected %d, found %d. Created with MySQL %d, now running %d. Please perform the MySQL upgrade procedure.

  ER_SERVER_COL_COUNT_DOESNT_MATCH_PLEASE_UPDATE_V2 was added in 8.0.11.

- **Error number:** MY-013143; Symbol: ER_SERVER_COL_COUNT_DOESNT_MATCH_CORRUPTED_V2; SQLSTATE: HY000
  
  **Message:** Column count of %s.%s is wrong. Expected %d, found %d. The table is probably corrupted

  ER_SERVER_COL_COUNT_DOESNT_MATCH_CORRUPTED_V2 was added in 8.0.11.

Server Error Message Reference

- **Error number:** MY-013161; Symbol: ER_AUDIT_LOG_ENCRYPTION_PASSWORD_HAS_NOT_BEEN_SET; SQLSTATE: HY000
  
  Message: Audit log encryption password has not been set; it will be generated automatically. Use audit_log_encryption_password_get to obtain the password or audit_log_encryption_password_set to set a new one.

  ER_AUDIT_LOG_ENCRYPTION_PASSWORD_HAS_NOT_BEEN_SET was added in 8.0.11.

- **Error number:** MY-013162; Symbol: ER_AUDIT_LOG_COULD_NOT_CREATE_AES_KEY; SQLSTATE: HY000
  
  Message: Could not create AES key. OpenSSL's EVP_BytesToKey function failed.

  ER_AUDIT_LOG_COULD_NOT_CREATE_AES_KEY was added in 8.0.11.

- **Error number:** MY-013163; Symbol: ER_AUDIT_LOG_ENCRYPTION_PASSWORD_CANNOT_BE_FETCHED; SQLSTATE: HY000
  
  Message: Audit log encryption password cannot be fetched from the keyring. Password used so far is used for encryption.

  ER_AUDIT_LOG_ENCRYPTION_PASSWORD_CANNOT_BE_FETCHED was added in 8.0.11.

- **Error number:** MY-013164; Symbol: ER_COULD_NOT_REINITIALIZE_AUDIT_LOG_FILTERS; SQLSTATE: HY000
  
  Message: Could not reinitialize audit log filters.

  ER_COULD_NOT_REINITIALIZE_AUDIT_LOG_FILTERS was added in 8.0.11.

- **Error number:** MY-013165; Symbol: ER_AUDIT_LOG_JSON_USER_NAME_CANNOT_BE_EMPTY; SQLSTATE: HY000
  
  Message: User cannot be empty.

  ER_AUDIT_LOG_JSON_USER_NAME_CANNOT_BE_EMPTY was added in 8.0.11.

- **Error number:** MY-013166; Symbol: ER_AUDIT_LOG_USER_FIRST_CHARACTER_MUST_BE_ALPHANUMERIC; SQLSTATE: HY000
  
  Message: First character of the user name must be alphanumeric.

  ER_AUDIT_LOG_USER_FIRST_CHARACTER_MUST_BE_ALPHANUMERIC was added in 8.0.11.

- **Error number:** MY-013167; Symbol: ER_AUDIT_LOG_JSON_FILTER_DOES_NOT_EXIST; SQLSTATE: HY000
  
  Message: Specified filter has not been found.

  ER_AUDIT_LOG_JSON_FILTER_DOES_NOT_EXIST was added in 8.0.11.

- **Error number:** MY-013168; Symbol: ER_IB_MSG_1271; SQLSTATE: HY000
  
  Message: Cannot upgrade server earlier than 5.7 to 8.0

  ER_IB_MSG_1271 was added in 8.0.11.

- **Error number:** MY-013169; Symbol: ER_STARTING_INIT; SQLSTATE: HY000
  
  Message: %s (mysqld %s) initializing of server in progress as process %lu

  ER_STARTING_INIT was added in 8.0.11.
- **Error number:** MY-013170; **Symbol:** ER_ENDING_INIT; **SQLSTATE:** HY000
  Message: %s (mysqld %s) initializing of server has completed
  ER_ENDING_INIT was added in 8.0.11.

- **Error number:** MY-013171; **Symbol:** ER_IB_MSG_1272; **SQLSTATE:** HY000
  Message: Cannot boot server version %lu on data directory built by version %llu. Downgrade is not supported
  ER_IB_MSG_1272 was added in 8.0.11.

- **Error number:** MY-013172; **Symbol:** ER_SERVER_SHUTDOWN_INFO; **SQLSTATE:** HY000
  Message: Received SHUTDOWN from user %s. Shutting down mysqld (Version: %s).
  ER_SERVER_SHUTDOWN_INFO was added in 8.0.12.

- **Error number:** MY-013173; **Symbol:** ER_GRP_RPL_PLUGIN_ABORT; **SQLSTATE:** HY000
  Message: The plugin encountered a critical error and will abort: %s
  ER_GRP_RPL_PLUGIN_ABORT was added in 8.0.12.

- **Error number:** MY-013177; **Symbol:** ER_AUDIT_LOG_TABLE_DEFINITION_NOT_UPDATED; **SQLSTATE:** HY000
  Message: '%s.%s' table definition has not been upgraded; Please perform the MySQL upgrade procedure.
  ER_AUDIT_LOG_TABLE_DEFINITION_NOT_UPDATED was added in 8.0.12.

- **Error number:** MY-013178; **Symbol:** ER_DD_INITIALIZE_SQL_ERROR; **SQLSTATE:** HY000
  Message: Execution of server-side SQL statement '%s' failed with error code = %d, error message = '%s'.
  ER_DD_INITIALIZE_SQL_ERROR was added in 8.0.12.

- **Error number:** MY-013179; **Symbol:** ER_NO_PATH_FOR_SHARED_LIBRARY; **SQLSTATE:** HY000
  Message: No paths allowed for shared library.
  ER_NO_PATH_FOR_SHARED_LIBRARY was added in 8.0.13.

- **Error number:** MY-013180; **Symbol:** ER_UDF_ALREADY_EXISTS; **SQLSTATE:** HY000
  Message: Function '%s' already exists.
  ER_UDF_ALREADY_EXISTS was added in 8.0.13.

- **Error number:** MY-013181; **Symbol:** ER_SET_EVENT_FAILED; **SQLSTATE:** HY000
  Message: Got Error: %ld from SetEvent.
  ER_SET_EVENT_FAILED was added in 8.0.13.

- **Error number:** MY-013182; **Symbol:** ER_FAILED_TO_ALLOCATE_SSL_BIO; **SQLSTATE:** HY000
  Message: Error allocating SSL BIO.
  ER_FAILED_TO_ALLOCATE_SSL_BIO was added in 8.0.13.
• Error number: MY-013183; Symbol: ER_IB_MSG_1273; SQLSTATE: HY000
Message: %s
ER_IB_MSG_1273 was added in 8.0.13.

• Error number: MY-013184; Symbol: ER_PID_FILEPATH_LOCATIONS_INACCESSIBLE; SQLSTATE: HY000
Message: One or several locations were inaccessible while checking PID filepath.
ER_PID_FILEPATH_LOCATIONS_INACCESSIBLE was added in 8.0.13.

• Error number: MY-013185; Symbol: ER_UNKNOWN_VARIABLE_IN_PERSISTED_CONFIG_FILE; SQLSTATE: HY000
Message: Currently unknown variable '%s' was read from the persisted config file.
ER_UNKNOWN_VARIABLE_IN_PERSISTED_CONFIG_FILE was added in 8.0.13.

• Error number: MY-013186; Symbol: ER_FAILED_TO_HANDLE_DEFAULTS_FILE; SQLSTATE: HY000
Message: Fatal error in defaults handling. Program aborted!
ER_FAILED_TO_HANDLE_DEFAULTS_FILE was added in 8.0.13.

• Error number: MY-013187; Symbol: ER_DUPLICATE_SYS_VAR; SQLSTATE: HY000
Message: Duplicate variable name '%s'.
ER_DUPLICATE_SYS_VAR was added in 8.0.13.

• Error number: MY-013188; Symbol: ER_FAILED_TO_INIT_SYS_VAR; SQLSTATE: HY000
Message: Failed to initialize system variables.
ER_FAILED_TO_INIT_SYS_VAR was added in 8.0.13.

• Error number: MY-013189; Symbol: ER_SYS_VAR_NOT_FOUND; SQLSTATE: HY000
Message: Variable name '%s' not found.
ER_SYS_VAR_NOT_FOUND was added in 8.0.13.

• Error number: MY-013190; Symbol: ER_IB_MSG_1274; SQLSTATE: HY000
Message: Some (%d) threads are still active
ER_IB_MSG_1274 was added in 8.0.13.

• Error number: MY-013191; Symbol: ER_IB_MSG_1275; SQLSTATE: HY000
Message: %s
ER_IB_MSG_1275 was added in 8.0.13.

• Error number: MY-013192; Symbol: ER_TARGET_TS_UNENCRYPTED; SQLSTATE: HY000
Message: Source tablespace is encrypted but target tablespace is not.
ER_TARGET_TS_UNENCRYPTED was added in 8.0.13, removed after 8.0.15.

• Error number: MY-013193; Symbol: ER_IB_MSG_1276; SQLSTATE: HY000
Message: %s

ER_IB_MSG_1276 was added in 8.0.13, removed after 8.0.13.

- Error number: MY-013193; Symbol: ER_IB_MSG_WAIT_FOR_ENCRYPT_THREAD; SQLSTATE: HY000
  Message: Waiting for tablespace_alter_encrypt_thread to exit

ER_IB_MSG_WAIT_FOR_ENCRYPT_THREAD was added in 8.0.14.

- Error number: MY-013194; Symbol: ER_IB_MSG_1277; SQLSTATE: HY000
  Message: %s

ER_IB_MSG_1277 was added in 8.0.13.

- Error number: MY-013195; Symbol: ER_IB_MSG_1278; SQLSTATE: HY000
  Message: %s

ER_IB_MSG_1278 was added in 8.0.13, removed after 8.0.13.

- Error number: MY-013195; Symbol: ER_IB_MSG_NO_ENCRYPT_PROGRESS_FOUND; SQLSTATE: HY000
  Message: %s

ER_IB_MSG_NO_ENCRYPT_PROGRESS_FOUND was added in 8.0.14.

- Error number: MY-013196; Symbol: ER_IB_MSG_RESUME_OP_FOR_SPACE; SQLSTATE: HY000
  Message: %s

ER_IB_MSG_RESUME_OP_FOR_SPACE was added in 8.0.14.

- Error number: MY-013197; Symbol: ER_IB_MSG_1280; SQLSTATE: HY000
  Message: %s

ER_IB_MSG_1280 was added in 8.0.13.

- Error number: MY-013198; Symbol: ER_IB_MSG_1281; SQLSTATE: HY000
  Message: %s

ER_IB_MSG_1281 was added in 8.0.13.

- Error number: MY-013199; Symbol: ER_IB_MSG_1282; SQLSTATE: HY000
  Message: %s

ER_IB_MSG_1282 was added in 8.0.13.

- Error number: MY-013200; Symbol: ER_IB_MSG_1283; SQLSTATE: HY000
  Message: %s
**ER_IB_MSG_1283** was added in 8.0.13.

- Error number: **MY-013201**; Symbol: **ER_IB_MSG_1284**; SQLSTATE: **HY000**
  
  Message: `%s`

**ER_IB_MSG_1284** was added in 8.0.13.

- Error number: **MY-013202**; Symbol: **ER_CANT_SET_ERROR_SUPPRESSION_LIST_FROM_COMMAND_LINE**; SQLSTATE: **HY000**
  
  Message: `%s`: Could not add suppression rule for code "%s". Rule-set may be full, or code may not correspond to an error-log message.

**ER_CANT_SET_ERROR_SUPPRESSION_LIST_FROM_COMMAND_LINE** was added in 8.0.13.

- Error number: **MY-013203**; Symbol: **ER_INVALID_VALUE_OF_BIND_ADDRESSES**; SQLSTATE: **HY000**
  
  Message: Invalid value for command line option bind-addresses: '%%s'

**ER_INVALID_VALUE_OF_BIND_ADDRESSES** was added in 8.0.13.

- Error number: **MY-013204**; Symbol: **ER_RELAY_LOG_SPACE_LIMIT_DISABLED**; SQLSTATE: **HY000**
  
  Message: Ignoring the @@global.relay_log_space_limit option because @@global.relay_log_purge is disabled.

**ER_RELAY_LOG_SPACE_LIMIT_DISABLED** was added in 8.0.13.

- Error number: **MY-013205**; Symbol: **ER_GRP_RPL_ERROR_GTID_SET_EXTRACTION**; SQLSTATE: **HY000**
  
  Message: Error when extracting GTID execution information: `%s`

**ER_GRP_RPL_ERROR_GTID_SET_EXTRACTION** was added in 8.0.13.

- Error number: **MY-013206**; Symbol: **ER_GRP_RPL MISSING_GRP_RPL_ACTION_COORDINATOR**; SQLSTATE: **HY000**
  
  Message: Message received without a proper group coordinator module.

**ER_GRP_RPL MISSING_GRP_RPL_ACTION_COORDINATOR** was added in 8.0.13.

- Error number: **MY-013207**; Symbol: **ER_GRP_RPL JOIN WHEN GROUP ACTION RUNNING**; SQLSTATE: **HY000**
  
  Message: A member cannot join the group while a group configuration operation is running.

**ER_GRP_RPL JOIN WHEN GROUP ACTION RUNNING** was added in 8.0.13.

- Error number: **MY-013208**; Symbol: **ER_GRP_RPL JOINER EXIT WHEN GROUP ACTION RUNNING**; SQLSTATE: **HY000**
  
  Message: A member is joining the group while a group configuration operation is occurring. The member will now leave the group

**ER_GRP_RPL JOINER EXIT WHEN GROUP ACTION RUNNING** was added in 8.0.13.

- Error number: **MY-013209**; Symbol: **ER_GRP_RPL CHANNEL THREAD WHEN GROUP ACTION RUNNING**; SQLSTATE: **HY000**
  
  Message: A member is joining the group while a group configuration operation is occurring. The member will now leave the group

**ER_GRP_RPL CHANNEL THREAD WHEN GROUP ACTION RUNNING** was added in 8.0.13.
Message: Can't start slave %s when group replication is running a group configuration operation.

`ER_GRP_RPL_CHANNEL_THREAD_WHEN_GROUP_ACTION_RUNNING` was added in 8.0.13.

- Error number: `MY-013210`; Symbol: `ER_GRP_RPL_APPointed_PRIMARY_NOT_PRESENT`; SQLSTATE: `HY000`

Message: A primary election was invoked but the requested primary member is not in the group. Request ignored.

`ER_GRP_RPL_APPointed_PRIMARY_NOT_PRESENT` was added in 8.0.13.

- Error number: `MY-013211`; Symbol: `ER_GRP_RPL_ERROR_ON_MESSAGE_SENDING`; SQLSTATE: `HY000`

Message: Error while sending message. Context: %s

`ER_GRP_RPL_ERROR_ON_MESSAGE_SENDING` was added in 8.0.13.

- Error number: `MY-013212`; Symbol: `ER_GRP_RPL_CONFIGURATION_ACTION_ERROR`; SQLSTATE: `HY000`

Message: Error while executing a group configuration operation: %s

`ER_GRP_RPL_CONFIGURATION_ACTION_ERROR` was added in 8.0.13.

- Error number: `MY-013213`; Symbol: `ER_GRP_RPL_CONFIGURATION_ACTION_LOCAL_TERMINATION`; SQLSTATE: `HY000`

Message: Configuration operation '%s' terminated. %s

`ER_GRP_RPL_CONFIGURATION_ACTION_LOCAL_TERMINATION` was added in 8.0.13.

- Error number: `MY-013214`; Symbol: `ER_GRP_RPL_CONFIGURATION_ACTION_START`; SQLSTATE: `HY000`

Message: Starting group operation local execution: %s

`ER_GRP_RPL_CONFIGURATION_ACTION_START` was added in 8.0.13.

- Error number: `MY-013215`; Symbol: `ER_GRP_RPL_CONFIGURATION_ACTION_END`; SQLSTATE: `HY000`

Message: Termination of group operation local execution: %s

`ER_GRP_RPL_CONFIGURATION_ACTION_END` was added in 8.0.13.

- Error number: `MY-013216`; Symbol: `ER_GRP_RPL_CONFIGURATION_ACTION_KILLED_ERROR`; SQLSTATE: `HY000`

Message: A configuration change was killed in this member. The member will now leave the group as its configuration may have diverged.

`ER_GRP_RPL_CONFIGURATION_ACTION_KILLED_ERROR` was added in 8.0.13.

- Error number: `MY-013217`; Symbol: `ER_GRP_RPLPRIMARY_ELECTION_PROCESS_ERROR`; SQLSTATE: `HY000`

Message: There was an issue on the primary election process: %s The member will now leave the group.

`ER_GRP_RPLPRIMARY_ELECTION_PROCESS_ERROR` was added in 8.0.13.
• Error number: MY-013218; Symbol: ER_GRP_RPL_PRIMARY_ELECTION_STOP_ERROR; SQLSTATE: HY000
  Message: There was an issue when stopping a previous election process: %s
  ER_GRP_RPL_PRIMARY_ELECTION_STOP_ERROR was added in 8.0.13.

• Error number: MY-013219; Symbol: ER_GRP_RPL_NO_STAGE_SERVICE; SQLSTATE: HY000
  Message: It was not possible to initialize stage logging for this task. The operation will still run without stage tracking.
  ER_GRP_RPL_NO_STAGE_SERVICE was added in 8.0.13.

• Error number: MY-013220; Symbol: ER_GRP_RPL_UDF_REGISTER_ERROR; SQLSTATE: HY000
  Message: Could not execute the installation of Group Replication UDF function: %s. Check if the function is already present, if so, try to remove it
  ER_GRP_RPL_UDF_REGISTER_ERROR was added in 8.0.13.

• Error number: MY-013221; Symbol: ER_GRP_RPL_UDF_UNREGISTER_ERROR; SQLSTATE: HY000
  Message: Could not uninstall Group Replication UDF functions. Try to remove them manually if present.
  ER_GRP_RPL_UDF_UNREGISTER_ERROR was added in 8.0.13.

• Error number: MY-013222; Symbol: ER_GRP_RPL_UDF_REGISTER_SERVICE_ERROR; SQLSTATE: HY000
  Message: Could not execute the installation of Group Replication UDF functions. Check for other errors in the log and try to reinstall the plugin
  ER_GRP_RPL_UDF_REGISTER_SERVICE_ERROR was added in 8.0.13.

• Error number: MY-013223; Symbol: ER_GRP_RPL_SERVER_UDF_ERROR; SQLSTATE: HY000
  Message: The function '%s' failed. %s
  ER_GRP_RPL_SERVER_UDF_ERROR was added in 8.0.17.

• Error number: MY-013227; Symbol: ER_SERVER_WRONG_VALUE_FOR_VAR; SQLSTATE: HY000
  Message: Variable '%s' can't be set to the value of '%s'
  ER_SERVER_WRONG_VALUE_FOR_VAR was added in 8.0.13.

• Error number: MY-013228; Symbol: ER_COULD_NOT_CREATE_WINDOWS_REGISTRY_KEY; SQLSTATE: HY000
  Message: %s was unable to create a new Windows registry key %s for %s; continuing to use the previous ident.
  ER_COULD_NOT_CREATE_WINDOWS_REGISTRY_KEY was added in 8.0.13.

• Error number: MY-013229; Symbol: ER_SERVER_GTID_UNSAFE_CREATE_DROP_TEMP_TABLE_IN_TRX_IN_SBR; SQLSTATE: HY000
  Message: Statement violates GTID consistency: CREATE TEMPORARY TABLE and DROP TEMPORARY TABLE are not allowed inside a transaction or inside a procedure in a transactional context when @@session.binlog_format=STATEMENT.
**Server Error Message Reference**

- **Error number:** `MY-013233`; Symbol: `ER_SERVER_GTID_UNSAFE_CREATE_DROP_TEMP_TABLE_IN_TRX_IN_SBR`; SQLSTATE: `HY000`
  - Message: Unable to switch security context to user: %s

- **Error number:** `MY-013234`; Symbol: `ER_XPLUGIN_FAILED_TO_SWITCH_SECURITY_CTX`; SQLSTATE: `HY000`
  - Message: Statement violates GTID consistency: ALTER TABLE ... ADD COLUMN .. with expression as DEFAULT.

- **Error number:** `MY-013235`; Symbol: `ER_RPL_GTID_UNSAFE_ALTER_ADD_COL_WITH_DEFAULT_EXPRESSION`; SQLSTATE: `HY000`
  - Message: Error in parsing %s '%s'.'%s' during upgrade. %s

- **Error number:** `MY-013236`; Symbol: `ER_DATA_DIRECTORY_UNUSABLE`; SQLSTATE: `HY000`
  - Message: The designated data directory %s is unusable. You can remove all files that the server added to it.

- **Error number:** `MY-013237`; Symbol: `ER_LDAP_AUTH_USER_GROUP_SEARCH_ROOT_BIND`; SQLSTATE: `HY000`
  - Message: Group search rebinding via root DN: %s

- **Error number:** `MY-013238`; Symbol: `ER_PLUGIN_INSTALL_ERROR`; SQLSTATE: `HY000`
  - Message: Error installing plugin %s': %s

- **Error number:** `MY-013239`; Symbol: `ER_PLUGIN_UNINSTALL_ERROR`; SQLSTATE: `HY000`
  - Message: Error uninstalling plugin %s': %s

- **Error number:** `MY-013240`; Symbol: `ER_SHARED_TABLESPACE_USED_BY_PARTITIONED_TABLE`; SQLSTATE: `HY000`
  - Message: Partitioned table '%s' is not allowed to use shared tablespace '%s'. Please move all partitions to file-per-table tablespaces before upgrade.

- **Error number:** `MY-013241`; Symbol: `ER_UNKNOWN_TABLESPACE_TYPE`; SQLSTATE: `HY000`
  - Message: Cannot determine the type of the tablespace named '%s'.
• Error number: MY-013242; Symbol: ER_WARN_DEPRECATED_UTF8_ALIAS_OPTION; SQLSTATE: HY000
Message: %s: 'utf8' is currently an alias for the character set UTF8MB3, but will be an alias for UTF8MB4 in a future release. Please consider using UTF8MB4 in order to be unambiguous.

ER_WARN_DEPRECATED_UTF8_ALIAS_OPTION was added in 8.0.13.

• Error number: MY-013243; Symbol: ER_WARN_DEPRECATED_UTF8MB3_CHARSET_OPTION; SQLSTATE: HY000
Message: %s: The character set UTF8MB3 is deprecated and will be removed in a future release. Please consider using UTF8MB4 instead.

ER_WARN_DEPRECATED_UTF8MB3_CHARSET_OPTION was added in 8.0.13.

• Error number: MY-013244; Symbol: ER_WARN_DEPRECATED_UTF8MB3_COLLATION_OPTION; SQLSTATE: HY000
Message: %s: '%s' is a collation of the deprecated character set UTF8MB3. Please consider using UTF8MB4 with an appropriate collation instead.

ER_WARN_DEPRECATED_UTF8MB3_COLLATION_OPTION was added in 8.0.13.

• Error number: MY-013245; Symbol: ER_SSL_MEMORY_INSTRUMENTATION_INIT_FAILED; SQLSTATE: HY000
Message: The SSL library function %s failed. This is typically caused by the SSL library already being used. As a result the SSL memory allocation will not be instrumented.

ER_SSL_MEMORY_INSTRUMENTATION_INIT_FAILED was added in 8.0.13.

• Error number: MY-013246; Symbol: ER_IB_MSG_MADV_DONTDUMP_UNSUPPORTED; SQLSTATE: HY000
Message: Disabling @@core_file because @@innodb_buffer_pool_in_core_file is disabled, yet MADV_DONTDUMP is not supported on this platform

ER_IB_MSG_MADV_DONTDUMP_UNSUPPORTED was added in 8.0.14.

• Error number: MY-013247; Symbol: ER_IB_MSG_MADVISE_FAILED; SQLSTATE: HY000
Message: Disabling @@core_file because @@innodb_buffer_pool_in_core_file is disabled, yet madvise(%p,%zu,%s) failed with %s

ER_IB_MSG_MADVISE_FAILED was added in 8.0.14.

• Error number: MY-013249; Symbol: ER_WARN_REMOVED_SQL_MODE; SQLSTATE: HY000
Message: sql_mode=0x%08x has been removed and will be ignored

ER_WARN_REMOVED_SQL_MODE was added in 8.0.14.

• Error number: MY-013250; Symbol: ER_IB_MSG_FAILED_TO_ALLOCATE_WAIT; SQLSTATE: HY000
Message: Failed to allocate memory for a pool of size %zu bytes. Will wait for %zu seconds for a thread to free a resource.

ER_IB_MSG_FAILED_TO_ALLOCATE_WAIT was added in 8.0.14.
Server Error Message Reference

- Error number: **MY-013251**; Symbol: **ER_IB_MSG_NUM_POOLS**; SQLSTATE: **HY000**
  
  Message: Number of pools: %zu

  **ER_IB_MSG_NUM_POOLS** was added in 8.0.14.

- Error number: **MY-013252**; Symbol: **ER_IB_MSG_USING_UNDO_SPACE**; SQLSTATE: **HY000**
  
  Message: Using undo tablespace '%s'.

  **ER_IB_MSG_USING_UNDO_SPACE** was added in 8.0.14.

- Error number: **MY-013253**; Symbol: **ER_IB_MSG_FAIL_TO_SAVE_SPACE_STATE**; SQLSTATE: **HY000**
  
  Message: %s Unable to save the current state of tablespace '%s' to the data dictionary

  **ER_IB_MSG_FAIL_TO_SAVE_SPACE_STATE** was added in 8.0.14.

- Error number: **MY-013254**; Symbol: **ER_IB_MSG_MAX_UNDO_SPACES_REACHED**; SQLSTATE: **HY000**
  
  Message: Cannot create undo tablespace '%s' at '%s' because %d undo tablespaces already exist.

  **ER_IB_MSG_MAX_UNDO_SPACES_REACHED** was added in 8.0.14.

- Error number: **MY-013255**; Symbol: **ER_IB_MSG_ERROR_OPENING_NEW_UNDO_SPACE**; SQLSTATE: **HY000**
  
  Message: Error %d opening newly created undo tablespace '%s'.

  **ER_IB_MSG_ERROR_OPENING_NEW_UNDO_SPACE** was added in 8.0.14.

- Error number: **MY-013256**; Symbol: **ER_IB_MSG_FAILED_SDI_Z_BUF_ERROR**; SQLSTATE: **HY000**
  
  Message: SDI Compression failed, Z_BUF_ERROR

  **ER_IB_MSG_FAILED_SDI_Z_BUF_ERROR** was added in 8.0.14.

- Error number: **MY-013257**; Symbol: **ER_IB_MSG_FAILED_SDI_Z_MEM_ERROR**; SQLSTATE: **HY000**
  
  Message: SDI Compression failed, Z_MEM_ERROR

  **ER_IB_MSG_FAILED_SDI_Z_MEM_ERROR** was added in 8.0.14.

- Error number: **MY-013258**; Symbol: **ER_IB_MSG_SDI_Z_STREAM_ERROR**; SQLSTATE: **HY000**
  
  Message: SDI Compression failed, Z_STREAM_ERROR

  **ER_IB_MSG_SDI_Z_STREAM_ERROR** was added in 8.0.14.

- Error number: **MY-013259**; Symbol: **ER_IB_MSG_SDI_Z_UNKNOWN_ERROR**; SQLSTATE: **HY000**
  
  Message: %s

  **ER_IB_MSG_SDI_Z_UNKNOWN_ERROR** was added in 8.0.14.

- Error number: **MY-013260**; Symbol: **ER_IB_MSG_FOUND_WRONG_UNDO_SPACE**; SQLSTATE: **HY000**
  
  Message: Expected to find undo tablespace '%s' for Space ID=%lu, but found '%s' instead! Did you change innodb_undo_directory?
ER_IB_MSG_FOUND_WRONG_UNDO_SPACE was added in 8.0.14.

- Error number: MY-013261; Symbol: ER_IB_MSG_NOT_END_WITH_IBU; SQLSTATE: HY000
  Message: Cannot use %s as an undo tablespace because it does not end with '.ibu'.
  ER_IB_MSG_NOT_END_WITH_IBU was added in 8.0.14.

- Error number: MY-013262; Symbol: ER_IB_MSG_UNDO_TRUNC_EMPTY_FILE; SQLSTATE: HY000
  Message: ib_undo_trunc_empty_file
  ER_IB_MSG_UNDO_TRUNC_EMPTY_FILE was added in 8.0.14.

- Error number: MY-013263; Symbol: ER_IB_MSG_UNDO_TRUNC_BEFORE_DD_UPDATE; SQLSTATE: HY000
  Message: ib_undo_trunc_before_dd_update
  ER_IB_MSG_UNDO_TRUNC_BEFORE_DD_UPDATE was added in 8.0.14.

- Error number: MY-013264; Symbol: ER_IB_MSG_UNDO_TRUNC_BEFORE_UNDO_LOGGING; SQLSTATE: HY000
  Message: ib_undo_trunc_before_done_logging
  ER_IB_MSG_UNDO_TRUNC_BEFORE_UNDO_LOGGING was added in 8.0.14.

- Error number: MY-013265; Symbol: ER_IB_MSG_UNDO_TRUNC_BEFORE_RSEGS; SQLSTATE: HY000
  Message: ib_undo_trunc_before_rsegs
  ER_IB_MSG_UNDO_TRUNC_BEFORE_RSEG was added in 8.0.14.

- Error number: MY-013266; Symbol: ER_IB_MSG_FAILED_TO_FINISH_TRUNCATE; SQLSTATE: HY000
  Message: %s Failed to finish truncating Undo Tablespace '%s'
  ER_IB_MSG_FAILED_TO_FINISH_TRUNCATE was added in 8.0.14.

- Error number: MY-013267; Symbol: ER_IB_MSG_DEPRECATED_INNODB_UNDO_TABLESPACES; SQLSTATE: HY000
  Message: The setting INNODB_UNDO_TABLESPACES is deprecated and is no longer used. InnoDB always creates 2 undo tablespaces to start with. If you need more, please use CREATE UNDO TABLESPACE.
  ER_IB_MSG_DEPRECATED_INNODB_UNDO_TABLESPACES was added in 8.0.14.

  Message: Trimming left spaces
  ER_LDAP_MAPPING_TRIMMING_SPACES was added in 8.0.14.

- Error number: MY-013356; Symbol: ER_LDAP_MAPPING_IS_QUOTE; SQLSTATE: HY000
  Message: Checking if current characters is quote
  ER_LDAP_MAPPING_IS_QUOTE was added in 8.0.14.

- Error number: MY-013357; Symbol: ER_LDAP_MAPPING_NON_DESIRED_STATE; SQLSTATE: HY000
  Message: Not desired state or un-defined states.
  ER_LDAP_MAPPING_NON_DESIRED_STATE was added in 8.0.14.

- Error number: MY-013358; Symbol: ER_INVALID_NAMED_PIPE_FULL_ACCESS_GROUP; SQLSTATE: HY000
  Message: Invalid value for named_pipe_full_access_group.
  ER_INVALID_NAMED_PIPE_FULL_ACCESS_GROUP was added in 8.0.14.
• Error number: **MY-013359**; Symbol: **ER_PREPARE_FOR_SECONDARY_ENGINE**; SQLSTATE: **HY000**

Message: Retry the statement using a secondary storage engine.

**ER_PREPARE_FOR_SECONDARY_ENGINE** was added in 8.0.16.

• Error number: **MY-013360**; Symbol: **ER_SERVER_WARN_DEPRECATED**; SQLSTATE: **HY000**

Message: '%s' is deprecated and will be removed in a future release. Please use %s instead

**ER_SERVER_WARN_DEPRECATED** was added in 8.0.16.

• Error number: **MY-013361**; Symbol: **ER_AUTH_ID_WITH_SYSTEM_USER_PRIV_IN_MANDATORY_ROLES**; SQLSTATE: **HY000**

Message: Cannot set mandatory_roles: AuthId `%s`@`%s` has '%s' privilege.

**ER_AUTH_ID_WITH_SYSTEM_USER_PRIV_IN_MANDATORY_ROLES** was added in 8.0.16.

• Error number: **MY-013362**; Symbol: **ER_SERVER_BINLOG_MASTER_KEY_RECOVERY_OUT_OF_COMBINATION**; SQLSTATE: **HY000**

Message: Unable to recover binary log master key, the combination of new_master_key_seqno=%u, master_key_seqno=%u and old_master_key_seqno=%u are wrong.

**ER_SERVER_BINLOG_MASTER_KEY_RECOVERY_OUT_OF_COMBINATION** was added in 8.0.16.

• Error number: **MY-013363**; Symbol: **ER_SERVER_BINLOG_MASTER_KEY_ROTATION_FAIL_TO_CLEANUP_AUX_KEY**; SQLSTATE: **HY000**

Message: Failed to remove auxiliary binary log encryption key from keyring, please check if keyring plugin is loaded. The cleanup of the binary log master key rotation process did not finish as expected and the cleanup will take place upon server restart or next 'ALTER INSTANCE ROTATE BINLOG MASTER KEY' execution.

**ER_SERVER_BINLOG_MASTER_KEY_ROTATION_FAIL_TO_CLEANUP_AUX_KEY** was added in 8.0.16.

• Error number: **MY-013368**; Symbol: **ER_TURNING_ON_PARTIAL_REVOKES**; SQLSTATE: **HY000**

Message: At least one partial revoke exists on a database. Turning ON the system variable '@@partial_revokes'.

**ER_TURNING_ON_PARTIAL_REVOKES** was added in 8.0.16.

• Error number: **MY-013369**; Symbol: **ER_WARN_PARTIAL_REVOKE_AND_DB_GRANT**; SQLSTATE: **HY000**

Message: For user '%s'@'%s', one or more privileges granted through mysql.db for database '%s', conflict with partial revoke. It could mean 'mysql' schema is corrupted.

**ER_WARN_PARTIAL_REVOKE_AND_DB_GRANT** was added in 8.0.16.

• Error number: **MY-013370**; Symbol: **ER_WARN_INCORRECT_PRIVILEGE_FOR_DB_RESTRICTIONS**; SQLSTATE: **HY000**

Message: For user %s, ignored restrictions for privilege(s) '%s' for database '%s' as these are not valid database privileges.

**ER_WARN_INCORRECT_PRIVILEGE_FOR_DB_RESTRICTIONS** was added in 8.0.16.
• Error number: MY-013371; Symbol: ER_WARN_INVALID_DB_RESTRICTIONS; SQLSTATE: HY000
Message: For user '%s', ignored restrictions for privilege(s) '%s' for database '%s' as corresponding global privilege(s) are not granted.
ER_WARN_INVALID_DB_RESTRICTIONS was added in 8.0.16.

• Error number: MY-013372; Symbol: ER_GRP_RPL_INVALID_COMMUNICATION_PROTOCOL; SQLSTATE: HY000
Message: '%s' is an invalid value for group_replication_communication_protocol_join, please use a MySQL version between 5.7.14 and this server's version
ER_GRP_RPL_INVALID_COMMUNICATION_PROTOCOL was added in 8.0.16.

• Error number: MY-013373; Symbol: ER_GRP_RPL_STARTED_AUTO_REJOIN; SQLSTATE: HY000
Message: Started auto-rejoin procedure attempt %lu of %lu
ER_GRP_RPL_STARTED_AUTO_REJOIN was added in 8.0.16.

• Error number: MY-013374; Symbol: ER_GRP_RPL_TIMEOUT_RECEIVED_VC_ON_REJOIN; SQLSTATE: HY000
Message: Timeout while waiting for a view change event during the auto-rejoin procedure
ER_GRP_RPL_TIMEOUT_RECEIVED_VC_ON_REJOIN was added in 8.0.16.

• Error number: MY-013375; Symbol: ER_GRP_RPL_FINISHED_AUTO_REJOIN; SQLSTATE: HY000
Message: Auto-rejoin procedure attempt %lu of %lu finished. Member was%s able to join the group.
ER_GRP_RPL_FINISHED_AUTO_REJOIN was added in 8.0.16.

• Error number: MY-013376; Symbol: ER_GRP_RPL_DEFAULT_TABLE_ENCRYPTION_DIFF_FROM_GRP; SQLSTATE: HY000
Message: The member is configured with a default_table_encryption option value '%d' different from the group '%d'. The member will now exit the group.
ER_GRP_RPL_DEFAULT_TABLE_ENCRYPTION_DIFF_FROM_GRP was added in 8.0.16.

• Error number: MY-013377; Symbol: ER_SERVER_UPGRADE_OFF; SQLSTATE: HY000
Message: Server shutting down because upgrade is required, yet prohibited by the command line option '--upgrade=NONE'.
ER_SERVER_UPGRADE_OFF was added in 8.0.16.

• Error number: MY-013378; Symbol: ER_SERVER_UPGRADE_SKIP; SQLSTATE: HY000
Message: Server upgrade is required, but skipped by command line option '--upgrade=MINIMAL'.
ER_SERVER_UPGRADE_SKIP was added in 8.0.16.

• Error number: MY-013379; Symbol: ER_SERVER_UPGRADE_PENDING; SQLSTATE: HY000
Message: Server upgrade started with version %d, but server upgrade of version %d is still pending.
ER_SERVER_UPGRADE_PENDING was added in 8.0.16.

• Error number: MY-013380; Symbol: ER_SERVER_UPGRADE_FAILED; SQLSTATE: HY000
Message: Failed to upgrade server.

**ER_SERVER_UPGRADE_FAILED** was added in 8.0.16.

- **Error number:** MY-013381; Symbol: **ER_SERVER_UPGRADE_STATUS**; SQLSTATE: **HY000**
  Message: Server upgrade from '%d' to '%d' %s.
  
  **ER_SERVER_UPGRADE_STATUS** was added in 8.0.16.

- **Error number:** MY-013382; Symbol: **ER_SERVER_UPGRADE_REPAIR_REQUIRED**; SQLSTATE: **HY000**
  Message: Table '%s' requires repair.
  
  **ER_SERVER_UPGRADE_REPAIR_REQUIRED** was added in 8.0.16.

- **Error number:** MY-013383; Symbol: **ER_SERVER_UPGRADE_REPAIR_STATUS**; SQLSTATE: **HY000**
  Message: Table '%s' repair %s.
  
  **ER_SERVER_UPGRADE_REPAIR_STATUS** was added in 8.0.16.

- **Error number:** MY-013384; Symbol: **ER_SERVER_UPGRADE_INFO_FILE**; SQLSTATE: **HY000**
  Message: Could not open server upgrade info file '%s' for writing. Please make sure the file is writable.
  
  **ER_SERVER_UPGRADE_INFO_FILE** was added in 8.0.16.

- **Error number:** MY-013385; Symbol: **ER_SERVER_UPGRADE_SYS_SCHEMA**; SQLSTATE: **HY000**
  Message: Upgrading the sys schema.
  
  **ER_SERVER_UPGRADE_SYS_SCHEMA** was added in 8.0.16.

- **Error number:** MY-013386; Symbol: **ER_SERVER_UPGRADE_MYSQL_TABLES**; SQLSTATE: **HY000**
  Message: Running queries to upgrade MySQL server.
  
  **ER_SERVER_UPGRADE_MYSQL_TABLES** was added in 8.0.16.

- **Error number:** MY-013387; Symbol: **ER_SERVER_UPGRADE_SYSTEM_TABLES**; SQLSTATE: **HY000**
  Message: Upgrading system table data.
  
  **ER_SERVER_UPGRADE_SYSTEM_TABLES** was added in 8.0.16.

- **Error number:** MY-013388; Symbol: **ER_SERVER_UPGRADE_EMPTY_SYS**; SQLSTATE: **HY000**
  Message: Found empty sys database. Installing the sys schema.
  
  **ER_SERVER_UPGRADE_EMPTY_SYS** was added in 8.0.16.

- **Error number:** MY-013389; Symbol: **ER_SERVER_UPGRADE_NO_SYS_VERSION**; SQLSTATE: **HY000**
  Message: A sys schema exists with no sys.version view. If you have a user created sys schema, this must be renamed for the upgrade to succeed.
  
  **ER_SERVER_UPGRADE_NO_SYS_VERSION** was added in 8.0.16.
Server Error Message Reference

- **Error number:** MY-013390; **Symbol:** ER_SERVER_UPGRADE_SYS_VERSION_EMPTY; **SQLSTATE:** HY000

  Message: A sys schema exists with a sys.version view, but it returns no results.

  ER_SERVER_UPGRADE_SYS_VERSION_EMPTY was added in 8.0.16.

- **Error number:** MY-013391; **Symbol:** ER_SERVER_UPGRADE_SYS_SCHEMA_OUTDATED; **SQLSTATE:** HY000

  Message: Found outdated sys schema version %.

  ER_SERVER_UPGRADE_SYS_SCHEMA_OUTDATED was added in 8.0.16.

- **Error number:** MY-013392; **Symbol:** ER_SERVER_UPGRADE_SYS_SCHEMA_UP_TO_DATE; **SQLSTATE:** HY000

  Message: The sys schema is already up to date (version %).

  ER_SERVER_UPGRADE_SYS_SCHEMA_UP_TO_DATE was added in 8.0.16.

- **Error number:** MY-013393; **Symbol:** ER_SERVER_UPGRADE_SYS_SCHEMA_OBJECT_COUNT; **SQLSTATE:** HY000

  Message: Found %d sys %s, but expected %d. Re-installing the sys schema.

  ER_SERVER_UPGRADE_SYS_SCHEMA_OBJECT_COUNT was added in 8.0.16.

- **Error number:** MY-013394; **Symbol:** ER_SERVER_UPGRADE_CHECKING_DB; **SQLSTATE:** HY000

  Message: Checking '%s' schema.

  ER_SERVER_UPGRADE_CHECKING_DB was added in 8.0.16.

- **Error number:** MY-013395; **Symbol:** ER_IB_MSG_DDL_LOG_DELETE_BY_ID_TMCT; **SQLSTATE:** HY000

  Message: Too many concurrent transactions while clearing the DDL Log. Please increase the number of Rollback Segments.

  ER_IB_MSG_DDL_LOG_DELETE_BY_ID_TMCT was added in 8.0.16.

- **Error number:** MY-013396; **Symbol:** ER_IB_MSG_POST_RECOVER_DDL_LOG_RECOVER; **SQLSTATE:** HY000

  Message: Error in DDL Log recovery during Post-Recovery processing.

  ER_IB_MSG_POST_RECOVER_DDL_LOG_RECOVER was added in 8.0.16.

- **Error number:** MY-013397; **Symbol:** ER_IB_MSG_POST_RECOVER_POST_TS ENCRYPT; **SQLSTATE:** HY000

  ER_IB_MSG_POST_RECOVER_POST_TS_ENCRYPT was added in 8.0.16.

- **Error number:** MY-013398; **Symbol:** ER_IB_MSG_DDL_LOG_FAIL_POST_DDL; **SQLSTATE:** HY000

  Message: Error in DDL Log cleanup during Post-DLL processing.

  ER_IB_MSG_DDL_LOG_FAIL_POST_DDL was added in 8.0.16.
- Error number: MY-013399; Symbol: ER_SERVER_BINLOG_UNSAFE_SYSTEM_FUNCTION; SQLSTATE: HY000
  Message: '%s' statement is unsafe because it uses a system function that may return a different value on the slave.
  ER_SERVER_BINLOG_UNSAFE_SYSTEM_FUNCTION was added in 8.0.16.

- Error number: MY-013400; Symbol: ER_SERVER_UPGRADE_HELP_TABLE_STATUS; SQLSTATE: HY000
  Message: Upgrade of help tables %s.
  ER_SERVER_UPGRADE_HELP_TABLE_STATUS was added in 8.0.16.

- Error number: MY-013401; Symbol: ER_GRP_RPL_SRV_GTID_WAIT_ERROR; SQLSTATE: HY000
  Message: Error when waiting for the server to execute local transactions in order assure the group change proper logging
  ER_GRP_RPL_SRV_GTID_WAIT_ERROR was added in 8.0.16.

- Error number: MY-013402; Symbol: ER_GRP_DELAYED_VCLE_LOGGING; SQLSTATE: HY000
  Message: Unable to log the group change View log event in its exaction position in the log. This will not however affect the group replication recovery process or the overall plugin process.
  ER_GRP_DELAYED_VCLE_LOGGING was added in 8.0.16.

- Error number: MY-013404; Symbol: ER_BINLOG_UNABLE_TO_ROTATE_GTID_TABLE_READONLY; SQLSTATE: HY000
  Message: Unable to create a new binlog file: Table `mysql.gtid_executed` couldn’t be opened. %s
  ER_BINLOG_UNABLE_TO_ROTATE_GTID_TABLE_READONLY was added in 8.0.16.

- Error number: MY-013405; Symbol: ER_NETWORK_NAMESPACES_NOT_SUPPORTED; SQLSTATE: HY000
  Message: Network Namespaces is not supported on this platform
  ER_NETWORK_NAMESPACES_NOT_SUPPORTED was added in 8.0.16.

- Error number: MY-013406; Symbol: ER_UNKNOWN_NETWORK_NAMESPACE; SQLSTATE: HY000
  Message: Unknown network namespace '%s'
  ER_UNKNOWN_NETWORK_NAMESPACE was added in 8.0.16.

- Error number: MY-013407; Symbol: ER_NETWORK_NAMESPACE_NOT_ALLOWED_FOR_WILDCARD_ADDRESS; SQLSTATE: HY000
  Message: Network namespace not allowed for wildcard interface address
  ER_NETWORK_NAMESPACE_NOT_ALLOWED_FOR_WILDCARD_ADDRESS was added in 8.0.16.

- Error number: MY-013408; Symbol: ER_SETNS_FAILED; SQLSTATE: HY000
  Message: setns() failed with error '%s'
  ER_SETNS_FAILED was added in 8.0.16.

- Error number: MY-013409; Symbol: ER_WILDCARD_NOT_ALLOWED_FOR_MULTIADDRESS_BIND; SQLSTATE: HY000
Message: Wildcard address value not allowed for multivalued bind address

ER_WILDCARD_NOT_ALLOWED_FOR_MULTIADDRESS_BIND was added in 8.0.16.

• Error number: MY-013410; Symbol: ER_NETWORK_NAMESPACE_FILE_PATH_TOO_LONG; SQLSTATE: HY000
Message: The path to a special network namespace file is too long. (got %u > max %u)

ER_NETWORK_NAMESPACE_FILE_PATH_TOO_LONG was added in 8.0.16.

• Error number: MY-013411; Symbol: ER_IB_MSG_TOO_LONG_PATH; SQLSTATE: HY000
Message: Cannot create tablespace '%s'. The filepath is too long for this OS.

ER_IB_MSG_TOO_LONG_PATH was added in 8.0.16.

• Error number: MY-013412; Symbol: ER_IB_RECV_FIRST_REC_GROUP_INVALID; SQLSTATE: HY000
Message: The last block of redo had corrupted first_rec_group and became fixed (%u -> %u).

ER_IB_RECV_FIRST_REC_GROUP_INVALID was added in 8.0.16.

• Error number: MY-013413; Symbol: ER_DD_UPGRADE_COMPLETED; SQLSTATE: HY000
Message: Data dictionary upgrade from version '%u' to '%u' completed.

ER_DD_UPGRADE_COMPLETED was added in 8.0.16.

• Error number: MY-013414; Symbol: ER_SSL_SERVER_CERT_VERIFY_FAILED; SQLSTATE: HY000
Message: Server SSL certificate doesn't verify: %s

ER_SSL_SERVER_CERT_VERIFY_FAILED was added in 8.0.16.

• Error number: MY-013415; Symbol: ER_PERSIST_OPTION_USER_TRUNCATED; SQLSTATE: HY000
Message: Truncated a user name for %s that was too long while reading the persisted variables file

ER_PERSIST_OPTION_USER_TRUNCATED was added in 8.0.16.

• Error number: MY-013416; Symbol: ER_PERSIST_OPTION_HOST_TRUNCATED; SQLSTATE: HY000
Message: Truncated a host name for %s that was too long while reading the persisted variables file

ER_PERSIST_OPTION_HOST_TRUNCATED was added in 8.0.16.

• Error number: MY-013417; Symbol: ER_NET_WAIT_ERROR; SQLSTATE: HY000
Message: The wait_timeout period was exceeded, the idle time since last command was too long.

ER_NET_WAIT_ERROR was added in 8.0.16.

• Error number: MY-013418; Symbol: ER_IB_MSG_1285; SQLSTATE: HY000
Message: '%s' found not encrypted while '%s' is ON. Trying to encrypt it now.

ER_IB_MSG_1285 was added in 8.0.16.
• Error number: MY-013419; Symbol: ER_IB_MSG_CLOCK_MONOTONIC_UNSUPPORTED; SQLSTATE: HY000

Message: CLOCK_MONOTONIC is unsupported, so do not change the system time when MySQL is running!

ER_IB_MSG_CLOCK_MONOTONIC_UNSUPPORTED was added in 8.0.16.

• Error number: MY-013420; Symbol: ER_IB_MSG_CLOCK_GETTIME_FAILED; SQLSTATE: HY000

Message: clock_gettime() failed: %s

ER_IB_MSG_CLOCK_GETTIME_FAILED was added in 8.0.16.

• Error number: MY-013421; Symbol: ER_PLUGIN_NOT_EARLY_DUP; SQLSTATE: HY000

Message: Plugin '%s' is not to be used as an "early" plugin. Don't add it to --early-plugin-load, keyring migration etc.

ER_PLUGIN_NOT_EARLY_DUP was added in 8.0.16.

• Error number: MY-013422; Symbol: ER_PLUGIN_NO_INSTALL_DUP; SQLSTATE: HY000

Message: Plugin '%s' is marked as not dynamically installable. You have to stop the server to install it.

ER_PLUGIN_NO_INSTALL_DUP was added in 8.0.16.

• Error number: MY-013425; Symbol: ER_BINLOG_UNSAFE_DEFAULT_EXPRESSION_IN_SUBSTATEMENT; SQLSTATE: HY000

Message: The statement is unsafe because it invokes a trigger or a stored function that modifies a table that has a column with a DEFAULT expression that may return a different value on the slave.

ER_BINLOG_UNSAFE_DEFAULT_EXPRESSION_IN_SUBSTATEMENT was added in 8.0.16.

• Error number: MY-013426; Symbol: ER_GRP_RPL_MEMBER_VER_READ_COMPATIBLE; SQLSTATE: HY000

Message: Member version is read compatible with the group.

ER_GRP_RPL_MEMBER_VER_READ_COMPATIBLE was added in 8.0.16.

• Error number: MY-013427; Symbol: ER_LOCK_ORDER_INIT_FAILED; SQLSTATE: HY000

ER_LOCK_ORDER_INIT_FAILED was added in 8.0.16.

• Error number: MY-013428; Symbol: ER_AUDIT_LOG_KEYRING_ID_TIMESTAMP_VALUE_IS_INVALID; SQLSTATE: HY000

Message: Keyring ID timestamp value is invalid: '%s'

ER_AUDIT_LOG_KEYRING_ID_TIMESTAMP_VALUE_IS_INVALID was added in 8.0.16.
Server Error Message Reference

- **Error number:** MY-013429; **Symbol:** 
  ER_AUDIT_LOG_FILE_NAME_TIMESTAMP_VALUE_IS_MISSING_OR_INVALID; **SQLSTATE:** HY000

  **Message:** Cannot process audit log file. File name timestamp value is missing or invalid: '%s'

  ER_AUDIT_LOG_FILE_NAME_TIMESTAMP_VALUE_IS_MISSING_OR_INVALID was added in 8.0.16.

- **Error number:** MY-013430; **Symbol:** 
  ER_AUDIT_LOG_FILE_NAME_DOES_NOT_HAVE_REQUIRED_FORMAT; **SQLSTATE:** HY000

  **Message:** Cannot process audit log file. File name does not have required format: '%s'

  ER_AUDIT_LOG_FILE_NAME_DOES_NOT_HAVE_REQUIRED_FORMAT was added in 8.0.16.

- **Error number:** MY-013431; **Symbol:** 
  ER_AUDIT_LOG_FILE_NAME_KEYRING_ID_VALUE_IS_MISSING; **SQLSTATE:** HY000

  **Message:** Cannot process audit log file. File name keyring ID value is missing: '%s'

  ER_AUDIT_LOG_FILE_NAME_KEYRING_ID_VALUE_IS_MISSING was added in 8.0.16.

- **Error number:** MY-013432; **Symbol:** 
  ER_AUDIT_LOG_FILE_HAS_BEEN_SUCCESSFULLY_PROCESSED; **SQLSTATE:** HY000

  **Message:** Audit log file has been successfully processed: '%s'

  ER_AUDIT_LOG_FILE_HAS_BEEN_SUCCESSFULLY_PROCESSED was added in 8.0.16.

- **Error number:** MY-013433; **Symbol:** 
  ER_AUDIT_LOG_COULD_NOT_OPEN_FILE_FOR_READING; **SQLSTATE:** HY000

  **Message:** Could not open audit log file for reading: '%s'

  ER_AUDIT_LOG_COULD_NOT_OPEN_FILE_FOR_READING was added in 8.0.16.

- **Error number:** MY-013434; **Symbol:** 
  ER_AUDIT_LOG_INVALID_FILE_CONTENT; **SQLSTATE:** HY000

  **Message:** Invalid audit log file content: '%s'

  ER_AUDIT_LOG_INVALID_FILE_CONTENT was added in 8.0.16.

- **Error number:** MY-013435; **Symbol:** 
  ER_AUDIT_LOG_CANNOT_READ_PASSWORD; **SQLSTATE:** HY000

  **Message:** Cannot read password: '%s'

  ER_AUDIT_LOG_CANNOT_READ_PASSWORD was added in 8.0.16.

- **Error number:** MY-013436; **Symbol:** 
  ER_AUDIT_LOG_CANNOT_STORE_PASSWORD; **SQLSTATE:** HY000

  **Message:** Cannot store password: '%s'

  ER_AUDIT_LOG_CANNOT_STORE_PASSWORD was added in 8.0.16.
• Error number: MY-013437; Symbol: ER_AUDIT_LOG_CANNOT_REMOVE_PASSWORD; SQLSTATE: HY000
  Message: Cannot remove password: '%s'
  ER_AUDIT_LOG_CANNOT_REMOVE_PASSWORD was added in 8.0.16.

• Error number: MY-013438; Symbol: ER_AUDIT_LOG_PASSWORD_HAS_BEEN_COPIED; SQLSTATE: HY000
  Message: 'audit_log' password has been copied into '%s' and will be removed with first purged password.
  ER_AUDIT_LOG_PASSWORD_HAS_BEEN_COPIED was added in 8.0.16.

• Error number: MY-013447; Symbol: ER_LDAP_EMPTY_USERDN_PASSWORD; SQLSTATE: HY000
  Message: Empty user dn or password is not allowed, not attempting LDAP bind.
  ER_LDAP_EMPTY_USERDN_PASSWORD was added in 8.0.16.

• Error number: MY-013449; Symbol: ER_ACL_WRONG_OR_MISSING_ACL_TABLES_LOG; SQLSTATE: HY000
  Message: The current layout of the ACL tables does not conform to the server’s expected layout. They’re either altered, missing or not upgraded from a previous version. However a best effort attempt to read data from these tables will still be made.
  ER_ACL_WRONG_OR_MISSING_ACL_TABLES_LOG was added in 8.0.17.

• Error number: MY-013450; Symbol: ER_LOCK_ORDER_FAILED_WRITE_FILE; SQLSTATE: HY000
  Message: LOCK_ORDER: Failed to write to file <%s>.
  ER_LOCK_ORDER_FAILED_WRITE_FILE was added in 8.0.17.

• Error number: MY-013451; Symbol: ER_LOCK_ORDER_FAILED_READ_FILE; SQLSTATE: HY000
  Message: LOCK_ORDER: Failed to read from file <%s>.
  ER_LOCK_ORDER_FAILED_READ_FILE was added in 8.0.17.

• Error number: MY-013452; Symbol: ER_LOCK_ORDER_MESSAGE; SQLSTATE: HY000
  Message: LOCK_ORDER message: %s
  ER_LOCK_ORDER_MESSAGE was added in 8.0.17.

• Error number: MY-013453; Symbol: ER_LOCK_ORDER_DEPENDENCIES_SYNTAX; SQLSTATE: HY000
  Message: Lock order dependencies file <%s> (%d:%d) - (%d:%d) : %s
  ER_LOCK_ORDER_DEPENDENCIES_SYNTAX was added in 8.0.17.

• Error number: MY-013454; Symbol: ER_LOCK_ORDER_SCANNER_SYNTAX; SQLSTATE: HY000
  Message: Lock order scanner: (%d:%d) - (%d:%d) : %s
  ER_LOCK_ORDER_SCANNER_SYNTAX was added in 8.0.17.

• Error number: MY-013455; Symbol: ER_DATA_DIRECTORY_UNUSABLE_DELETABLE; SQLSTATE: HY000
Message: The newly created data directory %s by --initialize is unusable. You can remove it.

`ER_DATA_DIRECTORY_UNUSABLE_DELETABLE` was added in 8.0.17.

- **Error number:** MY-013456; **Symbol:** `ER_IB_MSG_BTREE_LEVEL_LIMIT_EXCEEDED`; **SQLSTATE:** HY000

  Message: No. of B-tree level created for index %s has crossed the permissible limit. If debug option `innodb_limit_optimistic_insert_debug` is being used try tweaking it to include more records in a page.

`ER_IB_MSG_BTREE_LEVEL_LIMIT_EXCEEDED` was added in 8.0.17.

- **Error number:** MY-013457; **Symbol:** `ER_IB_CLONE_START_STOP`; **SQLSTATE:** HY000

  Message: %s

`ER_IB_CLONE_START_STOP` was added in 8.0.17.

- **Error number:** MY-013458; **Symbol:** `ER_IB_CLONE_OPERATION`; **SQLSTATE:** HY000

  Message: %s

`ER_IB_CLONE_OPERATION` was added in 8.0.17.

- **Error number:** MY-013459; **Symbol:** `ER_IB_CLONE_RESTART`; **SQLSTATE:** HY000

  Message: %s

`ER_IB_CLONE_RESTART` was added in 8.0.17.

- **Error number:** MY-013460; **Symbol:** `ER_IB_CLONE_USER_DATA`; **SQLSTATE:** HY000

  Message: Clone removing all user data for provisioning: %s

`ER_IB_CLONE_USER_DATA` was added in 8.0.17.

- **Error number:** MY-013461; **Symbol:** `ER_IB_CLONE_NON_INNODB_TABLE`; **SQLSTATE:** HY000

  Message: Non innodb table: %s.%s is not cloned and is empty.

`ER_IB_CLONE_NON_INNODB_TABLE` was added in 8.0.17.

- **Error number:** MY-013462; **Symbol:** `ER_CLONE_SHUTDOWN_TRACE`; **SQLSTATE:** HY000

  Message: Clone shutting down server as RESTART failed. Please start server to complete clone operation.

`ER_CLONE_SHUTDOWN_TRACE` was added in 8.0.17.

- **Error number:** MY-013463; **Symbol:** `ER_GRP_RPL_GTID_PURGED_EXTRACT_ERROR`; **SQLSTATE:** HY000

  Message: Error when extracting this member GTID purged set. Operations and checks made to group joiners may be incomplete.

`ER_GRP_RPL_GTID_PURGED_EXTRACT_ERROR` was added in 8.0.17.

- **Error number:** MY-013464; **Symbol:** `ER_GRP_RPL_CLONE_PROCESS_PREPARE_ERROR`; **SQLSTATE:** HY000

  Message: There was an issue when configuring the remote cloning process: %s

`ER_GRP_RPL_CLONE_PROCESS_PREPARE_ERROR` was added in 8.0.17.
• Error number: MY-013465; Symbol: ER_GRP_RPL_CLONE_PROCESS_EXEC_ERROR; SQLSTATE: HY000
  
  Message: There was an issue when cloning from another server: %s
  
  ER_GRP_RPL_CLONE_PROCESS_EXEC_ERROR was added in 8.0.17.

• Error number: MY-013466; Symbol: ER_GRP_RPL_RECOVERY_EVAL_ERROR; SQLSTATE: HY000
  
  Message: There was an issue when trying to evaluate the best distributed recovery strategy while joining:%s
  
  ER_GRP_RPL_RECOVERY_EVAL_ERROR was added in 8.0.17.

• Error number: MY-013467; Symbol: ER_GRP_RPL_NO_POSSIBLE_RECOVERY; SQLSTATE: HY000
  
  Message: No valid or ONLINE members exist to get the missing data from the group. For cloning check if donors of the same version and with clone plugin installed exist. For incremental recovery check if you have donors where the required data was not purged from the binary logs.
  
  ER_GRP_RPL_NO_POSSIBLE_RECOVERY was added in 8.0.17.

• Error number: MY-013468; Symbol: ER_GRP_RPL_CANT_KILL_THREAD; SQLSTATE: HY000
  
  Message: The group replication plugin could not kill the plugin routine for %s. %s
  
  ER_GRP_RPL_CANT_KILL_THREAD was added in 8.0.17.

• Error number: MY-013469; Symbol: ER_GRP_RPL_RECOVERY_STRAT_CLONE_THRESHOLD; SQLSTATE: HY000
  
  Message: Due to the number of missing transactions being higher than the configured threshold of %llu, this member will start distributed recovery using clone.
  
  ER_GRP_RPL_RECOVERY_STRAT_CLONE_THRESHOLD was added in 8.0.17.

• Error number: MY-013470; Symbol: ER_GRP_RPL_RECOVERY_STRAT_CLONE_PURGED; SQLSTATE: HY000
  
  Message: As no ONLINE member has the missing data for recovering in its binary logs, this member will start distributed recovery using clone.
  
  ER_GRP_RPL_RECOVERY_STRAT_CLONE_PURGED was added in 8.0.17.

• Error number: MY-013471; Symbol: ER_GRP_RPL_RECOVERY_STRAT_CHOICE; SQLSTATE: HY000
  
  Message: Distributed recovery will transfer data using: %s
  
  ER_GRP_RPL_RECOVERY_STRAT_CHOICE was added in 8.0.17.

• Error number: MY-013472; Symbol: ER_GRP_RPL_RECOVERY_STRAT_FALLBACK; SQLSTATE: HY000
  
  Message: Due to some issue on the previous step distributed recovery is now executing: %s
  
  ER_GRP_RPL_RECOVERY_STRAT_FALLBACK was added in 8.0.17.
• Error number: MY-013473; Symbol: ER_GRP_RPL_RECOVERY_STRAT_NO_FALLBACK; SQLSTATE: HY000

Message: Due to a critical cloning error or lack of donors, distributed recovery cannot be executed. The member will now leave the group.

ER_GRP_RPL_RECOVERY_STRAT_NO_FALLBACK was added in 8.0.17.

• Error number: MY-013474; Symbol: ER_GRP_RPL_SLAVE_THREAD_ERROR_ON_CLONE; SQLSTATE: HY000

Message: The '%s' thread of channel '%s' will error out as the server will attempt to clone another server.

ER_GRP_RPL_SLAVE_THREAD_ERROR_ON_CLONE was added in 8.0.17.

• Error number: MY-013475; Symbol: ER_UNKNOWN_TABLE_IN_UPGRADE; SQLSTATE: HY000

Message: Unknown table '%s'

ER_UNKNOWN_TABLE_IN_UPGRADE was added in 8.0.17.

• Error number: MY-013476; Symbol: ER_IDENT_CAUSES_TOO_LONG_PATH_IN_UPGRADE; SQLSTATE: HY000

Message: Long database name and identifier for object resulted in path length exceeding %d characters. Path: '%s'.

ER_IDENT_CAUSES_TOO_LONG_PATH_IN_UPGRADE was added in 8.0.17.

• Error number: MY-013477; Symbol: ER_XA_CANT_CREATE_MDL_BACKUP; SQLSTATE: HY000

Message: XA: Failed to take MDL Lock backup of PREPARED XA transaction during client disconnect.

ER_XA_CANT_CREATE_MDL_BACKUP was added in 8.0.13.

• Error number: MY-013478; Symbol: ER_AUDIT_LOG_SUPER_PRIVILEGE_REQUIRED; SQLSTATE: HY000

Message: SUPER privilege or AUDIT_ADMIN role required for '%s'@'%s' user.

ER_AUDIT_LOG_SUPER_PRIVILEGE_REQUIRED was added in 8.0.11.

• Error number: MY-013479; Symbol: ER_AUDIT_LOG_UDF_INVALID_ARGUMENT_TYPE; SQLSTATE: HY000

Message: Invalid argument type

ER_AUDIT_LOG_UDF_INVALID_ARGUMENT_TYPE was added in 8.0.11.

• Error number: MY-013480; Symbol: ER_AUDIT_LOG_UDF_INVALID_ARGUMENT_COUNT; SQLSTATE: HY000

Message: Invalid argument count

ER_AUDIT_LOG_UDF_INVALID_ARGUMENT_COUNT was added in 8.0.11.
- **Error number:** MY-013481; **Symbol:** ER_AUDIT_LOG_HAS_NOT_BEEN_INSTALLED; **SQLSTATE:** HY000
  
  Message: audit_log plugin has not been installed using INSTALL PLUGIN syntax.
  
  ER_AUDIT_LOG_HAS_NOT_BEEN_INSTALLED was added in 8.0.11.

- **Error number:** MY-013482; **Symbol:** ER_AUDIT_LOG_UDF_READ_INVALID_MAX_ARRAY_LENGTH_ARG_TYPE; **SQLSTATE:** HY000
  
  Message: Invalid "max_array_length" argument type.
  
  ER_AUDIT_LOG_UDF_READ_INVALID_MAX_ARRAY_LENGTH_ARG_TYPE was added in 8.0.11.

- **Error number:** MY-013483; **Symbol:** ER_LOG_CANNOT_WRITE_EXTENDED; **SQLSTATE:** HY000
  
  Message: Failed to write to %s: %s (%s)
  
  ER_LOG_CANNOT_WRITE_EXTENDED was added in 8.0.17.

- **Error number:** MY-013484; **Symbol:** ER_UPGRADE_WITH_PARTITIONED_TABLES_REJECTED; **SQLSTATE:** HY000
  
  Message: Upgrading from server version %d with partitioned tables and lower_case_table_names == 1 on a case sensitive file system may cause issues, and is therefore prohibited. To upgrade anyway, restart the new server version with the command line option 'upgrade=FORCE'. When upgrade is completed, please execute 'RENAME TABLE <part_table_name> TO <new_table_name>; RENAME TABLE <new_table_name> TO <part_table_name>;' for each of the partitioned tables. Please see the documentation for further information.
  
  ER_UPGRADE_WITH_PARTITIONED_TABLES_REJECTED was added in 8.0.17, removed after 8.0.18.

- **Error number:** MY-013485; **Symbol:** ER_KEYRING_AWS_INCORRECT_PROXY; **SQLSTATE:** HY000
  
  Message: Incorrect environment variable %s, invalid port: %s
  
  ER_KEYRING_AWS_INCORRECT_PROXY was added in 8.0.18.

- **Error number:** MY-013486; **Symbol:** ER_GRP_RPL_SERVER_SET_TO_OFFLINE_MODE_DUE_TO_ERRORS; **SQLSTATE:** HY000
  
  Message: The server was automatically set into offline mode after an error was detected.
  
  ER_GRP_RPL_SERVER_SET_TO_OFFLINE_MODE_DUE_TO_ERRORS was added in 8.0.18.

- **Error number:** MY-013487; **Symbol:** ER_GRP_RPL_MESSAGE_SERVICE_FATAL_ERROR; **SQLSTATE:** HY000
  
  Message: Message delivery error on message service of Group Replication. The server will now leave the group.
  
  ER_GRP_RPL_MESSAGE_SERVICE_FATAL_ERROR was added in 8.0.18.

- **Error number:** MY-013488; **Symbol:** ER_WARN_WRONG_COMPRESSION_ALGORITHM_LOG; **SQLSTATE:** HY000
  
  Message: Invalid MASTER_COMPRESSION_ALGORITHMS '%s' found in repository for channel '%s'. Resetting to 'uncompressed' (no compression).
  
  ER_WARN_WRONG_COMPRESSION_ALGORITHM_LOG was added in 8.0.18.
•   Error number: MY-013489; Symbol: ER_WARN_WRONG_COMPRESSION_LEVEL_LOG; SQLSTATE: HY000

Message: Invalid MASTER_ZSTD_COMPRESSION_LEVEL found in repository for channel '%s'. Resetting to %u.

ER_WARN_WRONG_COMPRESSION_LEVEL_LOG was added in 8.0.18.

•   Error number: MY-013490; Symbol: ER_PROTOCOL_COMPRESSION_RESET_LOG; SQLSTATE: HY000

Message: Option --protocol-compression-algorithms is reset to default value.

ER_PROTOCOL_COMPRESSION_RESET_LOG was added in 8.0.18.

•   Error number: MY-013491; Symbol: ER_XPLUGIN_COMPRESSION_ERROR; SQLSTATE: HY000

Message: Fatal error while compressing outgoing data - %s

ER_XPLUGIN_COMPRESSION_ERROR was added in 8.0.18.

•   Error number: MY-013492; Symbol: ER_MYSQLBACKUP_MSG; SQLSTATE: HY000

Message: %s

ER_MYSQLBACKUP_MSG was added in 8.0.18.

•   Error number: MY-013493; Symbol: ER_WARN_UNKNOWN_KEYRING.AWS_REGION; SQLSTATE: HY000

Message: Unknown keyring_aws_region '%s'. Connection to AWS KMS may fail.

ER_WARN_UNKNOWN_KEYRING.AWS_REGION was added in 8.0.18.

•   Error number: MY-013494; Symbol: ER_WARN_LOG_PRIVILEGE_CHECKS_USER_DOES_NOT_EXIST; SQLSTATE: HY000

Message: PRIVILEGE_CHECKS_USER for replication channel '%s' was set to `%s`@`%s`, but this is not an existing user. Correct this before starting replication threads.

ER_WARN_LOG_PRIVILEGE_CHECKS_USER_DOES_NOT_EXIST was added in 8.0.18.

•   Error number: MY-013495; Symbol: ER_WARN_LOG_PRIVILEGE_CHECKS_USER_CORRUPT; SQLSTATE: HY000

Message: Invalid, corrupted PRIVILEGE_CHECKS_USER was found in the replication configuration repository for channel '%s'. Use CHANGE MASTER TO PRIVILEGE_CHECKS_USER to correct the configuration.

ER_WARN_LOG_PRIVILEGE_CHECKS_USER_CORRUPT was added in 8.0.18.

•   Error number: MY-013496; Symbol: ER_WARN_LOG_PRIVILEGE_CHECKS_USER_NEEDS_RPL_APPLIER_PRIV; SQLSTATE: HY000

Message: PRIVILEGE_CHECKS_USER for replication channel '%s' was set to `%s`@`%s`, but this user does not have REPLICATION_APPLIER privilege. Correct this before starting the replication threads.

ER_WARN_LOG_PRIVILEGE_CHECKS_USER_NEEDS_RPL_APPLIER_PRIV was added in 8.0.18.
• Error number: MY-013497; Symbol: ER_FILE_PRIVILEGE_FOR_REPLICATION_CHECKS; SQLSTATE: HY000

Message: The PRIVILEGE_CHECKS_USER for channel '%s' would need FILE privilege to execute a LOAD DATA INFILE statement replicated in statement format. Consider using binlog_format=ROW on master. If the replicated events are trusted, recover from the failure by temporarily granting FILE to the PRIVILEGE_CHECKS_USER.

ER_FILE_PRIVILEGE_FOR_REPLICATION_CHECKS was added in 8.0.18.

• Error number: MY-013498; Symbol: ER_RPL_SLAVE_SQL_THREAD_STARTING_WITH_PRIVILEGE_CHECKS; SQLSTATE: HY000

Message: Slave SQL thread%s initialized, starting replication in log '%s' at position %s, relay log '%s' position: %s, user: '%s'@'%s', roles: %s

ER_RPL_SLAVE_SQL_THREAD_STARTING_WITH_PRIVILEGE_CHECKS was added in 8.0.18.

• Error number: MY-013499; Symbol: ER_AUDIT_LOG_CANNOT_GENERATE_PASSWORD; SQLSTATE: HY000

Message: Cannot generate password: '%s'

ER_AUDIT_LOG_CANNOT_GENERATE_PASSWORD was added in 8.0.18.

• Error number: MY-013500; Symbol: ER_INIT_FAILED_TO_GENERATE_ROOT_PASSWORD; SQLSTATE: HY000

Message: Failed to generate a random password for root. Probably not enough entropy.

ER_INIT_FAILED_TO_GENERATE_ROOT_PASSWORD was added in 8.0.18.

• Error number: MY-013501; Symbol: ER_PLUGIN_LOAD_OPTIONS_IGNORED; SQLSTATE: HY000

Message: Ignoring --plugin-load[_add] list as the server is running with --initialize(-insecure).

ER_PLUGIN_LOAD_OPTIONS_IGNORED was added in 8.0.18.

• Error number: MY-013502; Symbol: ER_WARN_AUTH_ID_WITH_SYSTEM_USER_PRIV_IN_MANDATORY_ROLES; SQLSTATE: HY000

Message: Cannot set mandatory_roles: AuthId `%s`@`%s` has '%s' privilege. AuthId(s) set in the mandatory_roles are ignored.

ER_WARN_AUTH_ID_WITH_SYSTEM_USER_PRIV_IN_MANDATORY_ROLES was added in 8.0.18.

• Error number: MY-013503; Symbol: ER_IB_MSG_SKIP_HIDDEN_DIR; SQLSTATE: HY000

Message: Directory '%s' will not be scanned because it is a hidden directory.

ER_IB_MSG_SKIP_HIDDEN_DIR was added in 8.0.18.

• Error number: MY-013504; Symbol: ER_WARN_RPL_RECOVERY_NO_ROTATE_EVENT_FROM_MASTER_EOF; SQLSTATE: HY000

Message: Server was not able to find a rotate event from master server to initialize relay log recovery for channel '%s'. Skipping relay log recovery for the channel.

ER_WARN_RPL_RECOVERY_NO_ROTATE_EVENT_FROM_MASTER_EOF was added in 8.0.19.
• Error number: MY-013505; Symbol: ER_IB_LOB_ROLLBACK_INDEX_LEN; SQLSTATE: HY000

Message: Rolling back LOB for transaction %llu undo number %llu : current index length %llu.
(Iteration %llu)

ER_IB_LOB_ROLLBACK_INDEX_LEN was added in 8.0.19.

• Error number: MY-013506; Symbol: ER_CANT_PROCESS_EXPRESSION_FOR_GENERATED_COLUMN_TO_DD; SQLSTATE: HY000

Message: Error in processing (possibly deprecated) expression or function '%s' for generated column %s.%s.%s

ER_CANT_PROCESS_EXPRESSION_FOR_GENERATED_COLUMN_TO_DD was added in 8.0.19.

• Error number: MY-013507; Symbol: ER_RPL_SLAVE_QUEUE_EVENT_FAILED_INVALID_NON_ROW_FORMAT; SQLSTATE: HY000

Message: The queue event failed for channel '%s' as an invalid event according to REQUIRE_ROW_FORMAT was found.

ER_RPL_SLAVE_QUEUE_EVENT_FAILED_INVALID_NON_ROW_FORMAT was added in 8.0.19.

• Error number: MY-013508; Symbol: ER_RPL_SLAVE_APPLY_LOG_EVENT_FAILED_INVALID_NON_ROW_FORMAT; SQLSTATE: HY000

Message: The application of relay events failed for channel '%s' as an invalid event according to REQUIRE_ROW_FORMAT was found.

ER_RPL_SLAVE_APPLY_LOG_EVENT_FAILED_INVALID_NON_ROW_FORMAT was added in 8.0.19.

• Error number: MY-013509; Symbol: ER_LOG_PRIV_CHECKS_REQUIRE_ROW_FORMAT_NOT_SET; SQLSTATE: HY000

Message: PRIVILEGE_CHECKS_USER for replication channel '%s' can't be set to `%s`@`%s` unless REQUIRE_ROW_FORMAT is also set to %d.

ER_LOG_PRIV_CHECKS_REQUIRE_ROW_FORMAT_NOT_SET was added in 8.0.19.

• Error number: MY-013510; Symbol: ER_RPL_SLAVE_SQL_THREAD_DETECTED_UNEXPECTED_EVENTSEQUENCE; SQLSTATE: HY000

Message: An unexpected event sequence was detected by the SQL thread while applying an event.

ER_RPL_SLAVE_SQL_THREAD_DETECTED_UNEXPECTED_EVENTSEQUENCE was added in 8.0.19.

• Error number: MY-013511; Symbol: ER_IB_MSG_UPGRADE_PARTITION_FILE; SQLSTATE: HY000

Message: Updating partition file name '%s' to '%s' and all other partition files during upgrade

ER_IB_MSG_UPGRADE_PARTITION_FILE was added in 8.0.19.

• Error number: MY-013512; Symbol: ER_IB_MSG_DOWNGRADE_PARTITION_FILE; SQLSTATE: HY000

Message: Updating partition file name '%s' to '%s' and all other partition files during downgrade

ER_IB_MSG_DOWNGRADE_PARTITION_FILE was added in 8.0.19.
• Error number: MY-013513; Symbol: ER_IB_MSG_UPGRADE_PARTITION_FILE_IMPORT; SQLSTATE: HY000

Message: Updating partition file name '%s' to '%s' for import

ER_IB_MSG_UPGRADE_PARTITION_FILE_IMPORT was added in 8.0.19.

• Error number: MY-013514; Symbol: ER_IB_WARN_OPEN_PARTITION_FILE; SQLSTATE: HY000

Message: Unable to open partition file with new name '%s'. Please check if innodb_directories is set to include all external file paths

ER_IB_WARN_OPEN_PARTITION_FILE was added in 8.0.19.

• Error number: MY-013515; Symbol: ER_IB_MSG_FIL_STATE_MOVED_CORRECTED; SQLSTATE: HY000

Message: %s DD ID: %llu - Partition tablespace %u, name '%s' is corrected to '%s'

ER_IB_MSG_FIL_STATE_MOVED_CORRECTED was added in 8.0.19.

• Error number: MY-013516; Symbol: ER_IB_MSG_FIL_STATE_MOVED_CHANGED_PATH; SQLSTATE: HY000

Message: %s DD ID: %llu - Tablespace %u, name '%s', '%s' is moved to '%s'

ER_IB_MSG_FIL_STATE_MOVED_CHANGED_PATH was added in 8.0.19.

• Error number: MY-013517; Symbol: ER_IB_MSG_FIL_STATE_MOVED_CHANGED_NAME; SQLSTATE: HY000

Message: %s DD ID: %llu - Partition tablespace %u, name '%s', '%s' is updated to '%s'

ER_IB_MSG_FIL_STATE_MOVED_CHANGED_NAME was added in 8.0.19.

• Error number: MY-013518; Symbol: ER_IB_MSG_FIL_STATE_MOVED_TOO_MANY; SQLSTATE: HY000

Message: %s Too many files have been moved, disabling logging of detailed messages

ER_IB_MSG_FIL_STATE_MOVED_TOO_MANY was added in 8.0.19.

• Error number: MY-013519; Symbol: ER_GR_ELECTED_PRIMARY_GTID_INFORMATION; SQLSTATE: HY000

Message: Elected primary member %s: %s

ER_GR_ELECTED_PRIMARY_GTID_INFORMATION was added in 8.0.19.

• Error number: MY-013520; Symbol: ER_SCHEMA_NAME_IN_UPPER_CASE_NOT_ALLOWED; SQLSTATE: HY000

Message: Schema name '%s' containing upper case characters is not allowed with lower_case_table_names = 1.

ER_SCHEMA_NAME_IN_UPPER_CASE_NOT_ALLOWED was added in 8.0.19.
• Error number: MY-013521; Symbol: ER_TABLE_NAME_IN_UPPER_CASE_NOT_ALLOWED; SQLSTATE: HY000

Message: Table name '%s.%s' containing upper case characters is not allowed with lower_case_table_names = 1.

ER_TABLE_NAME_IN_UPPER_CASE_NOT_ALLOWED was added in 8.0.19.

• Error number: MY-013522; Symbol: ER_SCHEMA_NAME_IN_UPPER_CASE_NOT_ALLOWED_FOR_FK; SQLSTATE: HY000

Message: Schema name '%s' containing upper case characters, used by foreign key '%s' in table '%s.%s', is not allowed with lower_case_table_names = 1.

ER_SCHEMA_NAME_IN_UPPER_CASE_NOT_ALLOWED_FOR_FK was added in 8.0.19.

• Error number: MY-013523; Symbol: ER_TABLE_NAME_IN_UPPER_CASE_NOT_ALLOWED_FOR_FK; SQLSTATE: HY000

Message: Table name '%s.%s' containing upper case characters, used by foreign key '%s' in table '%s.%s', is not allowed with lower_case_table_names = 1.

ER_TABLE_NAME_IN_UPPER_CASE_NOT_ALLOWED_FOR_FK was added in 8.0.19.

• Error number: MY-013524; Symbol: ER_IB_MSG_DICT_PARTITION_NOT_FOUND; SQLSTATE: HY000

Message: Table Partition: %s is not found in InnoDB dictionary

ER_IB_MSG_DICT_PARTITION_NOT_FOUND was added in 8.0.19.

• Error number: MY-013525; Symbol: ER_ACCESS_DENIED_FOR_USER_ACCOUNT_BLOCKED_BY_PASSWORD_LOCK; SQLSTATE: HY000

Message: Access denied for user '%s'@'%s'. Account is blocked for %s day(s) (%s day(s) remaining) due to %u consecutive failed logins. Use FLUSH PRIVILEGES or ALTER USER to reset.

ER_ACCESS_DENIED_FOR_USER_ACCOUNT_BLOCKED_BY_PASSWORD_LOCK was added in 8.0.19.

• Error number: MY-013526; Symbol: ER_INNODB_OUT_OF_RESOURCES; SQLSTATE: HY000

Message: %s

ER_INNODB_OUT_OF_RESOURCES was added in 8.0.19.

• Error number: MY-013527; Symbol: ER_DD_UPGRADE_FOUND PREPARED_XA_TRANSACTION; SQLSTATE: HY000

Message: Upgrade cannot proceed due to an existing prepared XA transaction.

ER_DD_UPGRADE_FOUND PREPARED_XA_TRANSACTION was added in 8.0.19.

• Error number: MY-013528; Symbol: ER_MIGRATE_TABLE_TO_DD_OOM; SQLSTATE: HY000

Message: Could not allocate memory for key_info when migrating table %s.%s

ER_MIGRATE_TABLE_TO_DD_OOM was added in 8.0.19.
• Error number: MY-013529; Symbol: ER_RPL_RELAY_LOG_RECOVERY_INFO_AFTER_CLONE; SQLSTATE: HY000
Message: Relay log information for channel '%s' was found after a clone operation. Relay log recovery will be executed to adjust positions and file information for this new server. Should that automatic procedure fail please adjust the positions through 'CHANGE MASTER TO' ER_RPL_RELAY_LOG_RECOVERY_INFO_AFTER_CLONE was added in 8.0.19.

• Error number: MY-013530; Symbol: ER_IB_MSG_57_UNDO_SPACE_DELETE_FAIL; SQLSTATE: HY000
Message: Failed to delete 5.7 undo tablespace: %s during upgrade ER_IB_MSG_57_UNDO_SPACE_DELETE_FAIL was added in 8.0.19.

• Error number: MY-013531; Symbol: ER_IB_MSG_DBLWR_1285; SQLSTATE: HY000
Message: Empty doublewrite file: %s ER_IB_MSG_DBLWR_1285 was added in 8.0.20.

• Error number: MY-013532; Symbol: ER_IB_MSG_DBLWR_1286; SQLSTATE: HY000
Message: Using '%s' for doublewrite ER_IB_MSG_DBLWR_1286 was added in 8.0.20.

• Error number: MY-013533; Symbol: ER_IB_MSG_DBLWR_1287; SQLSTATE: HY000
Message: Error reading doublewrite buffer from the system tablespace ER_IB_MSG_DBLWR_1287 was added in 8.0.20.

• Error number: MY-013534; Symbol: ER_IB_MSG_DBLWR_1288; SQLSTATE: HY000
Message: Cannot create doublewrite buffer: you must increase your buffer pool size. Cannot continue operation. ER_IB_MSG_DBLWR_1288 was added in 8.0.20.

• Error number: MY-013535; Symbol: ER_IB_MSG_DBLWR_1290; SQLSTATE: HY000
Message: The page in the doublewrite file is corrupt. Cannot continue operation. You can try to recover the database with innodb_force_recovery=6 ER_IB_MSG_DBLWR_1290 was added in 8.0.20.

• Error number: MY-013536; Symbol: ER_IB_MSG_DBLWR_1291; SQLSTATE: HY000

ER_NDBINFO_UPGRADING_SCHEMA was added in 8.0.20.

- Error number: MY-013573; Symbol: ER_NDBINFO_NOT_UPGRADING_SCHEMA; SQLSTATE: HY000
  
  Message: Installed ndbinfo schema is current. Not upgrading.

ER_NDBINFO_NOT_UPGRADING_SCHEMA was added in 8.0.20.

- Error number: MY-013574; Symbol: ER_NDBINFO_UPGRADING_SCHEMA_FAIL; SQLSTATE: HY000
  
  Message: Failed to upgrade ndbinfo schema.

ER_NDBINFO_UPGRADING_SCHEMA_FAIL was added in 8.0.20.

- Error number: MY-013575; Symbol: ER_IB_MSG_CREATE_LOG_FILE; SQLSTATE: HY000
  
  Message: Creating log file %s

ER_IB_MSG_CREATE_LOG_FILE was added in 8.0.20.

- Error number: MY-013576; Symbol: ER_IB_MSG_INNODB_START_INITIALIZE; SQLSTATE: HY000
  
  Message: InnoDB initialization has started.

ER_IB_MSG_INNODB_START_INITIALIZE was added in 8.0.20.

- Error number: MY-013577; Symbol: ER_IB_MSG_INNODB_END_INITIALIZE; SQLSTATE: HY000
  
  Message: InnoDB initialization has ended.

ER_IB_MSG_INNODB_END_INITIALIZE was added in 8.0.20.

B.3.2 Client Error Message Reference

Client error messages originate from within the MySQL client library. Here is an example client error message, as displayed by the mysql client:

shell> mysql -h no-such-host
ERROR 2005 (HY000): Unknown MySQL server host 'no-such-host' (0)

Each client error message includes an error code, SQLSTATE value, and message string, as described in Section B.1, “Error Message Sources and Components”. These components are available as described in Section B.2, “Error Information Interfaces”. For client errors, the SQLSTATE value is always ‘HY000’ (general error), so it is not meaningful for distinguishing one client error from another.
The client library also makes available to host client programs any errors that originate on the server side and are received by the client from the server. For a list of server-side errors, see Section B.3.1, “Server Error Message Reference”.

In addition to the errors in the following list, the client library can also produce error messages that have error codes in the range from 1 to 999. See Section B.3.3, “Global Error Message Reference”

- Error number: 2000; Symbol: CR_UNKNOWN_ERROR;
  Message: Unknown MySQL error

- Error number: 2001; Symbol: CR_SOCKET_CREATE_ERROR;
  Message: Can't create UNIX socket (%d)

- Error number: 2002; Symbol: CR_CONNECTION_ERROR;
  Message: Can't connect to local MySQL server through socket '%s' (%d)

- Error number: 2003; Symbol: CR_CONN_HOST_ERROR;
  Message: Can't connect to MySQL server on '%s' (%d)

- Error number: 2004; Symbol: CR_IPSOCK_ERROR;
  Message: Can't create TCP/IP socket (%d)

- Error number: 2005; Symbol: CR_UNKNOWN_HOST;
  Message: Unknown MySQL server host '%s' (%d)

- Error number: 2006; Symbol: CR_SERVER_GONE_ERROR;
  Message: MySQL server has gone away

- Error number: 2007; Symbol: CR_VERSION_ERROR;
  Message: Protocol mismatch; server version = %d, client version = %d

- Error number: 2008; Symbol: CR_OUT_OF_MEMORY;
  Message: MySQL client ran out of memory

- Error number: 2009; Symbol: CR_WRONG_HOST_INFO;
  Message: Wrong host info

- Error number: 2010; Symbol: CR_LOCALHOST_CONNECTION;
  Message: Localhost via UNIX socket

- Error number: 2011; Symbol: CR_TCP_CONNECTION;
  Message: %s via TCP/IP

- Error number: 2012; Symbol: CR_SERVER_HANDSHAKE_ERR;
  Message: Error in server handshake

- Error number: 2013; Symbol: CR_SERVER_LOST;
  Message: Lost connection to MySQL server during query

- Error number: 2014; Symbol: CR_COMMANDS_OUT_OF_SYNC;
Message: Commands out of sync; you can't run this command now

Commands were executed in an improper order. This error occurs when a function is called that is not appropriate for the current state of the connection. For example, if `mysql_stmt_fetch()` is not called enough times to read an entire result set (that is, enough times to return `MYSQL_NO_DATA`), this error may occur for the following C API call.

- **Error number:** 2015; Symbol: `CR_NAMEDPIPE_CONNECTION`;
  - Message: Named pipe: %s
- **Error number:** 2016; Symbol: `CR_NAMEDPIPEWAIT_ERROR`;
  - Message: Can't wait for named pipe to host: %s pipe: %s (%lu)
- **Error number:** 2017; Symbol: `CR_NAMEDPIPEOPEN_ERROR`;
  - Message: Can't open named pipe to host: %s pipe: %s (%lu)
- **Error number:** 2018; Symbol: `CR_NAMEDPIPESETSTATE_ERROR`;
  - Message: Can't set state of named pipe to host: %s pipe: %s (%lu)
- **Error number:** 2019; Symbol: `CR_CANT_READ_CHARSET`;
  - Message: Can't initialize character set %s (path: %s)
- **Error number:** 2020; Symbol: `CR_NET_PACKET_TOO_LARGE`;
  - Message: Got packet bigger than 'max_allowed_packet' bytes
- **Error number:** 2021; Symbol: `CR_EMBEDDED_CONNECTION`;
  - Message: Embedded server
- **Error number:** 2022; Symbol: `CR_PROBE_SLAVE_STATUS`;
  - Message: Error on SHOW SLAVE STATUS:
- **Error number:** 2023; Symbol: `CR_PROBE_SLAVE_HOSTS`;
  - Message: Error on SHOW SLAVE HOSTS:
- **Error number:** 2024; Symbol: `CR_PROBE_SLAVE_CONNECT`;
  - Message: Error connecting to slave:
- **Error number:** 2025; Symbol: `CR_PROBE_MASTER_CONNECT`;
  - Message: Error connecting to master:
- **Error number:** 2026; Symbol: `CR_SSL_CONNECTION_ERROR`;
  - Message: SSL connection error: %s
- **Error number:** 2027; Symbol: `CR_MALFORMED_PACKET`;
  - Message: Malformed packet
- **Error number:** 2028; Symbol: `CR_WRONG_LICENSE`;
  - Message: This client library is licensed only for use with MySQL servers having '%s' license
- **Error number:** 2029; Symbol: `CR_NULL_POINTER`;
Message: Invalid use of null pointer

• Error number: 2030; Symbol: CR_NO_PREPARE_STMT;
  Message: Statement not prepared
• Error number: 2031; Symbol: CR_PARAMS_NOT_BOUND;
  Message: No data supplied for parameters in prepared statement
• Error number: 2032; Symbol: CR_DATA_TRUNCATED;
  Message: Data truncated
• Error number: 2033; Symbol: CR_NO_PARAMETERS_EXISTS;
  Message: No parameters exist in the statement
• Error number: 2034; Symbol: CR_INVALID_PARAMETER_NO;
  Message: Invalid parameter number

The column number for mysql_stmt_fetch_column() was invalid.
The parameter number for mysql_stmt_send_long_data() was invalid.
A key name was empty or the amount of connection attribute data for mysql_options4() exceeds
the 64KB limit.

• Error number: 2035; Symbol: CR_INVALID_BUFFER_USE;
  Message: Can't send long data for non-string/non-binary data types (parameter: %d)
• Error number: 2036; Symbol: CR_UNSUPPORTED_PARAM_TYPE;
  Message: Using unsupported buffer type: %d (parameter: %d)
• Error number: 2037; Symbol: CR_SHARED_MEMORY_CONNECTION;
  Message: Shared memory: %s

• Error number: 2038; Symbol: CR_SHARED_MEMORY_CONNECT_REQUEST_ERROR;
  Message: Can't open shared memory; client could not create request event (%lu)
• Error number: 2039; Symbol: CR_SHARED_MEMORY_CONNECT_ANSWER_ERROR;
  Message: Can't open shared memory; no answer event received from server (%lu)
• Error number: 2040; Symbol: CR_SHARED_MEMORY_CONNECT_FILE_MAP_ERROR;
  Message: Can't open shared memory; server could not allocate file mapping (%lu)
• Error number: 2041; Symbol: CR_SHARED_MEMORY_CONNECT_MAP_ERROR;
  Message: Can't open shared memory; server could not get pointer to file mapping (%lu)
• Error number: 2042; Symbol: CR_SHARED_MEMORY_FILE_MAP_ERROR;
  Message: Can't open shared memory; client could not allocate file mapping (%lu)
• Error number: 2043; Symbol: CR_SHARED_MEMORY_MAP_ERROR;
  Message: Can't open shared memory; client could not get pointer to file mapping (%lu)
• Error number: 2044; Symbol: CR_SHARED_MEMORY_EVENT_ERROR;
Message: Can't open shared memory; client could not create %s event (%lu)
• Error number: 2045; Symbol: CR_SHARED_MEMORY_CONNECT_ABANDONED_ERROR;
Message: Can't open shared memory; no answer from server (%lu)
• Error number: 2046; Symbol: CR_SHARED_MEMORY_CONNECT_SET_ERROR;
Message: Can't open shared memory; cannot send request event to server (%lu)
• Error number: 2047; Symbol: CR_CONN_UNKNOW_PROTOCOL;
Message: Wrong or unknown protocol
• Error number: 2048; Symbol: CR_INVALID_CONN_HANDLE;
Message: Invalid connection handle
• Error number: 2049; Symbol: CR_UNUSED_1;
Message: Connection using old (pre-4.1.1) authentication protocol refused (client option 'secure_auth' enabled)
• Error number: 2050; Symbol: CR_FETCH_CANCELED;
Message: Row retrieval was canceled by mysql_stmt_close() call
• Error number: 2051; Symbol: CR_NO_DATA;
Message: Attempt to read column without prior row fetch
• Error number: 2052; Symbol: CR_NO_STMT_METADATA;
Message: Prepared statement contains no metadata
• Error number: 2053; Symbol: CR_NO_RESULT_SET;
Message: Attempt to read a row while there is no result set associated with the statement
• Error number: 2054; Symbol: CR_NOT_IMPLEMENTED;
Message: This feature is not implemented yet
• Error number: 2055; Symbol: CR_SERVER_LOST_EXTENDED;
Message: Lost connection to MySQL server at '%s', system error: %d
• Error number: 2056; Symbol: CR_STMT_CLOSED;
Message: Statement closed indirectly because of a preceding %s() call
• Error number: 2057; Symbol: CR_NEW_STMT_METADATA;
Message: The number of columns in the result set differs from the number of bound buffers. You must reset the statement, rebind the result set columns, and execute the statement again
• Error number: 2058; Symbol: CR_ALREADY_CONNECTED;
Message: This handle is already connected. Use a separate handle for each connection.
• Error number: 2059; Symbol: CR_AUTH_PLUGIN_CANNOT_LOAD;
Message: Authentication plugin '%s' cannot be loaded: %s
Global Error Message Reference

- **Error number:** 2060; Symbol: CR_DUPLICATE_CONNECTION_ATTR;
  Message: There is an attribute with the same name already
  A duplicate connection attribute name was specified for `mysql_options4()`.

- **Error number:** 2061; Symbol: CR_AUTH_PLUGIN_ERR;
  Message: Authentication plugin '%s' reported error: %s

- **Error number:** 2062; Symbol: CR_INSECURE_API_ERR;
  Message: Insecure API function call: '%s' Use instead: '%s'
  An insecure function call was detected. Modify the application to use the suggested alternative function instead.

- **Error number:** 2063; Symbol: CR_FILE_NAME_TOO_LONG;
  Message: File name is too long
  `CR_FILE_NAME_TOO_LONG` was added in 8.0.1.

- **Error number:** 2064; Symbol: CR_SSL_FIPS_MODE_ERR;
  Message: Set FIPS mode ON/STRICT failed
  `CR_SSL_FIPS_MODE_ERR` was added in 8.0.11.

- **Error number:** 2065; Symbol: CR_COMPRESSION_NOT_SUPPORTED;
  Message: Compression protocol not supported with asynchronous protocol
  `CR_COMPRESSION_NOT_SUPPORTED` was added in 8.0.16.

- **Error number:** 2066; Symbol: CR_COMPRESSION_WRONGLY_CONFIGURED;
  Message: Connection failed due to wrongly configured compression algorithm
  `CR_COMPRESSION_WRONGLY_CONFIGURED` was added in 8.0.18.

- **Error number:** 2067; Symbol: CR_KERBEROS_USER_NOT_FOUND;
  Message: SSO user not found, Please perform SSO authentication using kerberos.
  `CR_KERBEROS_USER_NOT_FOUND` was added in 8.0.20.

**B.3.3 Global Error Message Reference**

This section lists “global” error messages that are shared in the sense that they can be produced by the MySQL server or by MySQL client programs. These errors have error codes in the range from 1 to 999.

Each global error message includes an error code, SQLSTATE value, and message string, as described in Section B.1, “Error Message Sources and Components”. These components are available as described in Section B.2, “Error Information Interfaces”. For global errors, the SQLSTATE value is always 'HY000' (general error), so it is not meaningful for distinguishing one client error from another.

If the server writes a message to the error log that has a global error code, it pads the error code with leading zeros to six digits and adds a prefix of MY- (example: `MY-000022`). The following list displays error codes in that format.

If a client returns a message with a global error code, it adds no zero-padding or prefix to the error code.
• Error number: 1; Symbol: EE_CANTCREATEFILE;
  Message: Can't create/write to file '%s' (OS errno %d - %s)
• Error number: 2; Symbol: EE_READ;
  Message: Error reading file '%s' (OS errno %d - %s)
• Error number: 3; Symbol: EE_WRITE;
  Message: Error writing file '%s' (OS errno %d - %s)
• Error number: 4; Symbol: EE_BADCLOSE;
  Message: Error on close of '%s' (OS errno %d - %s)
• Error number: 5; Symbol: EE_OUTOFMEMORY;
  Message: Out of memory (Needed %u bytes)
• Error number: 6; Symbol: EE_DELETE;
  Message: Error on delete of '%s' (OS errno %d - %s)
• Error number: 7; Symbol: EE_LINK;
  Message: Error on rename of '%s' to '%s' (OS errno %d - %s)
• Error number: 9; Symbol: EE_EOFERR;
  Message: Unexpected EOF found when reading file '%s' (OS errno %d - %s)
• Error number: 10; Symbol: EE_CANTLOCK;
  Message: Can't lock file (OS errno %d - %s)
• Error number: 11; Symbol: EE_CANTUNLOCK;
  Message: Can't unlock file (OS errno %d - %s)
• Error number: 12; Symbol: EE_DIR;
  Message: Can't read dir of '%s' (OS errno %d - %s)
• Error number: 13; Symbol: EE_STAT;
  Message: Can't get stat of '%s' (OS errno %d - %s)
• Error number: 14; Symbol: EE_CANT_CHSIZE;
  Message: Can't change size of file (OS errno %d - %s)
• Error number: 15; Symbol: EE_CANT_OPEN_STREAM;
  Message: Can't open stream from handle (OS errno %d - %s)
• Error number: 16; Symbol: EE_GETWD;
  Message: Can't get working directory (OS errno %d - %s)
• Error number: 17; Symbol: EE_SETWD;
  Message: Can't change dir to '%s' (OS errno %d - %s)
• Error number: 18; Symbol: EE_LINK_WARNING;
Message: Warning: '%s' had %d links
•   Error number: 19; Symbol: EE_OPEN_WARNING;

Message: Warning: %d files and %d streams are left open
•   Error number: 20; Symbol: EE_DISK_FULL;

Message: Disk is full writing '%s' (OS errno %d - %s). Waiting for someone to free space...
•   Error number: 21; Symbol: EE_CANT_MKDIR;

Message: Can't create directory '%s' (OS errno %d - %s)
•   Error number: 22; Symbol: EE_UNKNOWN_CHARSET;

Message: Character set '%s' is not a compiled character set and is not specified in the '%s' file
•   Error number: 23; Symbol: EE_OUT_OF_FILERESOURCES;

Message: Out of resources when opening file '%s' (OS errno %d - %s)
•   Error number: 24; Symbol: EE_CANT_READLINK;

Message: Can't read value for symlink '%s' (Error %d - %s)
•   Error number: 25; Symbol: EE_CANT_SYMLINK;

Message: Can't create symlink '%s' pointing at '%s' (Error %d - %s)
•   Error number: 26; Symbol: EE_REALPATH;

Message: Error on realpath() on '%s' (Error %d - %s)
•   Error number: 27; Symbol: EE_SYNC;

Message: Can't sync file '%s' to disk (OS errno %d - %s)
•   Error number: 28; Symbol: EE_UNKNOWN_COLLATION;

Message: Collation '%s' is not a compiled collation and is not specified in the '%s' file
•   Error number: 29; Symbol: EE_FILENOTFOUND;

Message: File '%s' not found (OS errno %d - %s)
•   Error number: 30; Symbol: EE_FILE_NOT_CLOSED;

Message: File '%s' (fileno: %d) was not closed
•   Error number: 31; Symbol: EE_CHANGE_OWNERSHIP;

Message: Cannot change ownership of the file '%s' (OS errno %d - %s)
•   Error number: 32; Symbol: EE_CHANGE_PERMISSIONS;

Message: Cannot change permissions of the file '%s' (OS errno %d - %s)
•   Error number: 33; Symbol: EE_CANT_SEEK;

Message: Cannot seek in file '%s' (OS errno %d - %s)
•   Error number: 34; Symbol: EE_CAPACITY_EXCEEDED;
Message: Memory capacity exceeded (capacity %llu bytes)

•   Error number: 35; Symbol: EE_DISK_FULL_WITH_RETRY_MSG;
Message: Disk is full writing '%s' (OS errno %d - %s). Waiting for someone to free space... Retry in %d secs. Message reprinted in %d secs.
EE_DISK_FULL_WITH_RETRY_MSG was added in 8.0.13.

•   Error number: 36; Symbol: EE_FAILED_TO_CREATE_TIMER;
Message: Failed to create timer (OS errno %d).
EE_FAILED_TO_CREATE_TIMER was added in 8.0.13.

•   Error number: 37; Symbol: EE_FAILED_TO_DELETE_TIMER;
Message: Failed to delete timer (OS errno %d).
EE_FAILED_TO_DELETE_TIMER was added in 8.0.13.

•   Error number: 38; Symbol: EE_FAILED_TO_CREATE_TIMER_QUEUE;
Message: Failed to create timer queue (OS errno %d).
EE_FAILED_TO_CREATE_TIMER_QUEUE was added in 8.0.13.

•   Error number: 39; Symbol: EE_FAILED_TO_START_TIMER_NOTIFY_THREAD;
Message: Failed to start timer notify thread.
EE_FAILED_TO_START_TIMER_NOTIFY_THREAD was added in 8.0.13.

•   Error number: 40; Symbol: EE_FAILED_TO_CREATE_TIMER_NOTIFY_THREAD_INTERRUPT_EVENT;
Message: Failed to create event to interrupt timer notifier thread (OS errno %d).
EE_FAILED_TO_CREATE_TIMER_NOTIFY_THREAD_INTERRUPT_EVENT was added in 8.0.13.

•   Error number: 41; Symbol: EE_EXITING_TIMER_NOTIFY_THREAD;
Message: Failed to register timer event with queue (OS errno %d), exiting timer notifier thread.
EE_EXITING_TIMER_NOTIFY_THREAD was added in 8.0.13.

•   Error number: 42; Symbol: EE_WIN_LIBRARY_LOAD_FAILED;
Message: LoadLibrary("kernel32.dll") failed: GetLastError returns %lu.
EE_WIN_LIBRARY_LOAD_FAILED was added in 8.0.13.

•   Error number: 43; Symbol: EE_WIN_RUN_TIME_ERROR_CHECK;
Message: %s.
EE_WIN_RUN_TIME_ERROR_CHECK was added in 8.0.13.

•   Error number: 44; Symbol: EE_FAILED_TO_DETERMINE_LARGE_PAGE_SIZE;
Message: Failed to determine large page size.
EE_FAILED_TO_DETERMINE_LARGE_PAGE_SIZE was added in 8.0.13.
- Error number: 45; Symbol: **EE_FAILED_TO_KILL_ALL_THREADS**;
  Message: Error in my_thread_global_end(): %d thread(s) did not exit.
  **EE_FAILED_TO_KILL_ALL_THREADS** was added in 8.0.13.

- Error number: 46; Symbol: **EE_FAILED_TO_CREATE_IO_COMPLETION_PORT**;
  Message: Failed to create IO completion port (OS errno %d).
  **EE_FAILED_TO_CREATE_IO_COMPLETION_PORT** was added in 8.0.13.

- Error number: 47; Symbol: **EE_FAILED_TO_OPEN_DEFAULTS_FILE**;
  Message: Failed to open required defaults file: %s
  **EE_FAILED_TO_OPEN_DEFAULTS_FILE** was added in 8.0.13.

- Error number: 48; Symbol: **EE_FAILED_TO_HANDLE_DEFAULTS_FILE**;
  Message: Fatal error in defaults handling. Program aborted!
  **EE_FAILED_TO_HANDLE_DEFAULTS_FILE** was added in 8.0.13.

- Error number: 49; Symbol: **EE_WRONG_DIRECTIVE_IN_CONFIG_FILE**;
  Message: Wrong '!%s' directive in config file %s at line %d.
  **EE_WRONG_DIRECTIVE_IN_CONFIG_FILE** was added in 8.0.13.

- Error number: 50; Symbol: **EE_SKIPPING_DIRECTIVE_DUE_TO_MAX_INCLUDE_RECURSION**;
  Message: Skipping '%s' directive as maximum include recursion level was reached in file %s at line %d.
  **EE_SKIPPING_DIRECTIVE_DUE_TO_MAX_INCLUDE_RECURSION** was added in 8.0.13.

- Error number: 51; Symbol: **EE_INCORRECT_GRP_DEFINITION_IN_CONFIG_FILE**;
  Message: Wrong group definition in config file %s at line %d.
  **EE_INCORRECT_GRP_DEFINITION_IN_CONFIG_FILE** was added in 8.0.13.

- Error number: 52; Symbol: **EE_OPTION_WITHOUT_GRP_IN_CONFIG_FILE**;
  Message: Found option without preceding group in config file %s at line %d.
  **EE_OPTION_WITHOUT_GRP_IN_CONFIG_FILE** was added in 8.0.13.

- Error number: 53; Symbol: **EE_CONFIG_FILE_PERMISSION_ERROR**;
  Message: %s should be readable/writable only by current user.
  **EE_CONFIG_FILE_PERMISSION_ERROR** was added in 8.0.13.

- Error number: 54; Symbol: **EE_IGNORE_WORLD_WRITABLE_CONFIG_FILE**;
  Message: World-writable config file '%s' is ignored.
  **EE_IGNORE_WORLD_WRITABLE_CONFIG_FILE** was added in 8.0.13.

- Error number: 55; Symbol: **EE_USING_DISABLED_OPTION**;
  Message: %s: Option '%s' was used, but is disabled.
Global Error Message Reference

**EE_USING_DISABLED_OPTION** was added in 8.0.13.

- Error number: **56**; Symbol: **EE_USING_DISABLED_SHORT_OPTION**;
  Message: `%s`: Option `-c` was used, but is disabled.
  **EE_USING_DISABLED_SHORT_OPTION** was added in 8.0.13.

- Error number: **57**; Symbol: **EE_USING_PASSWORD_ON_CLI_IS_INSECURE**;
  Message: Using a password on the command line interface can be insecure.
  **EE_USING_PASSWORD_ON_CLI_IS_INSECURE** was added in 8.0.13.

- Error number: **58**; Symbol: **EE_UNKNOWN_SUFFIX_FOR_VARIABLE**;
  Message: Unknown suffix `%c` used for variable `%s` (value `%s`).
  **EE_UNKNOWN_SUFFIX_FOR_VARIABLE** was added in 8.0.13.

- Error number: **59**; Symbol: **EE_SSL_ERROR_FROM_FILE**;
  Message: SSL error: %s from '%s'.
  **EE_SSL_ERROR_FROM_FILE** was added in 8.0.13.

- Error number: **60**; Symbol: **EE_SSL_ERROR**;
  Message: SSL error: %s.
  **EE_SSL_ERROR** was added in 8.0.13.

- Error number: **61**; Symbol: **EE_NET_SEND_ERROR_IN_BOOTSTRAP**;
  Message: %d %s.
  **EE_NET_SEND_ERROR_IN_BOOTSTRAP** was added in 8.0.13.

- Error number: **62**; Symbol: **EE_PACKETS_OUT_OF_ORDER**;
  Message: Packets out of order (found %u, expected %u).
  **EE_PACKETS_OUT_OF_ORDER** was added in 8.0.13.

- Error number: **63**; Symbol: **EE_UNKNOWN_PROTOCOL_OPTION**;
  Message: Unknown option to protocol: %s.
  **EE_UNKNOWN_PROTOCOL_OPTION** was added in 8.0.13.

- Error number: **64**; Symbol: **EE_FAILED_TO_LOCATE_SERVER_PUBLIC_KEY**;
  Message: Failed to locate server public key '%s'.
  **EE_FAILED_TO_LOCATE_SERVER_PUBLIC_KEY** was added in 8.0.13.

- Error number: **65**; Symbol: **EE_PUBLIC_KEY_NOT_IN_PEM_FORMAT**;
  Message: Public key is not in Privacy Enhanced Mail format: '%s'.
  **EE_PUBLIC_KEY_NOT_IN_PEM_FORMAT** was added in 8.0.13.

- Error number: **66**; Symbol: **EE_DEBUG_INFO**;
Message: %s.

```
EE_DEBUG_INFO was added in 8.0.13.
```

- Error number: 67; Symbol: EE_UNKNOWN_VARIABLE;
  
  Message: unknown variable '%s'.
  
  ```
  EE_UNKNOWN_VARIABLE was added in 8.0.13.
  ```

- Error number: 68; Symbol: EE_UNKNOWN_OPTION;
  
  Message: unknown option '-%s'.
  
  ```
  EE_UNKNOWN_OPTION was added in 8.0.13.
  ```

- Error number: 69; Symbol: EE_UNKNOWN_SHORT_OPTION;
  
  Message: %s: unknown option '-%c'.
  
  ```
  EE_UNKNOWN_SHORT_OPTION was added in 8.0.13.
  ```

- Error number: 70; Symbol: EE_OPTIONWITHOUT_ARGUMENT;
  
  Message: %s: option '-%s' cannot take an argument.
  
  ```
  EE_OPTIONWITHOUT_ARGUMENT was added in 8.0.13.
  ```

- Error number: 71; Symbol: EE_OPTIONREQUIRES_ARGUMENT;
  
  Message: %s: option '-%s' requires an argument.
  
  ```
  EE_OPTIONREQUIRES_ARGUMENT was added in 8.0.13.
  ```

- Error number: 72; Symbol: EE_SHORTOPTIONREQUIRES_ARGUMENT;
  
  Message: %s: option '-%c' requires an argument.
  
  ```
  EE_SHORTOPTIONREQUIRES_ARGUMENT was added in 8.0.13.
  ```

- Error number: 73; Symbol: EE_OPTION_IGNORED_DUE_TO_INVALID_VALUE;
  
  Message: %s: ignoring option '-%s' due to invalid value '%s'.
  
  ```
  EE_OPTION_IGNORED_DUE_TO_INVALID_VALUE was added in 8.0.13.
  ```

- Error number: 74; Symbol: EE_OPTIONWITHEMPTY_VALUE;
  
  Message: %s: Empty value for '%s' specified.
  
  ```
  EE_OPTIONWITHEMPTY_VALUE was added in 8.0.13.
  ```

- Error number: 75; Symbol: EE_FAILED_TO_ASSIGN_MAX_VALUE_TO_OPTION;
  
  Message: %s: Maximum value of '%s' cannot be set.
  
  ```
  EE_FAILED_TO_ASSIGN_MAX_VALUE_TO_OPTION was added in 8.0.13.
  ```

- Error number: 76; Symbol: EE_INCORRECT_BOOLEAN_VALUE_FOR_OPTION;
  
  Message: option '%s': boolean value '%s' was not recognized. Set to OFF.
  
  ```
  EE_INCORRECT_BOOLEAN_VALUE_FOR_OPTION was added in 8.0.13.
  ```
• Error number: 77; Symbol: \texttt{EE\_FAILED\_TO\_SET\_OPTION\_VALUE};
  Message: '%%s: Error while setting value '%%s' to '%%s'.
  \texttt{EE\_FAILED\_TO\_SET\_OPTION\_VALUE} was added in 8.0.13.

• Error number: 78; Symbol: \texttt{EE\_INCORRECT\_INT\_VALUE\_FOR\_OPTION};
  Message: Incorrect integer value: '%%s'.
  \texttt{EE\_INCORRECT\_INT\_VALUE\_FOR\_OPTION} was added in 8.0.13.

• Error number: 79; Symbol: \texttt{EE\_INCORRECT\_UINT\_VALUE\_FOR\_OPTION};
  Message: Incorrect unsigned integer value: '%%s'.
  \texttt{EE\_INCORRECT\_UINT\_VALUE\_FOR\_OPTION} was added in 8.0.13.

• Error number: 80; Symbol: \texttt{EE\_ADJUSTED\_SIGNED\_VALUE\_FOR\_OPTION};
  Message: option '%%s': signed value %s adjusted to %s.
  \texttt{EE\_ADJUSTED\_SIGNED\_VALUE\_FOR\_OPTION} was added in 8.0.13.

• Error number: 81; Symbol: \texttt{EE\_ADJUSTED\_UNSIGNED\_VALUE\_FOR\_OPTION};
  Message: option '%%s': unsigned value %s adjusted to %s.
  \texttt{EE\_ADJUSTED\_UNSIGNED\_VALUE\_FOR\_OPTION} was added in 8.0.13.

• Error number: 82; Symbol: \texttt{EE\_ADJUSTED\_ULONGLONG\_VALUE\_FOR\_OPTION};
  Message: option '%%s': value %s adjusted to %s.
  \texttt{EE\_ADJUSTED\_ULONGLONG\_VALUE\_FOR\_OPTION} was added in 8.0.13.

• Error number: 83; Symbol: \texttt{EE\_ADJUSTED\_DOUBLE\_VALUE\_FOR\_OPTION};
  Message: option '%%s': value %g adjusted to %g.
  \texttt{EE\_ADJUSTED\_DOUBLE\_VALUE\_FOR\_OPTION} was added in 8.0.13.

• Error number: 84; Symbol: \texttt{EE\_INVALID\_DECIMAL\_VALUE\_FOR\_OPTION};
  Message: Invalid decimal value for option '%%s'
  \texttt{EE\_INVALID\_DECIMAL\_VALUE\_FOR\_OPTION} was added in 8.0.13.

• Error number: 85; Symbol: \texttt{EE\_COLLATION\_PARSER\_ERROR};
  Message: '%%s.
  \texttt{EE\_COLLATION\_PARSER\_ERROR} was added in 8.0.13.

• Error number: 86; Symbol: \texttt{EE\_FAILED\_TO\_RESET\_BEFORE\_PRIMARY\_IGNORABLE\_CHAR};
  Message: Failed to reset before a primary ignorable character %%s.
  \texttt{EE\_FAILED\_TO\_RESET\_BEFORE\_PRIMARY\_IGNORABLE\_CHAR} was added in 8.0.13.

• Error number: 87; Symbol: \texttt{EE\_FAILED\_TO\_RESET\_BEFORE\_TERTIARY\_IGNORABLE\_CHAR};
  Message: Failed to reset before a tertiary ignorable character %%s.
  \texttt{EE\_FAILED\_TO\_RESET\_BEFORE\_TERTIARY\_IGNORABLE\_CHAR} was added in 8.0.13.
Problems and Common Errors

- Error number: 88; Symbol: EE_SHIFT_CHAR_OUT_OF_RANGE;
  
  Message: Shift character out of range: %s.

  EE_SHIFT_CHAR_OUT_OF_RANGE was added in 8.0.13.

- Error number: 89; Symbol: EE_RESET_CHAR_OUT_OF_RANGE;
  
  Message: Reset character out of range: %s.

  EE_RESET_CHAR_OUT_OF_RANGE was added in 8.0.13.

- Error number: 90; Symbol: EE_UNKNOWN_LDML_TAG;
  
  Message: Unknown LDML tag: ‘%.*s’.

  EE_UNKNOWN_LDML_TAG was added in 8.0.13.

- Error number: 91; Symbol: EE_FAILED_TO_RESET_BEFORE_SECONDARY_IGNORABLE_CHAR;
  
  Message: Failed to reset before a secondary ignorable character %s.

  EE_FAILED_TO_RESET_BEFORE_SECONDARY_IGNORABLE_CHAR was added in 8.0.16.

B.4 Problems and Common Errors

This section lists some common problems and error messages that you may encounter. It describes how to determine the causes of the problems and what to do to solve them.

B.4.1 How to Determine What Is Causing a Problem

When you run into a problem, the first thing you should do is to find out which program or piece of equipment is causing it:

- If you have one of the following symptoms, then it is probably a hardware problems (such as memory, motherboard, CPU, or hard disk) or kernel problem:
  
  - The keyboard does not work. This can normally be checked by pressing the Caps Lock key. If the Caps Lock light does not change, you have to replace your keyboard. (Before doing this, you should try to restart your computer and check all cables to the keyboard.)
  
  - The mouse pointer does not move.
  
  - The machine does not answer to a remote machine’s pings.
  
  - Other programs that are not related to MySQL do not behave correctly.
  
  - Your system restarted unexpectedly. (A faulty user-level program should never be able to take down your system.)

  In this case, you should start by checking all your cables and run some diagnostic tool to check your hardware! You should also check whether there are any patches, updates, or service packs for your operating system that could likely solve your problem. Check also that all your libraries (such as glibc) are up to date.

  It is always good to use a machine with ECC memory to discover memory problems early.

- If your keyboard is locked up, you may be able to recover by logging in to your machine from another machine and executing kbd_mode -a.
• Please examine your system log file (/var/log/messages or similar) for reasons for your problem. If you think the problem is in MySQL, you should also examine MySQL's log files. See Section 5.4, “MySQL Server Logs”.

• If you do not think you have hardware problems, you should try to find out which program is causing problems. Try using top, ps, Task Manager, or some similar program, to check which program is taking all CPU or is locking the machine.

• Use top, df, or a similar program to check whether you are out of memory, disk space, file descriptors, or some other critical resource.

• If the problem is some runaway process, you can always try to kill it. If it does not want to die, there is probably a bug in the operating system.

If you have examined all other possibilities and concluded that the MySQL server or a MySQL client is causing the problem, it is time to create a bug report, see Section 1.7, “How to Report Bugs or Problems”. In the bug report, try to give a complete description of how the system is behaving and what you think is happening. Also state why you think that MySQL is causing the problem. Take into consideration all the situations described in this chapter. State any problems exactly how they appear when you examine your system. Use the “copy and paste” method for any output and error messages from programs and log files.

Try to describe in detail which program is not working and all symptoms you see. We have in the past received many bug reports that state only “the system does not work.” This provides us with no information about what could be the problem.

If a program fails, it is always useful to know the following information:

• Has the program in question made a segmentation fault (did it dump core)?

• Is the program taking up all available CPU time? Check with top. Let the program run for a while, it may simply be evaluating something computationally intensive.

• If the mysql server is causing problems, can you get any response from it with mysqladmin -u root ping or mysqladmin -u root processlist?

• What does a client program say when you try to connect to the MySQL server? (Try with mysql, for example.) Does the client jam? Do you get any output from the program?

When sending a bug report, you should follow the outline described in Section 1.7, “How to Report Bugs or Problems”.

B.4.2 Common Errors When Using MySQL Programs

This section lists some errors that users frequently encounter when running MySQL programs. Although the problems show up when you try to run client programs, the solutions to many of the problems involves changing the configuration of the MySQL server.

B.4.2.1 Access denied

An Access denied error can have many causes. Often the problem is related to the MySQL accounts that the server permits client programs to use when connecting. See Section 6.2, “Access Control and Account Management”, and Section 6.2.21, “Troubleshooting Problems Connecting to MySQL”.

B.4.2.2 Can't connect to [local] MySQL server

A MySQL client on Unix can connect to the mysql server in two different ways: By using a Unix socket file to connect through a file in the file system (default /tmp/mysql.sock), or by using TCP/IP, which connects through a port number. A Unix socket file connection is faster than TCP/IP, but can be
used only when connecting to a server on the same computer. A Unix socket file is used if you do not specify a host name or if you specify the special host name `localhost`.

If the MySQL server is running on Windows, you can connect using TCP/IP. If the server is started with the `named_pipe` system variable enabled, you can also connect with named pipes if you run the client on the host where the server is running. The name of the named pipe is `MySQL` by default. If you do not give a host name when connecting to `mysqld`, a MySQL client first tries to connect to the named pipe. If that does not work, it connects to the TCP/IP port. You can force the use of named pipes on Windows by using `. \ as the host name.

The error (2002) `Can't connect to ...` normally means that there is no MySQL server running on the system or that you are using an incorrect Unix socket file name or TCP/IP port number when trying to connect to the server. You should also check that the TCP/IP port you are using has not been blocked by a firewall or port blocking service.

The error (2003) `Can't connect to MySQL server on 'server' (10061)` indicates that the network connection has been refused. You should check that there is a MySQL server running, that it has network connections enabled, and that the network port you specified is the one configured on the server.

Start by checking whether there is a process named `mysqld` running on your server host. (Use `ps xa | grep mysqld` on Unix or the Task Manager on Windows.) If there is no such process, you should start the server. See Section 2.10.2, “Starting the Server”.

If a `mysqld` process is running, you can check it by trying the following commands. The port number or Unix socket file name might be different in your setup. `host_ip` represents the IP address of the machine where the server is running.

```shell
shell> mysqladmin version
shell> mysqladmin variables
shell> mysqladmin -h `hostname` version variables
shell> mysqladmin -h `hostname` --port=3306 version
shell> mysqladmin -h host_ip version
shell> mysqladmin --protocol=SOCKET --socket=/tmp/mysql.sock version
```

Note the use of backticks rather than forward quotation marks with the `hostname` command; these cause the output of `hostname` (that is, the current host name) to be substituted into the `mysqladmin` command. If you have no `hostname` command or are running on Windows, you can manually type the host name of your machine (without backticks) following the `-h` option. You can also try `-h 127.0.0.1` to connect with TCP/IP to the local host.

Make sure that the server has not been configured to ignore network connections or (if you are attempting to connect remotely) that it has not been configured to listen only locally on its network interfaces. If the server was started with the `skip_networking` system variable enabled, it will not accept TCP/IP connections at all. If the server was started with the `bind_address` system variable set to `127.0.0.1`, it will listen for TCP/IP connections only locally on the loopback interface and will not accept remote connections.

Check to make sure that there is no firewall blocking access to MySQL. Your firewall may be configured on the basis of the application being executed, or the port number used by MySQL for communication (3306 by default). Under Linux or Unix, check your IP tables (or similar) configuration to ensure that the port has not been blocked. Under Windows, applications such as ZoneAlarm or Windows Firewall may need to be configured not to block the MySQL port.

Here are some reasons the `Can't connect to local MySQL server` error might occur:

- `mysqld` is not running on the local host. Check your operating system's process list to ensure the `mysqld` process is present.
- You're running a MySQL server on Windows with many TCP/IP connections to it. If you're experiencing that quite often your clients get that error, you can find a workaround here: Connection to MySQL Server Failing on Windows.
• Someone has removed the Unix socket file that mysqld uses (/tmp/mysql.sock by default). For example, you might have a cron job that removes old files from the /tmp directory. You can always run mysqladmin version to check whether the Unix socket file that mysqladmin is trying to use really exists. The fix in this case is to change the cron job to not remove mysql.sock or to place the socket file somewhere else. See Section B.4.3.6, “How to Protect or Change the MySQL Unix Socket File”.

• You have started the mysqld server with the --socket=/path/to/socket option, but forgotten to tell client programs the new name of the socket file. If you change the socket path name for the server, you must also notify the MySQL clients. You can do this by providing the same --socket option when you run client programs. You also need to ensure that clients have permission to access the mysql.sock file. To find out where the socket file is, you can do:

```
shell> netstat -ln | grep mysql
```

See Section B.4.3.6, “How to Protect or Change the MySQL Unix Socket File”.

• You are using Linux and one server thread has died (dumped core). In this case, you must kill the other mysqld threads (for example, with kill) before you can restart the MySQL server. See Section B.4.3.3, “What to Do If MySQL Keeps Crashing”.

• The server or client program might not have the proper access privileges for the directory that holds the Unix socket file or the socket file itself. In this case, you must either change the access privileges for the directory or socket file so that the server and clients can access them, or restart mysqld with a --socket option that specifies a socket file name in a directory where the server can create it and where client programs can access it.

If you get the error message Can't connect to MySQL server on some_host, you can try the following things to find out what the problem is:

• Check whether the server is running on that host by executing telnet some_host 3306 and pressing the Enter key a couple of times. (3306 is the default MySQL port number. Change the value if your server is listening to a different port.) If there is a MySQL server running and listening to the port, you should get a response that includes the server's version number. If you get an error such as telnet: Unable to connect to remote host: Connection refused, then there is no server running on the given port.

• If the server is running on the local host, try using mysqladmin -h localhost variables to connect using the Unix socket file. Verify the TCP/IP port number that the server is configured to listen to (it is the value of the port variable.)

• If you are running under Linux and Security-Enhanced Linux (SELinux) is enabled, see Set SELinux context for MySQL Server.

### Set SELinux context for MySQL Server

The MySQL server reads from and writes to many files, and if the SELinux context is not set correctly on these files then the mysqld process may block access to MySQL files. In some cases, this may stop mysqld from logging errors.

#### Required Tools

The semanage binary is used in this guide to manage context; on Enterprise Linux it's part of the policycoreutils-python package:

```
shell> yum install policycoreutils-python
```

**Note**

RHEL 6 with Python 2.6: to use semanage with early versions of RHEL 6 with python 2.6, you may need to install a backport of the OrderedDict python collection module using python-pip from the EPEL repository.
Common Errors When Using MySQL Programs

**List Current MySQL Context**

List them using the following:

```
shell> semanage fcontext -l | grep -i mysql
```

**Set MySQL Data Directory Context**

The default data directory location is `/var/lib/mysql/` and the SELinux context used is `mysqld_db_t`.

If you edit the configuration file to use a different location for the data directory, or for any of the files normally in the data directory (such as the binary logs) you may need to set the context for the new location. For example:

```
shell> semanage fcontext -a -t mysqld_db_t "/path/to/my/custom/datadir(/.*)?"
shell> restorecon -Rv /path/to/my/custom/datadir
```

**Set MySQL Error Log File Context**

The default location for RedHat RPMs is `/var/log/mysqld.log`; and the SELinux context used is `mysqld_log_t`.

If you edit the configuration file to use a different location then you may need to set the context for the new location. For example:

```
shell> semanage fcontext -a -t mysqld_log_t "/path/to/my/custom/error.log"
shell> restorecon -Rv /path/to/my/custom/error.log
```

**Set PID File Context**

The default location for the PID file is `/var/run/mysqld/mysqld.pid`; and the SELinux context used is `mysqld_var_run_t`.

If you edit the configuration file to use a different location then you may need to set the context for the new location. For example:

```
shell> semanage fcontext -a -t mysqld_var_run_t "/path/to/my/custom/pidfile/directory/.*?"
shell> restorecon -Rv /path/to/my/custom/pidfile/directory
```

**Set unix-domain Socket Context**

The default location for the unix-domain socket is `/var/lib/mysql/mysql.sock`; and the SELinux context used is `mysqld_var_run_t`.

If you edit the configuration file to use a different location then you may need to set the context for the new location. For example:

```
shell> semanage fcontext -a -t mysqld_var_run_t "/path/to/my/custom/mysql\socks"  
shell> restorecon -Rv /path/to/my/custom/mysql.sock
```

**Set TCP Port Context**

The default TCP port is 3306; and the SELinux context used is `mysqld_port_t`.

If you edit the configuration file to use a different TCP port, or you enable Group Replication which uses an additional port (typically port 13306), you may need to set the context for the new port. For example:

```
shell> semanage port -a -t mysqld_port_t -p tcp 13306
shell> restorecon
```
Set secure_file_priv Directory Context

For MySQL versions since 5.5.53, 5.6.34, 5.7.16, and 8.0.11.

Installing the MySQL server RPM creates a /var/lib/mysql-files/ directory, but does not set the SELinux context on this directory. This directory is intended to be used for operations such as SELECT ... INTO OUTFILE.

If you enabled the use of this directory by setting secure_file_priv, you may need to set the context like so:

```
shell> semanage fcontext -a -t mysqld_db_t "/var/lib/mysql-files/(.*)?"
shell> restorecon -Rv /var/lib/mysql-files
```

Edit this path if you used a different location. For security purposes, this directory should never be within the data directory.

For more information about this variable, see the secure_file_priv documentation.

Connection to MySQL Server Failing on Windows

When you're running a MySQL server on Windows with many TCP/IP connections to it, and you're experiencing that quite often your clients get a Can't connect to MySQL server error, the reason might be that Windows does not allow for enough ephemeral (short-lived) ports to serve those connections.

The purpose of TIME_WAIT is to keep a connection accepting packets even after the connection has been closed. This is because Internet routing can cause a packet to take a slow route to its destination and it may arrive after both sides have agreed to close. If the port is in use for a new connection, that packet from the old connection could break the protocol or compromise personal information from the original connection. The TIME_WAIT delay prevents this by ensuring that the port cannot be reused until after some time has been permitted for those delayed packets to arrive.

It is safe to reduce TIME_WAIT greatly on LAN connections because there is little chance of packets arriving at very long delays, as they could through the Internet with its comparatively large distances and latencies.

Windows permits ephemeral (short-lived) TCP ports to the user. After any port is closed it will remain in a TIME_WAIT status for 120 seconds. The port will not be available again until this time expires. The default range of port numbers depends on the version of Windows, with a more limited number of ports in older versions:

- Windows through Server 2003: Ports in range 1025–5000

With a small stack of available TCP ports (5000) and a high number of TCP ports being open and closed over a short period of time along with the TIME_WAIT status you have a good chance for running out of ports. There are two ways to address this problem:

- Reduce the number of TCP ports consumed quickly by investigating connection pooling or persistent connections where possible
- Tune some settings in the Windows registry (see below)

Important

The following procedure involves modifying the Windows registry. Before you modify the registry, make sure to back it up and make sure that you understand how to restore it if a problem occurs. For information about how to back up, restore, and edit the registry, view the following article in the Microsoft Knowledge Base: http://support.microsoft.com/kb/256986/EN-US/.
Common Errors When Using MySQL Programs

1. Start Registry Editor (Regedit32.exe).

2. Locate the following key in the registry:

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters
```

3. On the Edit menu, click Add Value, and then add the following registry value:

```
Value Name: MaxUserPort
Data Type: REG_DWORD
Value: 65534
```

This sets the number of ephemeral ports available to any user. The valid range is between 5000 and 65534 (decimal). The default value is 0x1388 (5000 decimal).

4. On the Edit menu, click Add Value, and then add the following registry value:

```
Value Name: TcpTimedWaitDelay
Data Type: REG_DWORD
Value: 30
```

This sets the number of seconds to hold a TCP port connection in TIME_WAIT state before closing. The valid range is between 30 and 300 decimal, although you may wish to check with Microsoft for the latest permitted values. The default value is 0x78 (120 decimal).

5. Quit Registry Editor.

6. Reboot the machine.

Note: Undoing the above should be as simple as deleting the registry entries you've created.

B.4.2.3 Lost connection to MySQL server

There are three likely causes for this error message.

Usually it indicates network connectivity trouble and you should check the condition of your network if this error occurs frequently. If the error message includes “during query,” this is probably the case you are experiencing.

Sometimes the “during query” form happens when millions of rows are being sent as part of one or more queries. If you know that this is happening, you should try increasing net_read_timeout from its default of 30 seconds to 60 seconds or longer, sufficient for the data transfer to complete.

More rarely, it can happen when the client is attempting the initial connection to the server. In this case, if your connect_timeout value is set to only a few seconds, you may be able to resolve the problem by increasing it to ten seconds, perhaps more if you have a very long distance or slow connection.

You can determine whether you are experiencing this more uncommon cause by using SHOW GLOBAL STATUS LIKE 'Aborted_connects'. It will increase by one for each initial connection attempt that the server aborts. You may see “reading authorization packet” as part of the error message; if so, that also suggests that this is the solution that you need.

If the cause is none of those just described, you may be experiencing a problem with BLOB values that are larger than max_allowed_packet, which can cause this error with some clients. Sometime you may see an ER_NET_PACKET_TOO_LARGE error, and that confirms that you need to increase max_allowed_packet.

B.4.2.4 Password Fails When Entered Interactively

MySQL client programs prompt for a password when invoked with a --password or -p option that has no following password value:

```
shell> mysql -u user_name -p
Enter password:
```

5304
On some systems, you may find that your password works when specified in an option file or on the command line, but not when you enter it interactively at the Enter password: prompt. This occurs when the library provided by the system to read passwords limits password values to a small number of characters (typically eight). That is a problem with the system library, not with MySQL. To work around it, change your MySQL password to a value that is eight or fewer characters long, or put your password in an option file.

B.4.2.5 Host 'host_name' is blocked

If the following error occurs, it means that mysqld has received many connection requests from the given host that were interrupted in the middle:

Host 'host_name' is blocked because of many connection errors.
Unblock with 'mysqladmin flush-hosts'

The value of the max_connect_errors system variable determines how many successive interrupted connection requests are permitted. After max_connect_errors failed requests without a successful connection, mysqld assumes that something is wrong (for example, that someone is trying to break in), and blocks the host from further connections until you flush the host cache by executing a FLUSH HOSTS statement, a TRUNCATE TABLE statement that truncates the Performance Schema host_cache table, or a mysqladmin flush-hosts command.

To adjust the permitted number of successive connection errors, set max_connect_errors at server startup. For example, put these lines in the server my.cnf file:

```
[mysqld]
max_connect_errors=10000
```

The value can also be set at runtime:

```sql
SET GLOBAL max_connect_errors=10000;
```

If you get the Host 'host_name' is blocked error message for a given host, you should first verify that there is nothing wrong with TCP/IP connections from that host. If you are having network problems, it does no good to increase the value of max_connect_errors.

For more information about how the host cache works, see Section 8.12.4.2, “DNS Lookup Optimization and the Host Cache”.

B.4.2.6 Too many connections

If clients encounter Too many connections errors when attempting to connect to the mysqld server, all available connections are in use by other clients.

The permitted number of connections is controlled by the max_connections system variable. The default value is 151 to improve performance when MySQL is used with the Apache Web server. To support more connections, set max_connections to a larger value.

mysqld actually permits max_connections + 1 client connections. The extra connection is reserved for use by accounts that have the CONNECTION_ADMIN or SUPER privilege. By granting the privilege to administrators and not to normal users (who should not need it), an administrator can connect to the server and use SHOW PROCESSLIST to diagnose problems even if the maximum number of unprivileged clients are connected. See Section 13.7.7.29, "SHOW PROCESSLIST Statement".

The server also permits administrative connections on a dedicated interface. For more information about how the server handles client connections, see Section 8.12.4.1, “How MySQL Handles Client Connections”.

B.4.2.7 Out of memory

If you issue a query using the mysql client program and receive an error like the following one, it means that mysql does not have enough memory to store the entire query result:
Common Errors When Using MySQL Programs

mysql: Out of memory at line 42, 'malloc.c'
mysql: needed 8136 byte (8k), memory in use: 12481367 bytes (12189k)
ERROR 2008: MySQL client ran out of memory

To remedy the problem, first check whether your query is correct. Is it reasonable that it should return so many rows? If not, correct the query and try again. Otherwise, you can invoke \texttt{mysql} with the \texttt{--quick} option. This causes it to use the \texttt{mysql_use_result()} C API function to retrieve the result set, which places less of a load on the client (but more on the server).

\textbf{B.4.2.8 MySQL server has gone away}

This section also covers the related \textit{Lost connection to server during query} error.

The most common reason for the \textit{MySQL server has gone away} error is that the server timed out and closed the connection. In this case, you normally get one of the following error codes (which one you get is operating system-dependent).

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CR_SERVER_GONE_ERROR</td>
<td>The client couldn't send a question to the server.</td>
</tr>
<tr>
<td>CR_SERVER_LOST</td>
<td>The client didn't get an error when writing to the server, but it didn't get a full answer (or any answer) to the question.</td>
</tr>
</tbody>
</table>

By default, the server closes the connection after eight hours if nothing has happened. You can change the time limit by setting the \texttt{wait_timeout} variable when you start \texttt{mysqld}. See Section 5.1.8, “Server System Variables”.

If you have a script, you just have to issue the query again for the client to do an automatic reconnection. This assumes that you have automatic reconnection in the client enabled (which is the default for the \texttt{mysql} command-line client).

Some other common reasons for the \textit{MySQL server has gone away} error are:

- You (or the db administrator) has killed the running thread with a \texttt{KILL} statement or a \texttt{mysqladmin kill} command.
- You tried to run a query after closing the connection to the server. This indicates a logic error in the application that should be corrected.
- A client application running on a different host does not have the necessary privileges to connect to the MySQL server from that host.
- You got a timeout from the TCP/IP connection on the client side. This may happen if you have been using the commands: \texttt{mysql_options(..., MYSQL_OPT_READ_TIMEOUT,...)} or \texttt{mysql_options(..., MYSQL_OPT_WRITE_TIMEOUT,...)}. In this case increasing the timeout may help solve the problem.
- You have encountered a timeout on the server side and the automatic reconnection in the client is disabled (the \texttt{reconnect} flag in the \texttt{MYSQL} structure is equal to 0).
- You are using a Windows client and the server had dropped the connection (probably because \texttt{wait_timeout} expired) before the command was issued.

The problem on Windows is that in some cases MySQL does not get an error from the OS when writing to the TCP/IP connection to the server, but instead gets the error when trying to read the answer from the connection.

The solution to this is to either do a \texttt{mysql_ping()} on the connection if there has been a long time since the last query (this is what Connector/ODBC does) or set \texttt{wait_timeout} on the \texttt{mysqld} server so high that it in practice never times out.

- You can also get these errors if you send a query to the server that is incorrect or too large. If \texttt{mysqld} receives a packet that is too large or out of order, it assumes that something has gone
Common Errors When Using MySQL Programs

wrong with the client and closes the connection. If you need big queries (for example, if you are working with big BLOB columns), you can increase the query limit by setting the server's max_allowed_packet variable, which has a default value of 64MB. You may also need to increase the maximum packet size on the client end. More information on setting the packet size is given in Section B.4.2.9, "Packet Too Large".

An INSERT or REPLACE statement that inserts a great many rows can also cause these sorts of errors. Either one of these statements sends a single request to the server irrespective of the number of rows to be inserted; thus, you can often avoid the error by reducing the number of rows sent per INSERT or REPLACE.

• It is also possible to see this error if host name lookups fail (for example, if the DNS server on which your server or network relies goes down). This is because MySQL is dependent on the host system for name resolution, but has no way of knowing whether it is working—from MySQL's point of view the problem is indistinguishable from any other network timeout.

You may also see the MySQL server has gone away error if MySQL is started with the skip_networking system variable enabled.

Another networking issue that can cause this error occurs if the MySQL port (default 3306) is blocked by your firewall, thus preventing any connections at all to the MySQL server.

• You can also encounter this error with applications that fork child processes, all of which try to use the same connection to the MySQL server. This can be avoided by using a separate connection for each child process.

• You have encountered a bug where the server died while executing the query.

You can check whether the MySQL server died and restarted by executing mysqladmin version and examining the server's uptime. If the client connection was broken because mysqld crashed and restarted, you should concentrate on finding the reason for the crash. Start by checking whether issuing the query again kills the server again. See Section B.4.3.3, "What to Do If MySQL Keeps Crashing".

You can obtain more information about lost connections by starting mysqld with the log_error_verbosity system variable set to 3. This logs some of the disconnection messages in the hostname.err file. See Section 5.4.2, "The Error Log".

If you want to create a bug report regarding this problem, be sure that you include the following information:

• Indicate whether the MySQL server died. You can find information about this in the server error log. See Section B.4.3.3, "What to Do If MySQL Keeps Crashing".

• If a specific query kills mysqld and the tables involved were checked with CHECK TABLE before you ran the query, can you provide a reproducible test case? See Section 29.5, "Debugging and Porting MySQL".

• What is the value of the wait_timeout system variable in the MySQL server? (mysqladmin variables gives you the value of this variable.)

• Have you tried to run mysqld with the general query log enabled to determine whether the problem query appears in the log? (See Section 5.4.3, "The General Query Log".)

See also Section B.4.2.10, "Communication Errors and Aborted Connections", and Section 1.7, "How to Report Bugs or Problems".

B.4.2.9 Packet Too Large

A communication packet is a single SQL statement sent to the MySQL server, a single row that is sent to the client, or a binary log event sent from a master replication server to a slave.
The largest possible packet that can be transmitted to or from a MySQL 8.0 server or client is 1GB.

When a MySQL client or the mysqld server receives a packet bigger than max_allowed_packet bytes, it issues an ER_NET_PACKET_TOO_LARGE error and closes the connection. With some clients, you may also get a Lost connection to MySQL server during query error if the communication packet is too large.

Both the client and the server have their own max_allowed_packet variable, so if you want to handle big packets, you must increase this variable both in the client and in the server.

If you are using the mysql client program, its default max_allowed_packet variable is 16MB. To set a larger value, start mysql like this:

```
shell> mysql --max_allowed_packet=32M
```

That sets the packet size to 32MB.

The server's default max_allowed_packet value is 64MB. You can increase this if the server needs to handle big queries (for example, if you are working with big BLOB columns). For example, to set the variable to 128MB, start the server like this:

```
shell> mysqld --max_allowed_packet=128M
```

You can also use an option file to set max_allowed_packet. For example, to set the size for the server to 128MB, add the following lines in an option file:

```
[mysqld]
max_allowed_packet=128M
```

It is safe to increase the value of this variable because the extra memory is allocated only when needed. For example, mysqld allocates more memory only when you issue a long query or when mysqld must return a large result row. The small default value of the variable is a precaution to catch incorrect packets between the client and server and also to ensure that you do not run out of memory by using large packets accidentally.

You can also get strange problems with large packets if you are using large BLOB values but have not given mysqld access to enough memory to handle the query. If you suspect this is the case, try adding ulimit -d 256000 to the beginning of the mysqld_safe script and restarting mysqld.

### B.4.2.10 Communication Errors and Aborted Connections

If connection problems occur such as communication errors or aborted connections, use these sources of information to diagnose problems:

- The error log. See Section 5.4.2, “The Error Log”.
- The general query log. See Section 5.4.3, “The General Query Log”.
- The Aborted_xxx and Connection_errors_xxx status variables. See Section 5.1.10, “Server Status Variables”.
- The host cache, which is accessible using the Performance Schema host_cache table. See Section 8.12.4.2, “DNS Lookup Optimization and the Host Cache”, and Section 26.12.18.1, “The host_cache Table”.

If the log_error_verbosity system variable is set to 3, you might find messages like this in your error log:

```
[Note] Aborted connection 854 to db: 'employees' user: 'josh'
```

If a client is unable even to connect, the server increments the Aborted_connects status variable. Unsuccessful connection attempts can occur for the following reasons:
Common Errors When Using MySQL Programs

- A client attempts to access a database but has no privileges for it.
- A client uses an incorrect password.
- A connection packet does not contain the right information.
- It takes more than `connect_timeout` seconds to obtain a connect packet. See Section 5.1.8, “Server System Variables”.

If these kinds of things happen, it might indicate that someone is trying to break into your server! If the general query log is enabled, messages for these types of problems are logged to it.

If a client successfully connects but later disconnects improperly or is terminated, the server increments the `Aborted_clients` status variable, and logs an `Aborted connection` message to the error log. The cause can be any of the following:

- The client program did not call `mysql_close()` before exiting.
- The client had been sleeping more than `wait_timeout` or `interactive_timeout` seconds without issuing any requests to the server. See Section 5.1.8, “Server System Variables”.
- The client program ended abruptly in the middle of a data transfer.

Other reasons for problems with aborted connections or aborted clients:

- The `max_allowed_packet` variable value is too small or queries require more memory than you have allocated for `mysqld`. See Section B.4.2.9, “Packet Too Large”.
- Use of Ethernet protocol with Linux, both half and full duplex. Some Linux Ethernet drivers have this bug. You should test for this bug by transferring a huge file using FTP between the client and server machines. If a transfer goes in burst-pause-burst-pause mode, you are experiencing a Linux duplex syndrome. Switch the duplex mode for both your network card and hub/switch to either full duplex or to half duplex and test the results to determine the best setting.
- A problem with the thread library that causes interrupts on reads.
- Badly configured TCP/IP.
- Faulty Ethernets, hubs, switches, cables, and so forth. This can be diagnosed properly only by replacing hardware.

See also Section B.4.2.8, “MySQL server has gone away”.

### B.4.2.11 The table is full

If a table-full error occurs, it may be that the disk is full or that the table has reached its maximum size. The effective maximum table size for MySQL databases is usually determined by operating system constraints on file sizes, not by MySQL internal limits. See Section 8.4.6, “Limits on Table Size”.

### B.4.2.12 Can’t create/write to file

If you get an error of the following type for some queries, it means that MySQL cannot create a temporary file for the result set in the temporary directory:

```
Can't create/write to file '\sqla3fe_0.ism'.
```

The preceding error is a typical message for Windows; the Unix message is similar.

One fix is to start `mysqld` with the `--tmpdir` option or to add the option to the `[mysqld]` section of your option file. For example, to specify a directory of `C:\temp`, use these lines:

```
[mysqld]
```
The `C:\temp` directory must exist and have sufficient space for the MySQL server to write to. See Section 4.2.2.2, “Using Option Files”.

Another cause of this error can be permissions issues. Make sure that the MySQL server can write to the `tmpdir` directory.

Check also the error code that you get with `perror`. One reason the server cannot write to a table is that the file system is full:

```
shell> perror 28
OS error code  28:  No space left on device
```

If you get an error of the following type during startup, it indicates that the file system or directory used for storing data files is write protected. Provided that the write error is to a test file, the error is not serious and can be safely ignored.

```
Can't create test file /usr/local/mysql/data/master.lower-test
```

**B.4.2.13 Commands out of sync**

If you get *Commands out of sync; you can't run this command now* in your client code, you are calling client functions in the wrong order.

This can happen, for example, if you are using `mysql_use_result()` and try to execute a new query before you have called `mysql_free_result()`. It can also happen if you try to execute two queries that return data without calling `mysql_use_result()` or `mysql_store_result()` in between.

**B.4.2.14 Ignoring user**

If you get the following error, it means that when `mysqld` was started or when it reloaded the grant tables, it found an account in the `user` table that had an invalid password.

```
Found wrong password for user 'some_user'@'some_host'; ignoring user
```

As a result, the account is simply ignored by the permission system. To fix this problem, assign a new, valid password to the account.

**B.4.2.15 Table 'tbl_name' doesn't exist**

If you get either of the following errors, it usually means that no table exists in the default database with the given name:

```
Table 'tbl_name' doesn't exist
Can't find file: 'tbl_name' (errno: 2)
```

In some cases, it may be that the table does exist but that you are referring to it incorrectly:

- Because MySQL uses directories and files to store databases and tables, database and table names are case sensitive if they are located on a file system that has case-sensitive file names.
- Even for file systems that are not case-sensitive, such as on Windows, all references to a given table within a query must use the same lettercase.

You can check which tables are in the default database with `SHOW TABLES`. See Section 13.7.7, “SHOW Statements”.

**B.4.2.16 Can't initialize character set**

You might see an error like this if you have character set problems:
MySQL Connection Failed: Can't initialize character set \textit{charset_name}

This error can have any of the following causes:

- The character set is a multibyte character set and you have no support for the character set in the client. In this case, you need to recompile the client by running \texttt{CMake} with the \texttt{-DDEFAULT_CHARSET=charset_name} option. See Section 2.9.7, “MySQL Source-Configuration Options”.

All standard MySQL binaries are compiled with support for all multibyte character sets.

- The character set is a simple character set that is not compiled into \texttt{mysqld}, and the character set definition files are not in the place where the client expects to find them.

In this case, you need to use one of the following methods to solve the problem:

- Recompile the client with support for the character set. See Section 2.9.7, “MySQL Source-Configuration Options”.

- Specify to the client the directory where the character set definition files are located. For many clients, you can do this with the \texttt{--character-sets-dir} option.

- Copy the character definition files to the path where the client expects them to be.

\subsection*{B.4.2.17 File Not Found and Similar Errors}

If you get \texttt{ERROR 'file_name' not found (errno: 23)}, \texttt{Can't open file: file_name (errno: 24)}, or any other error with \texttt{errno 23} or \texttt{errno 24} from MySQL, it means that you have not allocated enough file descriptors for the MySQL server. You can use the \texttt{perror} utility to get a description of what the error number means:

\begin{verbatim}
shell> perror 23
OS error code  23:  File table overflow
shell> perror 24
OS error code  24:  Too many open files
shell> perror 11
OS error code  11:  Resource temporarily unavailable
\end{verbatim}

The problem here is that \texttt{mysqld} is trying to keep open too many files simultaneously. You can either tell \texttt{mysqld} not to open so many files at once or increase the number of file descriptors available to \texttt{mysqld}.

To tell \texttt{mysqld} to keep open fewer files at a time, you can make the table cache smaller by reducing the value of the \texttt{table_open_cache} system variable (the default value is 64). This may not entirely prevent running out of file descriptors because in some circumstances the server may attempt to extend the cache size temporarily, as described in Section 8.4.3.1, “How MySQL Opens and Closes Tables”. Reducing the value of \texttt{max_connections} also reduces the number of open files (the default value is 100).

To change the number of file descriptors available to \texttt{mysqld}, you can use the \texttt{--open-files-limit} option to \texttt{mysqld_safe} or set the \texttt{open_files_limit} system variable. See Section 5.1.8, “Server System Variables”. The easiest way to set these values is to add an option to your option file. See Section 4.2.2.2, “Using Option Files”. If you have an old version of \texttt{mysqld} that does not support setting the open files limit, you can edit the \texttt{mysqld_safe} script. There is a commented-out line \texttt{ulimit -n 256} in the script. You can remove the \texttt{#} character to uncomment this line, and change the number 256 to set the number of file descriptors to be made available to \texttt{mysqld}.

\texttt{--open-files-limit} and \texttt{ulimit} can increase the number of file descriptors, but only up to the limit imposed by the operating system. There is also a “hard” limit that can be overridden only if you start \texttt{mysqld_safe} or \texttt{mysqld} as \texttt{root} (just remember that you also need to start the server with the \texttt{--user} option in this case so that it does not continue to run as \texttt{root} after it starts up). If you need to...
increase the operating system limit on the number of file descriptors available to each process, consult the documentation for your system.

Note
If you run the tcsh shell, ulimit does not work! tcsh also reports incorrect values when you ask for the current limits. In this case, you should start mysqld_safe using sh.

B.4.2.18 Table-Corruption Issues

If you have started mysqld with the myisam_recover_options system variable set, MySQL automatically checks and tries to repair MyISAM tables if they are marked as 'not closed properly' or 'crashed'. If this happens, MySQL writes an entry in the hostname.err file ‘Warning: Checking table ...’ which is followed by Warning: Repairing table if the table needs to be repaired. If you get a lot of these errors, without mysqld having died unexpectedly just before, then something is wrong and needs to be investigated further.

When the server detects MyISAM table corruption, it writes additional information to the error log, such as the name and line number of the source file, and the list of threads accessing the table. Example: Got an error from thread_id=1, mi_dynrec.c:368. This is useful information to include in bug reports.

See also Section 5.1.7, “Server Command Options”, and Section 29.5.1.7, “Making a Test Case If You Experience Table Corruption”.

B.4.3 Administration-Related Issues

B.4.3.1 Problems with File Permissions

If you have problems with file permissions, the UMASK or UMASK_DIR environment variable might be set incorrectly when mysqld starts. For example, mysqld might issue the following error message when you create a table:

ERROR: Can't find file: 'path/with/file_name' (Errcode: 13)

The default UMASK and UMASK_DIR values are 0640 and 0750, respectively. mysqld assumes that the value for UMASK or UMASK_DIR is in octal if it starts with a zero. For example, setting UMASK=0600 is equivalent to UMASK=384 because 0600 octal is 384 decimal.

Assuming that you start mysqld using mysqld_safe, change the default UMASK value as follows:

UMASK=384 # = 600 in octal
export UMASK
mysqld_safe &

Note
An exception applies for the error log file if you start mysqld using mysqld_safe, which does not respect UMASK: mysqld_safe may create the error log file if it does not exist prior to starting mysqld, and mysqld_safe uses a umask set to a strict value of 0137. If this is unsuitable, create the error file manually with the desired access mode prior to executing mysqld_safe.

By default, mysqld creates database directories with an access permission value of 0750. To modify this behavior, set the UMASK_DIR variable. If you set its value, new directories are created with the combined UMASK and UMASK_DIR values. For example, to give group access to all new directories, start mysqld_safe as follows:

UMASK_DIR=504 # = 770 in octal
For additional details, see Section 4.9, “Environment Variables”.

**B.4.3.2 How to Reset the Root Password**

If you have never assigned a root password for MySQL, the server does not require a password at all for connecting as root. However, this is insecure. For instructions on assigning a password, see Section 2.10.4, “Securing the Initial MySQL Account”.

If you know the root password and want to change it, see Section 13.7.1.1, “ALTER USER Statement”, and Section 13.7.1.10, “SET PASSWORD Statement”.

If you assigned a root password previously but have forgotten it, you can assign a new password. The following sections provide instructions for Windows and Unix and Unix-like systems, as well as generic instructions that apply to any system.

**Resetting the Root Password: Windows Systems**

On Windows, use the following procedure to reset the password for the MySQL 'root'@'localhost' account. To change the password for a root account with a different host name part, modify the instructions to use that host name.

1. Log on to your system as Administrator.

2. Stop the MySQL server if it is running. For a server that is running as a Windows service, go to the Services manager: From the Start menu, select Control Panel, then Administrative Tools, then Services. Find the MySQL service in the list and stop it.

   If your server is not running as a service, you may need to use the Task Manager to force it to stop.

3. Create a text file containing the password-assignment statement on a single line. Replace the password with the password that you want to use.

   ```sql
   ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';
   ```

4. Save the file. This example assumes that you name the file C:\mysql-init.txt.

5. Open a console window to get to the command prompt: From the Start menu, select Run, then enter cmd as the command to be run.

6. Start the MySQL server with the init_file system variable set to name the file (notice that the backslash in the option value is doubled):

   ```cmd
   C:\> cd "C:\Program Files\MySQL\MySQL Server 8.0\bin"
   C:\> mysqld --init-file=C:\mysql-init.txt
   ```

   If you installed MySQL to a different location, adjust the cd command accordingly.

   The server executes the contents of the file named by the init_file system variable at startup, changing the 'root'@'localhost' account password.

   To have server output to appear in the console window rather than in a log file, add the --console option to the mysqld command.

   If you installed MySQL using the MySQL Installation Wizard, you may need to specify a --defaults-file option. For example:

   ```cmd
   C:\> mysqld
   --defaults-file="C:\\ProgramData\\MySQL\\MySQL Server 8.0\\my.ini"
   --init-file=C:\mysql-init.txt
   ```
The appropriate `--defaults-file` setting can be found using the Services Manager: From the Start menu, select Control Panel, then Administrative Tools, then Services. Find the MySQL service in the list, right-click it, and choose the Properties option. The Path to executable field contains the `--defaults-file` setting.

7. After the server has started successfully, delete `C:\mysql-init.txt`.

You should now be able to connect to the MySQL server as root using the new password. Stop the MySQL server and restart it normally. If you run the server as a service, start it from the Windows Services window. If you start the server manually, use whatever command you normally use.

**Resetting the Root Password: Unix and Unix-Like Systems**

On Unix, use the following procedure to reset the password for the MySQL `root'@'localhost'` account. To change the password for a root account with a different host name part, modify the instructions to use that host name.

The instructions assume that you will start the MySQL server from the Unix login account that you normally use for running it. For example, if you run the server using the mysql login account, you should log in as mysql before using the instructions. Alternatively, you can log in as root, but in this case you must start mysqld with the `--user=mysql` option. If you start the server as root without using `--user=mysql`, the server may create root-owned files in the data directory, such as log files, and these may cause permission-related problems for future server startups. If that happens, you will need to either change the ownership of the files to mysql or remove them.

1. Log on to your system as the Unix user that the MySQL server runs as (for example, mysql).

2. Stop the MySQL server if it is running. Locate the `.pid` file that contains the server's process ID. The exact location and name of this file depend on your distribution, host name, and configuration. Common locations are `/var/lib/mysql/`, `/var/run/mysqld/`, and `/usr/local/mysql/data/`. Generally, the file name has an extension of `.pid` and begins with either `mysqld` or your system's host name.

Stop the MySQL server by sending a normal `kill` (not `kill -9`) to the `mysqld` process. Use the actual path name of the `.pid` file in the following command:

```
shell> kill `cat /mysql-data-directory/host_name.pid`
```

Use backticks (not forward quotation marks) with the `cat` command. These cause the output of `cat` to be substituted into the `kill` command.

3. Create a text file containing the password-assignment statement on a single line. Replace the password with the password that you want to use.

   `ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';`

4. Save the file. This example assumes that you name the file `/home/me/mysql-init`. The file contains the password, so do not save it where it can be read by other users. If you are not logged in as `mysql` (the user the server runs as), make sure that the file has permissions that permit `mysql` to read it.

5. Start the MySQL server with the `init_file` system variable set to name the file:

   `shell> mysqld --init-file=/home/me/mysql-init`

   The server executes the contents of the file named by the `init_file` system variable at startup, changing the `root'@'localhost'` account password.

   Other options may be necessary as well, depending on how you normally start your server. For example, `--defaults-file` may be needed before the `init_file` argument.

6. After the server has started successfully, delete `/home/me/mysql-init`. 

7. After the server has started successfully, delete `C:\mysql-init.txt`.

You should now be able to connect to the MySQL server as root using the new password. Stop the MySQL server and restart it normally. If you run the server as a service, start it from the Windows Services window. If you start the server manually, use whatever command you normally use.
You should now be able to connect to the MySQL server as root using the new password. Stop the server and restart it normally.

**Resetting the Root Password: Generic Instructions**

The preceding sections provide password-resetting instructions specifically for Windows and Unix and Unix-like systems. Alternatively, on any platform, you can reset the password using the mysql client (but this approach is less secure):

1. Stop the MySQL server if necessary, then restart it with the --skip-grant-tables option. This enables anyone to connect without a password and with all privileges, and disables account-management statements such as ALTER USER and SET PASSWORD. Because this is insecure, if the server is started with the --skip-grant-tables option, it also disables remote connections by enabling skip_networking.

2. Connect to the MySQL server using the mysql client; no password is necessary because the server was started with --skip-grant-tables:

   ```shell
   mysql
   ```

3. In the mysql client, tell the server to reload the grant tables so that account-management statements work:

   ```mysql
   FLUSH PRIVILEGES;
   ```

   Then change the 'root'@'localhost' account password. Replace the password with the password that you want to use. To change the password for a root account with a different host name part, modify the instructions to use that host name.

   ```mysql
   ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';
   ```

You should now be able to connect to the MySQL server as root using the new password. Stop the server and restart it normally (without the --skip-grant-tables option and without enabling the skip_networking system variable).

**B.4.3.3 What to Do If MySQL Keeps Crashing**

Each MySQL version is tested on many platforms before it is released. This does not mean that there are no bugs in MySQL, but if there are bugs, they should be very few and can be hard to find. If you have a problem, it always helps if you try to find out exactly what crashes your system, because you have a much better chance of getting the problem fixed quickly.

First, you should try to find out whether the problem is that the mysqld server dies or whether your problem has to do with your client. You can check how long your mysqld server has been up by executing mysqladmin version. If mysqld has died and restarted, you may find the reason by looking in the server’s error log. See Section 5.4.2, “The Error Log”.

On some systems, you can find in the error log a stack trace of where mysqld died. Note that the variable values written in the error log may not always be 100% correct.

Many server crashes are caused by corrupted data files or index files. MySQL updates the files on disk with the write() system call after every SQL statement and before the client is notified about the result. (This is not true if you are running with the delay_key_write system variable enabled, in which case data files are written but not index files.) This means that data file contents are safe even if mysqld crashes, because the operating system ensures that the unflushed data is written to disk. You can force MySQL to flush everything to disk after every SQL statement by starting mysqld with the --flush option.

The preceding means that normally you should not get corrupted tables unless one of the following happens:

- The MySQL server or the server host was killed in the middle of an update.
Administration-Related Issues

- You have found a bug in `mysqld` that caused it to die in the middle of an update.

- Some external program is manipulating data files or index files at the same time as `mysqld` without locking the table properly.

- You are running many `mysqld` servers using the same data directory on a system that does not support good file system locks (normally handled by the `lockd` lock manager), or you are running multiple servers with external locking disabled.

- You have a crashed data file or index file that contains very corrupt data that confused `mysqld`.

- You have found a bug in the data storage code. This isn't likely, but it is at least possible. In this case, you can try to change the storage engine to another engine by using `ALTER TABLE` on a repaired copy of the table.

Because it is very difficult to know why something is crashing, first try to check whether things that work for others crash for you. Try the following things:

- Stop the `mysqld` server with `mysqldadmin shutdown`, run `myisamchk --silent --force */*.MYI` from the data directory to check all MyISAM tables, and restart `mysqld`. This ensures that you are running from a clean state. See Chapter 5, MySQL Server Administration.

- Start `mysqld` with the general query log enabled (see Section 5.4.3, “The General Query Log”). Then try to determine from the information written to the log whether some specific query kills the server. About 95% of all bugs are related to a particular query. Normally, this is one of the last queries in the log file just before the server restarts. See Section 5.4.3, “The General Query Log”. If you can repeatedly kill MySQL with a specific query, even when you have checked all tables just before issuing it, then you have isolated the bug and should submit a bug report for it. See Section 1.7, “How to Report Bugs or Problems”.

- Try to make a test case that we can use to repeat the problem. See Section 29.5, “Debugging and Porting MySQL”.

- Try the `fork_big.pl` script. (It is located in the `tests` directory of source distributions.)

- Configuring MySQL for debugging makes it much easier to gather information about possible errors if something goes wrong. Reconfigure MySQL with the `--with-debug=1` option to CMake and then recompile. See Section 29.5, “Debugging and Porting MySQL”.

- Make sure that you have applied the latest patches for your operating system.

- Use the `--skip-external-locking` option to `mysqld`. On some systems, the `lockd` lock manager does not work properly; the `--skip-external-locking` option tells `mysqld` not to use external locking. (This means that you cannot run two `mysqld` servers on the same data directory and that you must be careful if you use `myisamchk`. Nevertheless, it may be instructive to try the option as a test.)

- If `mysqld` appears to be running but not responding, try `mysqldadmin -u root processlist`. Sometimes `mysqld` is not hung even though it seems unresponsive. The problem may be that all connections are in use, or there may be some internal lock problem. `mysqldadmin -u root processlist` usually is able to make a connection even in these cases, and can provide useful information about the current number of connections and their status.

- Run the command `mysqldadmin -i 5 status` or `mysqldadmin -i 5 -r status` in a separate window to produce statistics while running other queries.

- Try the following:
  1. Start `mysqld` from `gdb` (or another debugger). See Section 29.5, “Debugging and Porting MySQL”.
  2. Run your test scripts.
3. Print the backtrace and the local variables at the three lowest levels. In **gdb**, you can do this with the following commands when **mysqld** has crashed inside **gdb**:

```
backtrace
info local
up
info local
up
info local
```

With **gdb**, you can also examine which threads exist with **info threads** and switch to a specific thread with **thread N**, where **N** is the thread ID.

- Try to simulate your application with a Perl script to force MySQL to crash or misbehave.
- Send a normal bug report. See Section 1.7, "How to Report Bugs or Problems". Be even more detailed than usual. Because MySQL works for many people, the crash might result from something that exists only on your computer (for example, an error that is related to your particular system libraries).
- If you have a problem with tables containing dynamic-length rows and you are using only **VARCHAR** columns (not **BLOB** or **TEXT** columns), you can try to change all **VARCHAR** to **CHAR** with **ALTER TABLE**. This forces MySQL to use fixed-size rows. Fixed-size rows take a little extra space, but are much more tolerant to corruption.

The current dynamic row code has been in use for several years with very few problems, but dynamic-length rows are by nature more prone to errors, so it may be a good idea to try this strategy to see whether it helps.

- Consider the possibility of hardware faults when diagnosing problems. Defective hardware can be the cause of data corruption. Pay particular attention to your memory and disk subsystems when troubleshooting hardware.

**B.4.3.4 How MySQL Handles a Full Disk**

This section describes how MySQL responds to disk-full errors (such as “no space left on device”), and to quota-exceeded errors (such as “write failed” or “user block limit reached”).

This section is relevant for writes to **MyISAM** tables. It also applies for writes to binary log files and binary log index file, except that references to “row” and “record” should be understood to mean “event.”

When a disk-full condition occurs, MySQL does the following:

- It checks once every minute to see whether there is enough space to write the current row. If there is enough space, it continues as if nothing had happened.
- Every 10 minutes it writes an entry to the log file, warning about the disk-full condition.

To alleviate the problem, take the following actions:

- To continue, you only have to free enough disk space to insert all records.
- Alternatively, to abort the thread, use **mysqladmin kill**. The thread is aborted the next time it checks the disk (in one minute).
- Other threads might be waiting for the table that caused the disk-full condition. If you have several “locked” threads, killing the one thread that is waiting on the disk-full condition enables the other threads to continue.

Exceptions to the preceding behavior are when you use **REPAIR TABLE** or **OPTIMIZE TABLE** or when the indexes are created in a batch after **LOAD DATA** or after an **ALTER TABLE** statement. All of these statements may create large temporary files that, if left to themselves, would cause big problems.
for the rest of the system. If the disk becomes full while MySQL is doing any of these operations, it removes the big temporary files and mark the table as crashed. The exception is that for ALTER TABLE, the old table is left unchanged.

### B.4.3.5 Where MySQL Stores Temporary Files

On Unix, MySQL uses the value of the `TMPDIR` environment variable as the path name of the directory in which to store temporary files. If `TMPDIR` is not set, MySQL uses the system default, which is usually `/tmp`, `/var/tmp`, or `/usr/tmp`.

On Windows, MySQL checks in order the values of the `TMPDIR`, `TEMP`, and `TMP` environment variables. For the first one found to be set, MySQL uses it and does not check those remaining. If none of `TMPDIR`, `TEMP`, or `TMP` are set, MySQL uses the Windows system default, which is usually `C:\windows\temp\`.

If the file system containing your temporary file directory is too small, you can use the `mysql --tmpdir` option to specify a directory in a file system where you have enough space.

The `--tmpdir` option can be set to a list of several paths that are used in round-robin fashion. Paths should be separated by colon characters (:) on Unix and semicolon characters (;) on Windows.

**Note**

To spread the load effectively, these paths should be located on different physical disks, not different partitions of the same disk.

If the MySQL server is acting as a replication slave, you can set the `slave_load_tmpdir` system variable to specify a separate directory for holding temporary files when replicating `LOAD DATA` statements. This directory should be in a disk-based file system (not a memory-based file system) so that the temporary files used to replicate LOAD DATA can survive machine restarts. The directory also should not be one that is cleared by the operating system during the system startup process. However, replication can now continue after a restart if the temporary files have been removed.

MySQL arranges that temporary files are removed if `mysql` is terminated. On platforms that support it (such as Unix), this is done by unlinking the file after opening it. The disadvantage of this is that the name does not appear in directory listings and you do not see a big temporary file that fills up the file system in which the temporary file directory is located. (In such cases, `ls -l` may be helpful in identifying large files associated with `mysql`.)

When sorting (ORDER BY or GROUP BY), MySQL normally uses one or two temporary files. The maximum disk space required is determined by the following expression:

\[
(length \text{ of what is sorted } + \text{ sizeof(row pointer)}) \\
* \text{ number of matched rows} \\
* 2
\]

The row pointer size is usually four bytes, but may grow in the future for really big tables.

For some statements, MySQL creates temporary SQL tables that are not hidden and have names that begin with `#sql`.

Some `SELECT` queries creates temporary SQL tables to hold intermediate results.

DDL operations that rebuild the table and are not performed online using the `ALGORITHM=INPLACE` technique create a temporary copy of the original table in the same directory as the original table.

Online DDL operations may use temporary log files for recording concurrent DML, temporary sort files when creating an index, and temporary intermediate tables files when rebuilding the table. For more information, see Section 15.12.3, “Online DDL Space Requirements”.

InnoDB user-created temporary tables and on-disk internal temporary tables are created in a temporary tablespace file named `ibtmp1` in the MySQL data directory. For more information, see Section 15.6.3.5, “Temporary Tablespaces”.
See also Section 15.15.7, “InnoDB INFORMATION_SCHEMA Temporary Table Info Table”.

The optional EXTENDED modifier causes SHOW TABLES to list hidden tables created by failed ALTER TABLE statements. See Section 13.7.7.37, “SHOW TABLES Statement”.

B.4.3.6 How to Protect or Change the MySQL Unix Socket File

The default location for the Unix socket file that the server uses for communication with local clients is /tmp/mysql.sock. (For some distribution formats, the directory might be different, such as /var/lib/mysql for RPMs.)

On some versions of Unix, anyone can delete files in the /tmp directory or other similar directories used for temporary files. If the socket file is located in such a directory on your system, this might cause problems.

On most versions of Unix, you can protect your /tmp directory so that files can be deleted only by their owners or the superuser (root). To do this, set the sticky bit on the /tmp directory by logging in as root and using the following command:

```
shell> chmod +t /tmp
```

You can check whether the sticky bit is set by executing `ls -ld /tmp`. If the last permission character is t, the bit is set.

Another approach is to change the place where the server creates the Unix socket file. If you do this, you should also let client programs know the new location of the file. You can specify the file location in several ways:

- Specify the path in a global or local option file. For example, put the following lines in `/etc/my.cnf`:

  ```
  [mysqld]
  socket=/path/to/socket
  
  [client]
  socket=/path/to/socket
  ```

  See Section 4.2.2.2, “Using Option Files”.

- Specify a --socket option on the command line to mysqld_safe and when you run client programs.

- Set the MYSQL_UNIX_PORT environment variable to the path of the Unix socket file.

- Recompile MySQL from source to use a different default Unix socket file location. Define the path to the file with the MYSQL_UNIX_ADDR option when you run CMake. See Section 2.9.7, “MySQL Source-Configuration Options”.

You can test whether the new socket location works by attempting to connect to the server with this command:

```
shell> mysqladmin --socket=/path/to/socket version
```

B.4.3.7 Time Zone Problems

If you have a problem with `SELECT NOW()` returning values in UTC and not your local time, you have to tell the server your current time zone. The same applies if `UNIX_TIMESTAMP()` returns the wrong value. This should be done for the environment in which the server runs (for example, in mysqld_safe or mysql.server). See Section 4.9, “Environment Variables”.

You can set the time zone for the server with the --timezone=timezone_name option to mysqld_safe. You can also set it by setting the TZ environment variable before you start mysqld.

The permissible values for --timezone or TZ are system dependent. Consult your operating system documentation to see what values are acceptable.
B.4.4 Query-Related Issues

B.4.4.1 Case Sensitivity in String Searches

For nonbinary strings (CHAR, VARCHAR, TEXT), string searches use the collation of the comparison operands. For binary strings (BINARY, VARBINARY, BLOB), comparisons use the numeric values of the bytes in the operands; this means that for alphabetic characters, comparisons will be case-sensitive.

A comparison between a nonbinary string and binary string is treated as a comparison of binary strings.

Simple comparison operations (\geq, >, =, <, \leq, sorting, and grouping) are based on each character's "sort value." Characters with the same sort value are treated as the same character. For example, if e and é have the same sort value in a given collation, they compare as equal.

The default character set and collation are utf8mb4 and utf8mb4_0900_ai_ci, so nonbinary string comparisons are case-insensitive by default. This means that if you search with col_name LIKE 'a %', you get all column values that start with A or a. To make this search case-sensitive, make sure that one of the operands has a case-sensitive or binary collation. For example, if you are comparing a column and a string that both have the utf8mb4 character set, you can use the COLLATE operator to cause either operand to have the utf8mb4_0900_as_cs or utf8mb4_bin collation:

```
col_name COLLATE utf8mb4_0900_as_cs LIKE 'a%'
col_name LIKE 'a' COLLATE utf8mb4_0900_as_cs
col_name COLLATE utf8mb4_bin LIKE 'a'
col_name LIKE 'a' COLLATE utf8mb4_bin
```

If you want a column always to be treated in case-sensitive fashion, declare it with a case-sensitive or binary collation. See Section 13.1.20, "CREATE TABLE Statement".

To cause a case-sensitive comparison of nonbinary strings to be case-insensitive, use COLLATE to name a case-insensitive collation. The strings in the following example normally are case-sensitive, but COLLATE changes the comparison to be case-insensitive:

```
mysql> SET NAMES 'utf8mb4';
mysql> SET @s1 = 'MySQL' COLLATE utf8mb4_bin,
       @s2 = 'mysql' COLLATE utf8mb4_bin;
mysql> SELECT @s1 = @s2;
+------------------+
| @s1 = @s2        |
+------------------+
|                  0 |
mysql> SELECT @s1 COLLATE utf8mb4_0900_ai_ci = @s2;
+--------------------------------------+
| @s1 COLLATE utf8mb4_0900_ai_ci = @s2 |
|                                    1 |
+--------------------------------------+
```

A binary string is case-sensitive in comparisons. To compare the string as case-insensitive, convert it to a nonbinary string and use COLLATE to name a case-insensitive collation:

```
mysql> SET @s = BINARY 'MySQL';
mysql> SELECT @s = 'mysql';
+-------------------+
| @s = 'mysql'      |
+-------------------+
|                   0 |
mysql> SELECT CONVERT(@s USING utf8mb4) COLLATE utf8mb4_0900_ai_ci = 'mysql';
+------------------------------------------+
| CONVERT(@s USING utf8mb4) COLLATE utf8mb4_0900_ai_ci = 'mysql' |
|                                                             1 |
+------------------------------------------+
```
To determine whether a value will compare as a nonbinary or binary string, use the `COLLATION()` function. This example shows that `VERSION()` returns a string that has a case-insensitive collation, so comparisons are case-insensitive:

```
mysql> SELECT COLLATION(VERSION());
+----------------------+
| COLLATION(VERSION()) |
+----------------------+
| utf8_general_ci      |
+----------------------+
```

For binary strings, the collation value is `binary`, so comparisons will be case sensitive. One context in which you will see `binary` is for compression functions, which return binary strings as a general rule:

```
mysql> SELECT COLLATION(COMPRESS('x'));
+--------------------------+
| COLLATION(COMPRESS('x')) |
| binary                   |
+--------------------------+
```

To check the sort value of a string, the `WEIGHT_STRING()` may be helpful. See Section 12.7, “String Functions and Operators”.

### B.4.4.2 Problems Using DATE Columns

The format of a `DATE` value is `'YYYY-MM-DD'`. According to standard SQL, no other format is permitted. You should use this format in `UPDATE` expressions and in the `WHERE` clause of `SELECT` statements. For example:

```
SELECT * FROM t1 WHERE date >= '2003-05-05';
```

As a convenience, MySQL automatically converts a date to a number if the date is used in numeric context and vice versa. MySQL also permits a “relaxed” string format when updating and in a `WHERE` clause that compares a date to a `DATE`, `DATETIME`, or `TIMESTAMP` column. “Relaxed” format means that any punctuation character may be used as the separator between parts. For example, `'2004-08-15'` and `'2004#08#15'` are equivalent. MySQL can also convert a string containing no separators (such as `'20040815'`), provided it makes sense as a date.

When you compare a `DATE`, `TIME`, `DATETIME`, or `TIMESTAMP` to a constant string with the `<`, `<=`, `=`, `>=`, `>`, or `BETWEEN` operators, MySQL normally converts the string to an internal long integer for faster comparison (and also for a bit more “relaxed” string checking). However, this conversion is subject to the following exceptions:

- When you compare two columns
- When you compare a `DATE`, `TIME`, `DATETIME`, or `TIMESTAMP` column to an expression
- When you use any comparison method other than those just listed, such as `IN` or `STRCMP()`.

For those exceptions, the comparison is done by converting the objects to strings and performing a string comparison.

To be on the safe side, assume that strings are compared as strings and use the appropriate string functions if you want to compare a temporal value to a string.

The special “zero” date `'0000-00-00'` can be stored and retrieved as `'0000-00-00'`. When a `'0000-00-00'` date is used through Connector/ODBC, it is automatically converted to `NULL` because ODBC cannot handle that kind of date.

Because MySQL performs the conversions just described, the following statements work (assume that `idate` is a `DATE` column):
INSERT INTO t1 (idate) VALUES (19970505);
INSERT INTO t1 (idate) VALUES ('19970505');
INSERT INTO t1 (idate) VALUES ('97-05-05');
INSERT INTO t1 (idate) VALUES ('1997.05.05');
INSERT INTO t1 (idate) VALUES ('1997 05 05');
INSERT INTO t1 (idate) VALUES ('0000-00-00');
SELECT idate FROM t1 WHERE idate >= '1997-05-05';
SELECT idate FROM t1 WHERE idate >= 19970505;
SELECT MOD(idate,100) FROM t1 WHERE idate >= 19970505;
SELECT idate FROM t1 WHERE idate >= '19970505';

However, the following statement does not work:

SELECT idate FROM t1 WHERE STRCMP(idate,'20030505')=0;

`STRCMP()` is a string function, so it converts `idate` to a string in 'YYYY-MM-DD' format and performs a string comparison. It does not convert '20030505' to the date '2003-05-05' and perform a date comparison.

If you enable the `ALLOW_INVALID_DATES` SQL mode, MySQL permits you to store dates that are given only limited checking: MySQL requires only that the day is in the range from 1 to 31 and the month is in the range from 1 to 12. This makes MySQL very convenient for Web applications where you obtain year, month, and day in three different fields and you want to store exactly what the user inserted (without date validation).

MySQL permits you to store dates where the day or month and day are zero. This is convenient if you want to store a birthdate in a `DATE` column and you know only part of the date. To disallow zero month or day parts in dates, enable the `NO_ZERO_IN_DATE` mode.

MySQL permits you to store a “zero” value of '0000-00-00' as a “dummy date.” This is in some cases more convenient than using NULL values. If a date to be stored in a `DATE` column cannot be converted to any reasonable value, MySQL stores '0000-00-00'. To disallow '0000-00-00', enable the `NO_ZERO_DATE` mode.

To have MySQL check all dates and accept only legal dates (unless overridden by `IGNORE`), set the `sql_mode` system variable to "NO_ZERO_IN_DATE,NO_ZERO_DATE".

**B.4.4.3 Problems with NULL Values**

The concept of the NULL value is a common source of confusion for newcomers to SQL, who often think that `NULL` is the same thing as an empty string ''. This is not the case. For example, the following statements are completely different:

```
mysql> INSERT INTO my_table (phone) VALUES (NULL);
mysql> INSERT INTO my_table (phone) VALUES (''');
```

Both statements insert a value into the `phone` column, but the first inserts a NULL value and the second inserts an empty string. The meaning of the first can be regarded as “phone number is not known” and the meaning of the second can be regarded as “the person is known to have no phone, and thus no phone number.”

To help with NULL handling, you can use the `IS NULL` and `IS NOT NULL` operators and the `IFNULL()` function.

In SQL, the NULL value is never true in comparison to any other value, even NULL. An expression that contains NULL always produces a NULL value unless otherwise indicated in the documentation for the operators and functions involved in the expression. All columns in the following example return NULL:

```
mysql> SELECT NULL, 1+NULL, CONCAT('Invisible',NULL);
```

To search for column values that are NULL, you cannot use an `expr = NULL` test. The following statement returns no rows, because `expr = NULL` is never true for any expression:
Query-Related Issues

mysql> SELECT * FROM my_table WHERE phone = NULL;

To look for NULL values, you must use the IS NULL test. The following statements show how to find the NULL phone number and the empty phone number:

mysql> SELECT * FROM my_table WHERE phone IS NULL;
mysql> SELECT * FROM my_table WHERE phone = '';

See Section 3.3.4.6, “Working with NULL Values”, for additional information and examples.

You can add an index on a column that can have NULL values if you are using the MyISAM, InnoDB, or MEMORY storage engine. Otherwise, you must declare an indexed column NOT NULL, and you cannot insert NULL into the column.

When reading data with LOAD DATA, empty or missing columns are updated with '' . To load a NULL value into a column, use \N in the data file. The literal word NULL may also be used under some circumstances. See Section 13.2.7, "LOAD DATA Statement".

When using DISTINCT, GROUP BY, or ORDER BY, all NULL values are regarded as equal.

When using ORDER BY, NULL values are presented first, or last if you specify DESC to sort in descending order.

Aggregate (summary) functions such as COUNT(), MIN(), and SUM() ignore NULL values. The exception to this is COUNT(*), which counts rows and not individual column values. For example, the following statement produces two counts. The first is a count of the number of rows in the table, and the second is a count of the number of non-NULL values in the age column:

mysql> SELECT COUNT(*), COUNT(age) FROM person;

For some data types, MySQL handles NULL values specially. If you insert NULL into a TIMESTAMP column, the current date and time is inserted. If you insert NULL into an integer or floating-point column that has the AUTO_INCREMENT attribute, the next number in the sequence is inserted.

B.4.4.4 Problems with Column Aliases

An alias can be used in a query select list to give a column a different name. You can use the alias in GROUP BY, ORDER BY, or HAVING clauses to refer to the column:

SELECT SQRT(a*b) AS root FROM tbl_name
GROUP BY root HAVING root > 0;
SELECT id, COUNT(*) AS cnt FROM tbl_name
GROUP BY id HAVING cnt > 0;
SELECT id AS 'Customer identity' FROM tbl_name;

Standard SQL disallows references to column aliases in a WHERE clause. This restriction is imposed because when the WHERE clause is evaluated, the column value may not yet have been determined. For example, the following query is illegal:

SELECT id, COUNT(*) AS cnt FROM tbl_name
WHERE cnt > 0 GROUP BY id;

The WHERE clause determines which rows should be included in the GROUP BY clause, but it refers to the alias of a column value that is not known until after the rows have been selected, and grouped by the GROUP BY.

In the select list of a query, a quoted column alias can be specified using identifier or string quoting characters:

SELECT 1 AS `one`, 2 AS 'two';

Elsewhere in the statement, quoted references to the alias must use identifier quoting or the reference is treated as a string literal. For example, this statement groups by the values in column id, referenced using the alias 'a':

SELECT id AS 'Customer identity' FROM tbl_name;
B.4.4.5 Rollback Failure for Nontransactional Tables

If you receive the following message when trying to perform a ROLLBACK, it means that one or more of the tables you used in the transaction do not support transactions:

Warning: Some non-transactional changed tables couldn't be rolled back

These nontransactional tables are not affected by the ROLLBACK statement.

If you were not deliberately mixing transactional and nontransactional tables within the transaction, the most likely cause for this message is that a table you thought was transactional actually is not. This can happen if you try to create a table using a transactional storage engine that is not supported by your mysqld server (or that was disabled with a startup option). If mysqld does not support a storage engine, it instead creates the table as a MyISAM table, which is nontransactional.

You can check the storage engine for a table by using either of these statements:

SHOW TABLE STATUS LIKE 'tbl_name';
SHOW CREATE TABLE tbl_name;

See Section 13.7.7.36, “SHOW TABLE STATUS Statement”, and Section 13.7.7.10, “SHOW CREATE TABLE Statement”.

To check which storage engines your mysqld server supports, use this statement:

SHOW ENGINES;

See Section 13.7.7.16, “SHOW ENGINES Statement” for full details.

B.4.4.6 Deleting Rows from Related Tables

If the total length of the DELETE statement for related_table is more than the default value of the max_allowed_packet system variable, you should split it into smaller parts and execute multiple DELETE statements. You probably get the fastest DELETE by specifying only 100 to 1,000 related_column values per statement if the related_column is indexed. If the related_column isn't indexed, the speed is independent of the number of arguments in the IN clause.

B.4.4.7 Solving Problems with No Matching Rows

If you have a complicated query that uses many tables but that returns no rows, you should use the following procedure to find out what is wrong:

1. Test the query with EXPLAIN to check whether you can find something that is obviously wrong. See Section 13.8.2, “EXPLAIN Statement”.
2. Select only those columns that are used in the WHERE clause.
3. Remove one table at a time from the query until it returns some rows. If the tables are large, it is a good idea to use LIMIT 10 with the query.
4. Issue a SELECT for the column that should have matched a row against the table that was last removed from the query.
5. If you are comparing FLOAT or DOUBLE columns with numbers that have decimals, you cannot use equality (=) comparisons. This problem is common in most computer languages because not all
floating-point values can be stored with exact precision. In some cases, changing the \texttt{FLOAT} to a \texttt{DOUBLE} fixes this. See Section B.4.4.8, “Problems with Floating-Point Values”.

6. If you still cannot figure out what is wrong, create a minimal test that can be run with \texttt{mysql test < query.sql} that shows your problems. You can create a test file by dumping the tables with \texttt{mysqldump --quick db_name tbl_name_1 ... tbl_name_n > query.sql}. Open the file in an editor, remove some insert lines (if there are more than needed to demonstrate the problem), and add your \texttt{SELECT} statement at the end of the file.

Verify that the test file demonstrates the problem by executing these commands:

\begin{verbatim}
shell> mysqladmin create test2
shell> mysql test2 < query.sql
\end{verbatim}

Attach the test file to a bug report, which you can file using the instructions in Section 1.7, “How to Report Bugs or Problems”.

B.4.4.8 Problems with Floating-Point Values

Floating-point numbers sometimes cause confusion because they are approximate and not stored as exact values. A floating-point value as written in an SQL statement may not be the same as the value represented internally. Attempts to treat floating-point values as exact in comparisons may lead to problems. They are also subject to platform or implementation dependencies. The \texttt{FLOAT} and \texttt{DOUBLE} data types are subject to these issues. For \texttt{DECIMAL} columns, MySQL performs operations with a precision of 65 decimal digits, which should solve most common inaccuracy problems.

The following example uses \texttt{DOUBLE} to demonstrate how calculations that are done using floating-point operations are subject to floating-point error.

\begin{verbatim}
mysql> CREATE TABLE t1 (i INT, d1 DOUBLE, d2 DOUBLE);
mysql> INSERT INTO t1 VALUES (1, 101.40, 21.40), (1, -80.00, 0.00),
   -> (2, 0.00, 0.00), (2, -13.20, 0.00), (2, 59.60, 46.40),
   -> (2, 30.40, 30.40), (3, 37.00, 7.40), (3, -29.60, 0.00),
   -> (4, 60.00, 15.40), (4, -10.60, 0.00), (4, -34.00, 0.00),
   -> (5, 33.00, 0.00), (5, -25.80, 0.00), (5, 0.00, 7.20),
   -> (6, 0.00, 0.00), (6, -51.40, 0.00);
mysql> SELECT i, SUM(d1) AS a, SUM(d2) AS b
   -> FROM t1 GROUP BY i HAVING a <> b;
\end{verbatim}

\begin{verbatim}
+-------+-------+-------+
| i    | a     | b     |
+-------+-------+-------+
|    1  | 21.4  | 21.4  |
|    2  | 76.8  | 76.8  |
|    3  |  7.4  |  7.4  |
|    4  | 15.4  | 15.4  |
|    5  |  7.2  |  7.2  |
|    6  | 51.4  |  0    |
+-------+-------+-------+
\end{verbatim}

The result is correct. Although the first five records look like they should not satisfy the comparison (the values of \texttt{a} and \texttt{b} do not appear to be different), they may do so because the difference between the numbers shows up around the tenth decimal or so, depending on factors such as computer architecture or the compiler version or optimization level. For example, different CPUs may evaluate floating-point numbers differently.

If columns \texttt{d1} and \texttt{d2} had been defined as \texttt{DECIMAL} rather than \texttt{DOUBLE}, the result of the \texttt{SELECT} query would have contained only one row—the last one shown above.

The correct way to do floating-point number comparison is to first decide on an acceptable tolerance for differences between the numbers and then do the comparison against the tolerance value. For example, if we agree that floating-point numbers should be regarded the same if they are same within a precision of one in ten thousand (0.0001), the comparison should be written to find differences larger than the tolerance value:
Optimizer-Related Issues

MySQL uses a cost-based optimizer to determine the best way to resolve a query. In many cases, MySQL can calculate the best possible query plan, but sometimes MySQL does not have enough information about the data at hand and has to make “educated” guesses about the data.

For the cases when MySQL does not do the "right" thing, tools that you have available to help MySQL are:

- Use the `EXPLAIN` statement to get information about how MySQL processes a query. To use it, just add the keyword `EXPLAIN` to the front of your `SELECT` statement:
  ```sql
  mysql> EXPLAIN SELECT * FROM t1, t2 WHERE t1.i = t2.i;
  
  EXPLAIN is discussed in more detail in Section 13.8.2, “EXPLAIN Statement”.
  ```

- Use `ANALYZE TABLE tbl_name` to update the key distributions for the scanned table. See Section 13.7.3.1, “ANALYZE TABLE Statement”.

- Use `FORCE INDEX` for the scanned table to tell MySQL that table scans are very expensive compared to using the given index:
  ```sql
  SELECT * FROM t1, t2 FORCE INDEX (index_for_column)
  WHERE t1.col_name = t2.col_name;
  
  USE INDEX and IGNORE INDEX may also be useful. See Section 8.9.4, “Index Hints”.
  ```

- Global and table-level `STRAIGHT_JOIN`. See Section 13.2.10, “SELECT Statement”.

Floating-point values are subject to platform or implementation dependencies. Suppose that you execute the following statements:

```sql
CREATE TABLE t1(c1 FLOAT(53,0), c2 FLOAT(53,0));
INSERT INTO t1 VALUES('1e+52','-1e+52');
SELECT * FROM t1;
```

On some platforms, the `SELECT` statement returns `inf` and `-inf`. On others, it returns `0` and `-0`.

An implication of the preceding issues is that if you attempt to create a replication slave by dumping table contents with `mysqldump` on the master and reloading the dump file into the slave, tables containing floating-point columns might differ between the two hosts.

B.4.5 Optimizer-Related Issues

Conversely, to get rows where the numbers are the same, the test should find differences within the tolerance value:

```sql
SELECT i, SUM(d1) AS a, SUM(d2) AS b FROM t1 -> GROUP BY i HAVING ABS(a - b) <= 0.0001;
```

5 rows in set (0.03 sec)
• You can tune global or thread-specific system variables. For example, start mysqld with the `--max-seeks-for-key=1000` option or use `SET max_seeks_for_key=1000` to tell the optimizer to assume that no key scan causes more than 1,000 key seeks. See Section 5.1.8, “Server System Variables”.

B.4.6 Table Definition-Related Issues

B.4.6.1 Problems with ALTER TABLE

If you get a duplicate-key error when using `ALTER TABLE` to change the character set or collation of a character column, the cause is either that the new column collation maps two keys to the same value or that the table is corrupted. In the latter case, you should run `REPAIR TABLE` on the table. `REPAIR TABLE` works for MyISAM, ARCHIVE, and CSV tables.

If you use `ALTER TABLE` on a transactional table or if you are using Windows, `ALTER TABLE` unlocks the table if you had done a `LOCK TABLE` on it. This is done because InnoDB and these operating systems cannot drop a table that is in use.

B.4.6.2 TEMPORARY Table Problems

Temporary tables created with `CREATE TEMPORARY TABLE` have the following limitations:

• TEMPORARY tables are supported only by the InnoDB, MEMORY, MyISAM, and MERGE storage engines.

• Temporary tables are not supported for NDB Cluster.

• The `SHOW TABLES` statement does not list TEMPORARY tables.

• To rename TEMPORARY tables, `RENAME TABLE` does not work. Use `ALTER TABLE` instead:

  ```sql
  ALTER TABLE old_name RENAME new_name;
  ```

• You cannot refer to a TEMPORARY table more than once in the same query. For example, the following does not work:

  ```sql
  SELECT * FROM temp_table JOIN temp_table AS t2;
  ```

  The statement produces this error:

  ```
  ERROR 1137: Can't reopen table: 'temp_table'
  ```

  You can work around this issue if your query permits use of a common table expression (CTE) rather than a TEMPORARY table. For example, this fails with the Can't reopen table error:

  ```sql
  CREATE TEMPORARY TABLE t SELECT 1 AS col_a, 2 AS col_b;
  SELECT * FROM t AS t1 JOIN t AS t2;
  ```

  To avoid the error, use a `WITH` clause that defines a CTE, rather than the TEMPORARY table:

  ```sql
  WITH cte AS (SELECT 1 AS col_a, 2 AS col_b)
  SELECT * FROM cte AS t1 JOIN cte AS t2;
  ```

• The Can't reopen table error also occurs if you refer to a temporary table multiple times in a stored function under different aliases, even if the references occur in different statements within the function. It may occur for temporary tables created outside stored functions and referred to across multiple calling and callee functions.

• If a TEMPORARY is created with the same name as an existing non-TEMPORARY table, the non-TEMPORARY table is hidden until the TEMPORARY table is dropped, even if the tables use different storage engines.
• There are known issues in using temporary tables with replication. See Section 17.5.1.30, “Replication and Temporary Tables”, for more information.

**B.4.7 Known Issues in MySQL**

This section lists known issues in recent versions of MySQL.

For information about platform-specific issues, see the installation and porting instructions in Section 2.1, “General Installation Guidance”, and Section 29.5, “Debugging and Porting MySQL”.

The following problems are known:

• Subquery optimization for IN is not as effective as for =.

• Even if you use lower_case_table_names=2 (which enables MySQL to remember the case used for databases and table names), MySQL does not remember the case used for database names for the function DATABASE() or within the various logs (on case-insensitive systems).

• Dropping a FOREIGN KEY constraint does not work in replication because the constraint may have another name on the slave.

• REPLACE (and LOAD DATA with the REPLACE option) does not trigger ON DELETE CASCADE.

• DISTINCT with ORDER BY does not work inside GROUP_CONCAT() if you do not use all and only those columns that are in the DISTINCT list.

• When inserting a big integer value (between $2^{63}$ and $2^{64}-1$) into a decimal or string column, it is inserted as a negative value because the number is evaluated in signed integer context.

• With statement-based binary logging, the master writes the executed queries to the binary log. This is a very fast, compact, and efficient logging method that works perfectly in most cases. However, it is possible for the data on the master and slave to become different if a query is designed in such a way that the data modification is nondeterministic (generally not a recommended practice, even outside of replication).

For example:

• CREATE TABLE ... SELECT or INSERT ... SELECT statements that insert zero or NULL values into an AUTO_INCREMENT column.

• DELETE if you are deleting rows from a table that has foreign keys with ON DELETE CASCADE properties.

• REPLACE ... SELECT, INSERT IGNORE ... SELECT if you have duplicate key values in the inserted data.

**If and only if the preceding queries have no ORDER BY clause guaranteeing a deterministic order.**

For example, for INSERT ... SELECT with no ORDER BY, the SELECT may return rows in a different order (which results in a row having different ranks, hence getting a different number in the AUTO_INCREMENT column), depending on the choices made by the optimizers on the master and slave.

A query is optimized differently on the master and slave only if:

• The table is stored using a different storage engine on the master than on the slave. (It is possible to use different storage engines on the master and slave. For example, you can use InnoDB on the master, but MyISAM on the slave if the slave has less available disk space.)

• MySQL buffer sizes (key_buffer_size, and so on) are different on the master and slave.
Known Issues in MySQL

- The master and slave run different MySQL versions, and the optimizer code differs between these versions.

This problem may also affect database restoration using `mysqlbinlog|mysql`.

The easiest way to avoid this problem is to add an `ORDER BY` clause to the aforementioned nondeterministic queries to ensure that the rows are always stored or modified in the same order. Using row-based or mixed logging format also avoids the problem.

- Log file names are based on the server host name if you do not specify a file name with the startup option. To retain the same log file names if you change your host name to something else, you must explicitly use options such as `--log-bin=old_host_name-bin`. See Section 5.1.7, "Server Command Options". Alternatively, rename the old files to reflect your host name change. If these are binary logs, you must edit the binary log index file and fix the binary log file names there as well. (The same is true for the relay logs on a slave server.)

- `mysqlbinlog` does not delete temporary files left after a `LOAD DATA` statement. See Section 4.6.8, "mysqlbinlog — Utility for Processing Binary Log Files".

- `RENAME` does not work with `TEMPORARY` tables or tables used in a `MERGE` table.

- When using `SET CHARACTER SET`, you cannot use translated characters in database, table, and column names.

- Prior to MySQL 8.0.17, you cannot use `_` or `% with `ESCAPE` in `LIKE ... ESCAPE`.

- The server uses only the first `max_sort_length` bytes when comparing data values. This means that values cannot reliably be used in `GROUP BY`, `ORDER BY`, or `DISTINCT` if they differ only after the first `max_sort_length` bytes. To work around this, increase the variable value. The default value of `max_sort_length` is 1024 and can be changed at server startup time or at runtime.

- Numeric calculations are done with `BIGINT` or `DOUBLE` (both are normally 64 bits long). Which precision you get depends on the function. The general rule is that bit functions are performed with `BIGINT` precision, `IF()` and `ELT()` with `BIGINT` or `DOUBLE` precision, and the rest with `DOUBLE` precision. You should try to avoid using unsigned long long values if they resolve to be larger than 63 bits (9223372036854775807) for anything other than bit fields.

- You can have up to 255 `ENUM` and `SET` columns in one table.

- In `MIN()`, `MAX()`, and other aggregate functions, MySQL currently compares `ENUM` and `SET` columns by their string value rather than by the string's relative position in the set.

- In an `UPDATE` statement, columns are updated from left to right. If you refer to an updated column, you get the updated value instead of the original value. For example, the following statement increments `KEY` by 2, not 1:

  ```
  mysql> UPDATE tbl_name SET KEY=KEY+1,KEY=KEY+1;
  ```

- You can refer to multiple temporary tables in the same query, but you cannot refer to any given temporary table more than once. For example, the following does not work:

  ```
  mysql> SELECT * FROM temp_table, temp_table AS t2;
  ERROR 1137: Can't reopen table: 'temp_table'
  ```

- The optimizer may handle `DISTINCT` differently when you are using "hidden" columns in a join than when you are not. In a join, hidden columns are counted as part of the result (even if they are not shown), whereas in normal queries, hidden columns do not participate in the `DISTINCT` comparison.

  An example of this is:
  ```
  SELECT DISTINCT mp3id FROM band_downloads
  WHERE userid = 9 ORDER BY id DESC;
  ```
and

```sql
SELECT DISTINCT band_downloads.mp3id
FROM band_downloads,band_mp3
WHERE band_downloads.userid = 9
AND band_mp3.id = band_downloads.mp3id
ORDER BY band_downloads.id DESC;
```

In the second case, you may get two identical rows in the result set (because the values in the hidden `id` column may differ).

Note that this happens only for queries that do not have the `ORDER BY` columns in the result.

- If you execute a `PROCEDURE` on a query that returns an empty set, in some cases the `PROCEDURE` does not transform the columns.

- Creation of a table of type `MERGE` does not check whether the underlying tables are compatible types.

- If you use `ALTER TABLE` to add a `UNIQUE` index to a table used in a `MERGE` table and then add a normal index on the `MERGE` table, the key order is different for the tables if there was an old, non-`UNIQUE` key in the table. This is because `ALTER TABLE` puts `UNIQUE` indexes before normal indexes to be able to detect duplicate keys as early as possible.

MySQL Glossary

These terms are commonly used in information about the MySQL database server. This glossary originated as a reference for terminology about the InnoDB storage engine, and the majority of definitions are InnoDB-related.

A

.ARM file
Metadata for ARCHIVE tables. Contrast with .ARZ file. Files with this extension are always included in backups produced by the mysqlbackup command of the MySQL Enterprise Backup product. See Also .ARZ file, MySQL Enterprise Backup, mysqlbackup command.

.ARZ file
Data for ARCHIVE tables. Contrast with .ARM file. Files with this extension are always included in backups produced by the mysqlbackup command of the MySQL Enterprise Backup product. See Also .ARM file, MySQL Enterprise Backup, mysqlbackup command.

ACID
An acronym standing for atomicity, consistency, isolation, and durability. These properties are all desirable in a database system, and are all closely tied to the notion of a transaction. The transactional features of InnoDB adhere to the ACID principles.

Transactions are atomic units of work that can be committed or rolled back. When a transaction makes multiple changes to the database, either all the changes succeed when the transaction is committed, or all the changes are undone when the transaction is rolled back.

The database remains in a consistent state at all times — after each commit or rollback, and while transactions are in progress. If related data is being updated across multiple tables, queries see either all old values or all new values, not a mix of old and new values.

Transactions are protected (isolated) from each other while they are in progress; they cannot interfere with each other or see each other's uncommitted data. This isolation is achieved through the locking mechanism. Experienced users can adjust the isolation level, trading off less protection in favor of increased performance and concurrency, when they can be sure that the transactions really do not interfere with each other.

The results of transactions are durable: once a commit operation succeeds, the changes made by that transaction are safe from power failures, system crashes, race conditions, or other potential dangers that many non-database applications are vulnerable to. Durability typically involves writing to disk storage, with a certain amount of redundancy to protect against power failures or software crashes during write operations. (In InnoDB, the doublewrite buffer assists with durability.) See Also atomic, commit, concurrency, doublewrite buffer, isolation level, locking, rollback, transaction.

adaptive flushing
An algorithm for InnoDB tables that smooths out the I/O overhead introduced by checkpoints. Instead of flushing all modified pages from the buffer pool to the data files at once, MySQL periodically flushes small sets of modified pages. The adaptive flushing algorithm extends this process by estimating the optimal rate to perform these periodic flushes, based on the rate of flushing and how fast redo information is generated. See Also buffer pool, checkpoint, data files, flush, InnoDB, page, redo log.

adaptive hash index
An optimization for InnoDB tables that can speed up lookups using = and IN operators, by constructing a hash index in memory. MySQL monitors index searches for InnoDB tables, and if queries could benefit from a hash index, it builds one automatically for index pages that are frequently accessed. In a sense, the adaptive hash index configures MySQL at runtime to take advantage of ample main memory, coming closer to the architecture of main-memory databases. This feature is controlled by the innodb_adaptive_hash_index configuration option. Because this feature benefits some workloads and not others, and the memory used for the hash index is reserved in the buffer pool, typically you should benchmark with this feature both enabled and disabled.
The hash index is always built based on an existing **B-tree** index on the table. MySQL can build a hash index on a prefix of any length of the key defined for the B-tree, depending on the pattern of searches against the index. A hash index can be partial; the whole B-tree index does not need to be cached in the buffer pool.

In MySQL 5.6 and higher, another way to take advantage of fast single-value lookups with InnoDB tables is to use the **InnoDB memcached** plugin. See Section 15.20, "InnoDB memcached Plugin" for details. See Also **B-tree**, buffer pool, hash index, memcached, page, secondary index.

**AIO**

Acronym for asynchronous I/O. You might see this acronym in InnoDB messages or keywords. See Also asynchronous I/O.

**application programming interface (API)**

A set of functions or procedures. An API provides a stable set of names and types for functions, procedures, parameters, and return values.

**apply**

When a backup produced by the **MySQL Enterprise Backup** product does not include the most recent changes that occurred while the backup was underway, the process of updating the backup files to include those changes is known as the **apply** step. It is specified by the apply-log option of the mysqlbackup command.

Before the changes are applied, we refer to the files as a **raw backup**. After the changes are applied, we refer to the files as a **prepared backup**. The changes are recorded in the ibbackup_logfile file; once the apply step is finished, this file is no longer necessary. See Also hot backup, ibbackup_logfile, MySQL Enterprise Backup, prepared backup, raw backup.

**asynchronous I/O**

A type of I/O operation that allows other processing to proceed before the I/O is completed. Also known as **nonblocking I/O** and abbreviated as **AIO**. InnoDB uses this type of I/O for certain operations that can run in parallel without affecting the reliability of the database, such as reading pages into the **buffer pool** that have not actually been requested, but might be needed soon.

Historically, InnoDB used asynchronous I/O on Windows systems only. Starting with the InnoDB Plugin 1.1 and MySQL 5.5, InnoDB uses asynchronous I/O on Linux systems. This change introduces a dependency on libaio. Asynchronous I/O on Linux systems is configured using the innodb_use_native_aio option, which is enabled by default. On other Unix-like systems, InnoDB uses synchronous I/O only. See Also buffer pool, nonblocking I/O.

**atomic**

In the SQL context, **transactions** are units of work that either succeed entirely (when committed) or have no effect at all (when rolled back). The indivisible ("atomic") property of transactions is the "A" in the acronym **ACID**. See Also ACID, commit, rollback, transaction.

**atomic DDL**

An atomic DDL statement is one that combines the data dictionary updates, storage engine operations, and binary log writes associated with a DDL operation into a single, atomic transaction. The transaction is either fully committed or rolled back, even if the server halts during the operation. Atomic DDL support was added in MySQL 8.0. For more information, see Section 13.1.1, “Atomic Data Definition Statement Support”. See Also binary log, data dictionary, DDL, storage engine.

**atomic instruction**

Special instructions provided by the CPU, to ensure that critical low-level operations cannot be interrupted.

**auto-increment**

A property of a table column (specified by the **AUTO_INCREMENT** keyword) that automatically adds an ascending sequence of values in the column.

It saves work for the developer, not to have to produce new unique values when inserting new rows. It provides useful information for the query optimizer, because the column is known to be not null and with
unique values. The values from such a column can be used as lookup keys in various contexts, and because they are auto-generated there is no reason to ever change them; for this reason, primary key columns are often specified as auto-incrementing.

Auto-increment columns can be problematic with statement-based replication, because replaying the statements on a slave might not produce the same set of column values as on the master, due to timing issues. When you have an auto-incrementing primary key, you can use statement-based replication only with the setting `innodb_autoinc_lock_mode=1`. If you have `innodb_autoinc_lock_mode=2`, which allows higher concurrency for insert operations, use row-based replication rather than statement-based replication. The setting `innodb_autoinc_lock_mode=0` should not be used except for compatibility purposes.

Consecutive lock mode (`innodb_autoinc_lock_mode=1`) is the default setting prior to MySQL 8.0.3. As of MySQL 8.0.3, interleaved lock mode (`innodb_autoinc_lock_mode=2`) is the default, which reflects the change from statement-based to row-based replication as the default replication type.

See Also auto-increment locking, `innodb_autoinc_lock_mode`, primary key, row-based replication, statement-based replication.

auto-increment locking

The convenience of an auto-increment primary key involves some tradeoff with concurrency. In the simplest case, if one transaction is inserting values into the table, any other transactions must wait to do their own inserts into that table, so that rows inserted by the first transaction receive consecutive primary key values. InnoDB includes optimizations and the `innodb_autoinc_lock_mode` option so that you can configure and optimal balance between predictable sequences of auto-increment values and maximum concurrency for insert operations.

See Also auto-increment, concurrency, `innodb_autoinc_lock_mode`.

autocommit

A setting that causes a commit operation after each SQL statement. This mode is not recommended for working with InnoDB tables with transactions that span several statements. It can help performance for read-only transactions on InnoDB tables, where it minimizes overhead from locking and generation of undo data, especially in MySQL 5.6.4 and up. It is also appropriate for working with MyISAM tables, where transactions are not applicable.

See Also commit, locking, read-only transaction, SQL, transaction, undo.

availability

The ability to cope with, and if necessary recover from, failures on the host, including failures of MySQL, the operating system, or the hardware and maintenance activity that may otherwise cause downtime. Often paired with scalability as critical aspects of a large-scale deployment.

See Also scalability.

B

B-tree

A tree data structure that is popular for use in database indexes. The structure is kept sorted at all times, enabling fast lookup for exact matches (equals operator) and ranges (for example, greater than, less than, and BETWEEN operators). This type of index is available for most storage engines, such as InnoDB and MyISAM.

Because B-tree nodes can have many children, a B-tree is not the same as a binary tree, which is limited to 2 children per node.

Contrast with hash index, which is only available in the MEMORY storage engine. The MEMORY storage engine can also use B-tree indexes, and you should choose B-tree indexes for MEMORY tables if some queries use range operators.

The use of the term B-tree is intended as a reference to the general class of index design. B-tree structures used by MySQL storage engines may be regarded as variants due to sophistications not present in a classic B-tree design. For related information, refer to the InnoDB Page Structure Fil Header section of the MySQL Internals Manual.
backticks

Identifiers within MySQL SQL statements must be quoted using the backtick character (``) if they contain special characters or reserved words. For example, to refer to a table named `FOO#BAR` or a column named `SELECT`, you would specify the identifiers as ``FOO#BAR` and `SELECT`. Since the backticks provide an extra level of safety, they are used extensively in program-generated SQL statements, where the identifier names might not be known in advance.

Many other database systems use double quotation marks ("") around such special names. For portability, you can enable `ANSI_QUOTES` mode in MySQL and use double quotation marks instead of backticks to qualify identifier names.

See Also `hash index`.

backup

The process of copying some or all table data and metadata from a MySQL instance, for safekeeping. Can also refer to the set of copied files. This is a crucial task for DBAs. The reverse of this process is the restore operation.

With MySQL, physical backups are performed by the MySQL Enterprise Backup product, and logical backups are performed by the `mysqldump` command. These techniques have different characteristics in terms of size and representation of the backup data, and speed (especially speed of the restore operation).

Backups are further classified as hot, warm, or cold depending on how much they interfere with normal database operation. (Hot backups have the least interference, cold backups the most.) See Also cold backup, hot backup, logical backup, MySQL Enterprise Backup, `mysqldump`, physical backup, warm backup.

base column

A non-generated table column upon which a stored generated column or virtual generated column is based. In other words, a base column is a non-generated table column that is part of a generated column definition.

See Also generated column, stored generated column, virtual generated column.

beta

An early stage in the life of a software product, when it is available only for evaluation, typically without a definite release number or a number less than 1. InnoDB does not use the beta designation, preferring an early adopter phase that can extend over several point releases, leading to a GA release.

See Also early adopter, GA.

binary log

A file containing a record of all statements that attempt to change table data. These statements can be replayed to bring slave servers up to date in a replication scenario, or to bring a database up to date after restoring table data from a backup. The binary logging feature can be turned on and off, although Oracle recommends always enabling it if you use replication or perform backups.

You can examine the contents of the binary log, or replay those statements during replication or recovery, by using the `mysqlbinlog` command. For full information about the binary log, see Section 5.4.4, “The Binary Log”. For MySQL configuration options related to the binary log, see Section 17.1.6.4, “Binary Logging Options and Variables”.

For the MySQL Enterprise Backup product, the file name of the binary log and the current position within the file are important details. To record this information for the master server when taking a backup in a replication context, you can specify the `--slave-info` option.

Prior to MySQL 5.0, a similar capability was available, known as the update log. In MySQL 5.0 and higher, the binary log replaces the update log.

See Also binlog, MySQL Enterprise Backup, replication.

binlog

An informal name for the binary log file. For example, you might see this abbreviation used in e-mail messages or forum discussions.
See Also binary log.

blind query expansion
A special mode of full-text search enabled by the WITH QUERY EXPANSION clause. It performs the search twice, where the search phrase for the second search is the original search phrase concatenated with the few most highly relevant documents from the first search. This technique is mainly applicable for short search phrases, perhaps only a single word. It can uncover relevant matches where the precise search term does not occur in the document.
See Also full-text search.

bottleneck
A portion of a system that is constrained in size or capacity, that has the effect of limiting overall throughput. For example, a memory area might be smaller than necessary; access to a single required resource might prevent multiple CPU cores from running simultaneously; or waiting for disk I/O to complete might prevent the CPU from running at full capacity. Removing bottlenecks tends to improve concurrency. For example, the ability to have multiple InnoDB buffer pool instances reduces contention when multiple sessions read from and write to the buffer pool simultaneously.
See Also buffer pool, concurrency.

bounce
A shutdown operation immediately followed by a restart. Ideally with a relatively short warmup period so that performance and throughput quickly return to a high level.
See Also shutdown.

buddy allocator
A mechanism for managing different-sized pages in the InnoDB buffer pool.
See Also buffer pool, page, page size.

buffer
A memory or disk area used for temporary storage. Data is buffered in memory so that it can be written to disk efficiently, with a few large I/O operations rather than many small ones. Data is buffered on disk for greater reliability, so that it can be recovered even when a crash or other failure occurs at the worst possible time. The main types of buffers used by InnoDB are the buffer pool, the doublewrite buffer, and the change buffer.
See Also buffer pool, change buffer, crash, doublewrite buffer.

buffer pool
The memory area that holds cached InnoDB data for both tables and indexes. For efficiency of high-volume read operations, the buffer pool is divided into pages that can potentially hold multiple rows. For efficiency of cache management, the buffer pool is implemented as a linked list of pages; data that is rarely used is aged out of the cache, using a variation of the LRU algorithm. On systems with large memory, you can improve concurrency by dividing the buffer pool into multiple buffer pool instances.

Several InnoDB status variables, INFORMATION_SCHEMA tables, and performance_schema tables help to monitor the internal workings of the buffer pool. Starting in MySQL 5.6, you can avoid a lengthy warmup period after restarting the server, particularly for instances with large buffer pools, by saving the buffer pool state at server shutdown and restoring the buffer pool to the same state at server startup. See Section 15.8.3.6, “Saving and Restoring the Buffer Pool State”.
See Also buffer pool instance, LRU, page, warm up.

buffer pool instance
Any of the multiple regions into which the buffer pool can be divided, controlled by the innodb_buffer_pool_instances configuration option. The total memory size specified by innodb_buffer_pool_size is divided among all buffer pool instances. Typically, having multiple buffer pool instances is appropriate for systems that allocate multiple gigabytes to the InnoDB buffer pool, with each instance being one gigabyte or larger. On systems loading or looking up large amounts of data in the buffer pool from many concurrent sessions, having multiple buffer pool instances reduces contention for exclusive access to data structures that manage the buffer pool.
See Also buffer pool.
The built-in InnoDB storage engine within MySQL is the original form of distribution for the storage engine. Contrast with the InnoDB Plugin. Starting with MySQL 5.5, the InnoDB Plugin is merged back into the MySQL code base as the built-in InnoDB storage engine (known as InnoDB 1.1).

This distinction is important mainly in MySQL 5.1, where a feature or bug fix might apply to the InnoDB Plugin but not the built-in InnoDB, or vice versa. See Also InnoDB.

Business rules

The relationships and sequences of actions that form the basis of business software, used to run a commercial company. Sometimes these rules are dictated by law, other times by company policy. Careful planning ensures that the relationships encoded and enforced by the database, and the actions performed through application logic, accurately reflect the real policies of the company and can handle real-life situations.

For example, an employee leaving a company might trigger a sequence of actions from the human resources department. The human resources database might also need the flexibility to represent data about a person who has been hired, but not yet started work. Closing an account at an online service might result in data being removed from a database, or the data might be moved or flagged so that it could be recovered if the account is re-opened. A company might establish policies regarding salary maximums, minimums, and adjustments, in addition to basic sanity checks such as the salary not being a negative number. A retail database might not allow a purchase with the same serial number to be returned more than once, or might not allow credit card purchases above a certain value, while a database used to detect fraud might allow these kinds of things.

See Also relational.

C

.cfg file

A metadata file used with the InnoDB transportable tablespace feature. It is produced by the command FLUSH TABLES ... FOR EXPORT, puts one or more tables in a consistent state that can be copied to another server. The .cfg file is copied along with the corresponding .ibd file, and used to adjust the internal values of the .ibd file, such as the space ID, during the ALTER TABLE ... IMPORT TABLESPACE step. See Also .ibd file, space ID, transportable tablespace.

cache

The general term for any memory area that stores copies of data for frequent or high-speed retrieval. In InnoDB, the primary kind of cache structure is the buffer pool. See Also buffer, buffer pool.

cardinality

The number of different values in a table column. When queries refer to columns that have an associated index, the cardinality of each column influences which access method is most efficient. For example, for a column with a unique constraint, the number of different values is equal to the number of rows in the table. If a table has a million rows but only 10 different values for a particular column, each value occurs (on average) 100,000 times. A query such as SELECT c1 FROM t1 WHERE c1 = 50; thus might return 1 row or a huge number of rows, and the database server might process the query differently depending on the cardinality of c1.

If the values in a column have a very uneven distribution, the cardinality might not be a good way to determine the best query plan. For example, SELECT c1 FROM t1 WHERE c1 = x; might return 1 row when x=50 and a million rows when x=30. In such a case, you might need to use index hints to pass along advice about which lookup method is more efficient for a particular query.

Cardinality can also apply to the number of distinct values present in multiple columns, as in a composite index. See Also column, composite index, index, index hint, persistent statistics, random dive, selectivity, unique constraint.
change buffer
A special data structure that records changes to pages in secondary indexes. These values could result from SQL INSERT, UPDATE, or DELETE statements (DML). The set of features involving the change buffer is known collectively as change buffering, consisting of insert buffering, delete buffering, and purge buffering.

Changes are only recorded in the change buffer when the relevant page from the secondary index is not in the buffer pool. When the relevant index page is brought into the buffer pool while associated changes are still in the change buffer, the changes for that page are applied in the buffer pool (merged) using the data from the change buffer. Periodically, the purge operation that runs during times when the system is mostly idle, or during a slow shutdown, writes the new index pages to disk. The purge operation can write the disk blocks for a series of index values more efficiently than if each value were written to disk immediately.

Physically, the change buffer is part of the system tablespace, so that the index changes remain buffered across database restarts. The changes are only applied (merged) when the pages are brought into the buffer pool due to some other read operation.

The kinds and amount of data stored in the change buffer are governed by the innodb_change_buffering and innodb_change_buffer_max_size configuration options. To see information about the current data in the change buffer, issue the SHOW ENGINE INNODB STATUS command.

Formerly known as the insert buffer.
See Also buffer pool, change buffering, delete buffering, DML, insert buffer, insert buffering, merge, page, purge, purge buffering, secondary index, system tablespace.

change buffering
The general term for the features involving the change buffer, consisting of insert buffering, delete buffering, and purge buffering. Index changes resulting from SQL statements, which could normally involve random I/O operations, are held back and performed periodically by a background thread. This sequence of operations can write the disk blocks for a series of index values more efficiently than if each value were written to disk immediately. Controlled by the innodb_change_buffering and innodb_change_buffer_max_size configuration options.
See Also change buffer, delete buffering, insert buffering, purge buffering.

checkpoint
As changes are made to data pages that are cached in the buffer pool, those changes are written to the data files sometime later, a process known as flushing. The checkpoint is a record of the latest changes (represented by an LSN value) that have been successfully written to the data files.
See Also buffer pool, data files, flush, fuzzy checkpointing, LSN.

checksum
In InnoDB, a validation mechanism to detect corruption when a page in a tablespace is read from disk into the InnoDB buffer pool. This feature is controlled by the innodb_checksums configuration option in MySQL 5.5. innodb_checksums is deprecated in MySQL 5.6.3, replaced by innodb_checksum_algorithm.

The innochecksum command helps diagnose corruption problems by testing the checksum values for a specified tablespace file while the MySQL server is shut down.

MySQL also uses checksums for replication purposes. For details, see the configuration options binlog_checksum, master_verify_checksum, and slave_sql_verify_checksum.
See Also buffer pool, page, tablespace.

child table
In a foreign key relationship, a child table is one whose rows refer (or point) to rows in another table with an identical value for a specific column. This is the table that contains the FOREIGN KEY ... REFERENCES clause and optionally ON UPDATE and ON DELETE clauses. The corresponding row in the parent table must exist before the row can be created in the child table. The values in the child table can prevent delete or update operations on the parent table, or can cause automatic deletion or updates in the child table, based on the ON CASCADE option used when creating the foreign key.
See Also foreign key, parent table.
clean page

A page in the InnoDB buffer pool where all changes made in memory have also been written (flushed) to the data files. The opposite of a dirty page.
See Also buffer pool, data files, dirty page, flush, page.

clean shutdown

A shutdown that completes without errors and applies all changes to InnoDB tables before finishing, as opposed to a crash or a fast shutdown. Synonym for slow shutdown.
See Also crash, fast shutdown, shutdown, slow shutdown.

client

A type of program that sends requests to a server, and interprets or processes the results. The client software might run only some of the time (such as a mail or chat program), and might run interactively (such as the mysql command processor).
See Also mysql, server.

clustered index

The InnoDB term for a primary key index. InnoDB table storage is organized based on the values of the primary key columns, to speed up queries and sorts involving the primary key columns. For best performance, choose the primary key columns carefully based on the most performance-critical queries. Because modifying the columns of the clustered index is an expensive operation, choose primary columns that are rarely or never updated.

In the Oracle Database product, this type of table is known as an index-organized table.
See Also index, primary key, secondary index.

cold backup

A backup taken while the database is shut down. For busy applications and websites, this might not be practical, and you might prefer a warm backup or a hot backup.
See Also backup, hot backup, warm backup.

column

A data item within a row, whose storage and semantics are defined by a data type. Each table and index is largely defined by the set of columns it contains.

Each column has a cardinality value. A column can be the primary key for its table, or part of the primary key. A column can be subject to a unique constraint, a NOT NULL constraint, or both. Values in different columns, even across different tables, can be linked by a foreign key relationship.

In discussions of MySQL internal operations, sometimes field is used as a synonym.
See Also cardinality, foreign key, index, NOT NULL constraint, primary key, row, table, unique constraint.

column index

An index on a single column.
See Also composite index, index.

column prefix

When an index is created with a length specification, such as CREATE INDEX idx ON t1 (c1(N)), only the first N characters of the column value are stored in the index. Keeping the index prefix small makes the index compact, and the memory and disk I/O savings help performance. (Although making the index prefix too small can hinder query optimization by making rows with different values appear to the query optimizer to be duplicates.)

For columns containing binary values or long text strings, where sorting is not a major consideration and storing the entire value in the index would waste space, the index automatically uses the first N (typically 768) characters of the value to do lookups and sorts.
See Also index.

commit

A SQL statement that ends a transaction, making permanent any changes made by the transaction. It is the opposite of rollback, which undoes any changes made in the transaction.
**InnoDB** uses an **optimistic** mechanism for commits, so that changes can be written to the data files before the commit actually occurs. This technique makes the commit itself faster, with the tradeoff that more work is required in case of a rollback.

By default, MySQL uses the **autocommit** setting, which automatically issues a commit following each SQL statement.

See Also **autocommit**, **optimistic**, **rollback**, **SQL**, **transaction**.

**compact row format**

A **row format** for InnoDB tables. It was the default row format from MySQL 5.0.3 to MySQL 5.7.8. In MySQL 8.0, the default row format is defined by the `innodb_default_row_format` configuration option, which has a default setting of **DYNAMIC**. The **COMPACT** row format provides a more compact representation for nulls and variable-length columns than the **RENDUNDANT** row format.

For additional information about **InnoDB COMPACT** row format, see Section 15.10, “InnoDB Row Formats”. See Also **dynamic row format**, **file format**, **redundant row format**, **row format**.

**composite index**

An **index** that includes multiple columns.

See Also **index**.

**compressed backup**

The compression feature of the **MySQL Enterprise Backup** product makes a compressed copy of each tablespace, changing the extension from `.ibd` to `.ibz`. Compressing backup data allows you to keep more backups on hand, and reduces the time to transfer backups to a different server. The data is uncompressed during the restore operation. When a compressed backup operation processes a table that is already compressed, it skips the compression step for that table, because compressing again would result in little or no space savings.

A set of files produced by the **MySQL Enterprise Backup** product, where each **tablespace** is compressed. The compressed files are renamed with a `.ibz` file extension.

Applying **compression** at the start of the backup process helps to avoid storage overhead during the compression process, and to avoid network overhead when transferring the backup files to another server. The process of applying the **binary log** takes longer, and requires uncompressing the backup files.

See Also **apply**, **binary log**, **compression**, **hot backup**, **MySQL Enterprise Backup**, **tablespace**.

**compressed row format**

A **row format** that enables data and index **compression** for InnoDB tables. Large fields are stored away from the page that holds the rest of the row data, as in **dynamic row format**. Both index pages and the large fields are compressed, yielding memory and disk savings. Depending on the structure of the data, the decrease in memory and disk usage might or might not outweigh the performance overhead of uncompressing the data as it is used. See Section 15.9, “InnoDB Table and Page Compression” for usage details.

For additional information about **InnoDB COMPRESSED** row format, see **DYNAMIC Row Format**. See Also **compression**, **dynamic row format**, **row format**.

**compressed table**

A table for which the data is stored in compressed form. For **InnoDB**, it is a table created with `ROW_FORMAT=COMPRESSED`. See Section 15.9, “InnoDB Table and Page Compression” for more information.

See Also **compressed row format**, **compression**.

**compression**

A feature with wide-ranging benefits from using less disk space, performing less I/O, and using less memory for caching.

**InnoDB** supports both table-level and page-level compression. **InnoDB** page compression is also referred to as **transparent page compression**. For more information about **InnoDB** compression, see Section 15.9, “InnoDB Table and Page Compression”.

---

6217
Another type of compression is the **compressed backup** feature of the **MySQL Enterprise Backup** product. See Also buffer pool, compressed backup, compressed row format, DML, transparent page compression.

**compression failure**

Not actually an error, rather an expensive operation that can occur when using **compression** in combination with **DML** operations. It occurs when: updates to a compressed **page** overflow the area on the page reserved for recording modifications; the page is compressed again, with all changes applied to the table data; the re-compressed data does not fit on the original page, requiring MySQL to split the data into two new pages and compress each one separately. To check the frequency of this condition, query the **INFORMATION_SCHEMA.INNODB_CMP** table and check how much the value of the **COMPRESS_OPS** column exceeds the value of the **COMPRESS_OPS_OK** column. Ideally, compression failures do not occur often; when they do, you can adjust the **innodb_compression_level**, **innodb_compression_failure_threshold_pct**, and **innodb_compression_pad_pct_max** configuration options.

See Also compression, DML, page.

**concatenated index**

See composite index.

**concurrency**

The ability of multiple operations (in database terminology, transactions) to run simultaneously, without interfering with each other. Concurrency is also involved with performance, because ideally the protection for multiple simultaneous transactions works with a minimum of performance overhead, using efficient mechanisms for locking.

See Also ACID, locking, transaction.

**configuration file**

The file that holds the option values used by MySQL at startup. Traditionally, on Linux and Unix this file is named **my.cnf**, and on Windows it is named **my.ini**. You can set a number of options related to InnoDB under the **[mysqld]** section of the file.

See Section 4.2.2.2, “Using Option Files” for information about where MySQL searches for configuration files.

When you use the **MySQL Enterprise Backup** product, you typically use two configuration files: one that specifies where the data comes from and how it is structured (which could be the original configuration file for your server), and a stripped-down one containing only a small set of options that specify where the backup data goes and how it is structured. The configuration files used with the **MySQL Enterprise Backup** product must contain certain options that are typically left out of regular configuration files, so you might need to add options to your existing configuration file for use with **MySQL Enterprise Backup**.

See Also **my.cnf**, MySQL Enterprise Backup, option, option file.

**consistent read**

A read operation that uses snapshot information to present query results based on a point in time, regardless of changes performed by other transactions running at the same time. If queried data has been changed by another transaction, the original data is reconstructed based on the contents of the undo log. This technique avoids some of the locking issues that can reduce concurrency by forcing transactions to wait for other transactions to finish.

With **REPEATABLE READ isolation level**, the snapshot is based on the time when the first read operation is performed. With **READ COMMITTED** isolation level, the snapshot is reset to the time of each consistent read operation.

Consistent read is the default mode in which InnoDB processes SELECT statements in **READ COMMITTED** and **REPEATABLE READ** isolation levels. Because a consistent read does not set any locks on the tables it accesses, other sessions are free to modify those tables while a consistent read is being performed on the table.

For technical details about the applicable isolation levels, see Section 15.7.2.3, “Consistent Nonlocking Reads”.

6218
See Also concurrency, isolation level, locking, READ COMMITTED, REPEATABLE READ, snapshot, transaction, undo log.

constraint
An automatic test that can block database changes to prevent data from becoming inconsistent. (In computer science terms, a kind of assertion related to an invariant condition.) Constraints are a crucial component of the ACID philosophy, to maintain data consistency. Constraints supported by MySQL include FOREIGN KEY constraints and unique constraints.
See Also ACID, foreign key, unique constraint.

counter
A value that is incremented by a particular kind of InnoDB operation. Useful for measuring how busy a server is, troubleshooting the sources of performance issues, and testing whether changes (for example, to configuration settings or indexes used by queries) have the desired low-level effects. Different kinds of counters are available through Performance Schema tables and INFORMATION_SCHEMA tables, particularly INFORMATION_SCHEMA.INNODB_METRICS.
See Also INFORMATION_SCHEMA, metrics counter, Performance Schema.

covering index
An index that includes all the columns retrieved by a query. Instead of using the index values as pointers to find the full table rows, the query returns values from the index structure, saving disk I/O. InnoDB can apply this optimization technique to more indexes than MyISAM can, because InnoDB secondary indexes also include the primary key columns. InnoDB cannot apply this technique for queries against tables modified by a transaction, until that transaction ends.

Any column index or composite index could act as a covering index, given the right query. Design your indexes and queries to take advantage of this optimization technique wherever possible.
See Also column index, composite index, index, primary key, secondary index.

CPU-bound
A type of workload where the primary bottleneck is CPU operations in memory. Typically involves read-intensive operations where the results can all be cached in the buffer pool.
See Also bottleneck, buffer pool, workload.

crash
MySQL uses the term “crash” to refer generally to any unexpected shutdown operation where the server cannot do its normal cleanup. For example, a crash could happen due to a hardware fault on the database server machine or storage device; a power failure; a potential data mismatch that causes the MySQL server to halt; a fast shutdown initiated by the DBA; or many other reasons. The robust, automatic crash recovery for InnoDB tables ensures that data is made consistent when the server is restarted, without any extra work for the DBA.
See Also crash recovery, fast shutdown, InnoDB, shutdown.

crash recovery
The cleanup activities that occur when MySQL is started again after a crash. For InnoDB tables, changes from incomplete transactions are replayed using data from the redo log. Changes that were committed before the crash, but not yet written into the data files, are reconstructed from the doublewrite buffer. When the database is shut down normally, this type of activity is performed during shutdown by the purge operation.

During normal operation, committed data can be stored in the change buffer for a period of time before being written to the data files. There is always a tradeoff between keeping the data files up-to-date, which introduces performance overhead during normal operation, and buffering the data, which can make shutdown and crash recovery take longer.
See Also change buffer, commit, crash, data files, doublewrite buffer, InnoDB, purge, redo log.

CRUD
Acronym for “create, read, update, delete”, a common sequence of operations in database applications. Often denotes a class of applications with relatively simple database usage (basic DDL, DML and query statements in SQL) that can be implemented quickly in any language.
See Also DDL, DML, query, SQL.
cursor
An internal data structure that is used to represent the result set of a query, or other operation that performs a search using an SQL WHERE clause. It works like an iterator in other high-level languages, producing each value from the result set as requested.

Although SQL usually handles the processing of cursors for you, you might delve into the inner workings when dealing with performance-critical code.
See Also query.

D

data definition language
See DDL.

data dictionary
Metadata that keeps track of database objects such as tables, indexes, and table columns. For the MySQL data dictionary, introduced in MySQL 8.0, metadata is physically located in InnoDB file-per-table tablespace files in the mysql database directory. For the InnoDB data dictionary, metadata is physically located in the InnoDB system tablespace.

Because the MySQL Enterprise Backup product always backs up the InnoDB system tablespace, all backups include the contents of the InnoDB data dictionary.
See Also column, file-per-table, .frm file, index, MySQL Enterprise Backup, system tablespace, table.

data directory
The directory under which each MySQL instance keeps the data files for InnoDB and the directories representing individual databases. Controlled by the datadir configuration option.
See Also data files, instance.

data files
The files that physically contain table and index data.

The InnoDB system tablespace, which holds the InnoDB data dictionary and is capable of holding data for multiple InnoDB tables, is represented by one or more .ibdata data files.

File-per-table tablespaces, which hold data for a single InnoDB table, are represented by a .ibd data file.

General tablespaces (introduced in MySQL 5.7.6), which can hold data for multiple InnoDB tables, are also represented by a .ibd data file.
See Also data dictionary, file-per-table, general tablespace, .ibd file, ibdata file, index, system tablespace, table, tablespace.

data manipulation language
See DML.

data warehouse
A database system or application that primarily runs large queries. The read-only or read-mostly data might be organized in denormalized form for query efficiency. Can benefit from the optimizations for read-only transactions in MySQL 5.6 and higher. Contrast with OLTP.
See Also denormalized, OLTP, query, read-only transaction.

datastore
Within the MySQL data directory, each database is represented by a separate directory. The InnoDB system tablespace, which can hold table data from multiple databases within a MySQL instance, is kept in data files that reside outside of individual database directories. When file-per-table mode is enabled, the .ibd files representing individual InnoDB tables are stored inside the database directories unless created elsewhere using the DATA DIRECTORY clause. General tablespaces, introduced in MySQL 5.7.6, also hold table data in .ibd files. Unlike file-per-table .ibd files, general tablespace .ibd files can hold table data from multiple databases within a MySQL instance, and can be assigned to directories relative to or independent of the MySQL data directory.
For long-time MySQL users, a database is a familiar notion. Users coming from an Oracle Database background will find that the MySQL meaning of a database is closer to what Oracle Database calls a schema.

See Also data files, file-per-table, .ibd file, instance, schema, system tablespace.

DCL

Data control language, a set of SQL statements for managing privileges. In MySQL, consists of the GRANT and REVOKE statements. Contrast with DDL and DML.

See Also DDL, DML, SQL.

DDL

Data definition language, a set of SQL statements for manipulating the database itself rather than individual table rows. Includes all forms of the CREATE, ALTER, and DROP statements. Also includes the TRUNCATE statement, because it works differently than a DELETE FROM table_name statement, even though the ultimate effect is similar.

DDL statements automatically commit the current transaction; they cannot be rolled back.

The InnoDB online DDL feature enhances performance for CREATE INDEX, DROP INDEX, and many types of ALTER TABLE operations. See Section 15.12, “InnoDB and Online DDL” for more information. Also, the InnoDB file-per-table setting can affect the behavior of DROP TABLE and TRUNCATE TABLE operations.

Contrast with DML and DCL.

See Also commit, DCL, DML, file-per-table, rollback, SQL, transaction.

deadlock

A situation where different transactions are unable to proceed, because each holds a lock that the other needs. Because both transactions are waiting for a resource to become available, neither will ever release the locks it holds.

A deadlock can occur when the transactions lock rows in multiple tables (through statements such as UPDATE or SELECT ... FOR UPDATE), but in the opposite order. A deadlock can also occur when such statements lock ranges of index records and gaps, with each transaction acquiring some locks but not others due to a timing issue.

For background information on how deadlocks are automatically detected and handled, see Section 15.7.5.2, “Deadlock Detection and Rollback”. For tips on avoiding and recovering from deadlock conditions, see Section 15.7.5.3, “How to Minimize and Handle Deadlocks”.

See Also gap, lock, transaction.

deadlock detection

A mechanism that automatically detects when a deadlock occurs, and automatically rolls back one of the transactions involved (the victim). Deadlock detection can be disabled using the innodb_deadlock_detect configuration option.

See Also deadlock, rollback, transaction, victim.

delete

When InnoDB processes a DELETE statement, the rows are immediately marked for deletion and no longer are returned by queries. The storage is reclaimed sometime later, during the periodic garbage collection known as the purge operation. For removing large quantities of data, related operations with their own performance characteristics are TRUNCATE and DROP.

See Also drop, purge, truncate.

delete buffering

The technique of storing changes to secondary index pages, resulting from DELETE operations, in the change buffer rather than writing the changes immediately, so that the physical writes can be performed to minimize random I/O. (Because delete operations are a two-step process, this operation buffers the write that normally marks an index record for deletion.) It is one of the types of change buffering; the others are insert buffering and purge buffering.
denormalized
A data storage strategy that duplicates data across different tables, rather than linking the tables with foreign keys and join queries. Typically used in data warehouse applications, where the data is not updated after loading. In such applications, query performance is more important than making it simple to maintain consistent data during updates. Contrast with normalized.
See Also data warehouse, foreign key, join, normalized.

descending index
A type of index where index storage is optimized to process ORDER BY column DESC clauses.
See Also index.

dictionary object cache
The dictionary object cache stores previously accessed data dictionary objects in memory to enable object reuse and minimize disk I/O. An LRU-based eviction strategy is used to evict least recently used objects from memory. The cache is comprised of several partitions that store different object types.
For more information, see Section 14.4, “Dictionary Object Cache”.
See Also data dictionary, LRU.

dirty page
A page in the InnoDB buffer pool that has been updated in memory, where the changes are not yet written (flushed) to the data files. The opposite of a clean page.
See Also buffer pool, clean page, data files, flush, page.

dirty read
An operation that retrieves unreliable data, data that was updated by another transaction but not yet committed. It is only possible with the isolation level known as read uncommitted.

This kind of operation does not adhere to the ACID principle of database design. It is considered very risky, because the data could be rolled back, or updated further before being committed; then, the transaction doing the dirty read would be using data that was never confirmed as accurate.

Its opposite is consistent read, where InnoDB ensures that a transaction does not read information updated by another transaction, even if the other transaction commits in the meantime.
See Also ACID, commit, consistent read, isolation level, READ UNCOMMITTED, rollback.

disk-based
A kind of database that primarily organizes data on disk storage (hard drives or equivalent). Data is brought back and forth between disk and memory to be operated upon. It is the opposite of an in-memory database. Although InnoDB is disk-based, it also contains features such as the buffer pool, multiple buffer pool instances, and the adaptive hash index that allow certain kinds of workloads to work primarily from memory.
See Also adaptive hash index, buffer pool, in-memory database.

disk-bound
A type of workload where the primary bottleneck is disk I/O. (Also known as I/O-bound.) Typically involves frequent writes to disk, or random reads of more data than can fit into the buffer pool.
See Also bottleneck, buffer pool, workload.

DML
Data manipulation language, a set of SQL statements for performing INSERT, UPDATE, and DELETE operations. The SELECT statement is sometimes considered as a DML statement, because the SELECT ... FOR UPDATE form is subject to the same considerations for locking as INSERT, UPDATE, and DELETE.

DML statements for an InnoDB table operate in the context of a transaction, so their effects can be committed or rolled back as a single unit.

Contrast with DDL and DCL.
See Also commit, DCL, DDL, locking, rollback, SQL, transaction.
document id

In the InnoDB full-text search feature, a special column in the table containing the FULLTEXT index, to uniquely identify the document associated with each ilist value. Its name is FTS_DOC_ID (uppercase required). The column itself must be of BIGINT UNSIGNED NOT NULL type, with a unique index named FTS_DOC_ID_INDEX. Preferably, you define this column when creating the table. If InnoDB must add the column to the table while creating a FULLTEXT index, the indexing operation is considerably more expensive. See Also full-text search, FULLTEXT index, ilist.

doublewrite buffer

InnoDB uses a file flush technique called doublewrite. Before writing pages to the data files, InnoDB first writes them to a storage area called the doublewrite buffer. Only after the write and the flush to the doublewrite buffer have completed, does InnoDB write the pages to their proper positions in the data file. If there is an operating system, storage subsystem, or mysql process crash in the middle of a page write, InnoDB can later find a good copy of the page from the doublewrite buffer during crash recovery.

Although data is always written twice, the doublewrite buffer does not require twice as much I/O overhead or twice as many I/O operations. Data is written to the buffer itself as a large sequential chunk, with a single fsync() call to the operating system.

To turn off the doublewrite buffer, specify the option innodb_doublewrite=0.
See Also crash recovery, data files, page, purge.

drop

A kind of DDL operation that removes a schema object, through a statement such as DROP TABLE or DROP INDEX. It maps internally to an ALTER TABLE statement. From an InnoDB perspective, the performance considerations of such operations involve the time that the data dictionary is locked to ensure that interrelated objects are all updated, and the time to update memory structures such as the buffer pool. For a table, the drop operation has somewhat different characteristics than a truncate operation (TRUNCATE TABLE statement).
See Also buffer pool, data dictionary, DDL, table, truncate.

dynamic row format

An InnoDB row format. Because long variable-length column values are stored outside of the page that holds the row data, it is very efficient for rows that include large objects. Since the large fields are typically not accessed to evaluate query conditions, they are not brought into the buffer pool as often, resulting in fewer I/O operations and better utilization of cache memory.

As of MySQL 5.7.9, the default row format is defined by innodb_default_row_format, which has a default value of DYNAMIC.

For additional information about InnoDB DYNAMIC row format, see DYNAMIC Row Format.
See Also buffer pool, file format, row format.

E

early adopter

A stage similar to beta, when a software product is typically evaluated for performance, functionality, and compatibility in a non-mission-critical setting.
See Also beta.

error log

A type of log showing information about MySQL startup and critical runtime errors and crash information. For details, see Section 5.4.2, “The Error Log”.
See Also crash, log.

eviction

The process of removing an item from a cache or other temporary storage area, such as the InnoDB buffer pool. Often, but not always, uses the LRU algorithm to determine which item to remove. When a dirty page is evicted, its contents are flushed to disk, and any dirty neighbor pages might be flushed also.
exclusive lock

A kind of lock that prevents any other transaction from locking the same row. Depending on the transaction isolation level, this kind of lock might block other transactions from writing to the same row, or might also block other transactions from reading the same row. The default InnoDB isolation level, REPEATABLE READ, enables higher concurrency by allowing transactions to read rows that have exclusive locks, a technique known as consistent read.
See Also concurrency, consistent read, isolation level, lock, REPEATABLE READ, shared lock, transaction.

extent

A group of pages within a tablespace. For the default page size of 16KB, an extent contains 64 pages. In MySQL 5.6, the page size for an InnoDB instance can be 4KB, 8KB, or 16KB, controlled by the innodb_page_size configuration option. For 4KB, 8KB, and 16KB pages sizes, the extent size is always 1MB (or 1048576 bytes).

Support for 32KB and 64KB InnoDB page sizes was added in MySQL 5.7.6. For a 32KB page size, the extent size is 2MB. For a 64KB page size, the extent size is 4MB.

InnoDB features such as segments, read-ahead requests and the doublewrite buffer use I/O operations that read, write, allocate, or free data one extent at a time.
See Also doublewrite buffer, page, page size, read-ahead, segment, tablespace.

Fast Index Creation

A capability first introduced in the InnoDB Plugin, now part of MySQL in 5.5 and higher, that speeds up creation of InnoDB secondary indexes by avoiding the need to completely rewrite the associated table. The speedup applies to dropping secondary indexes also.

Because index maintenance can add performance overhead to many data transfer operations, consider doing operations such as ALTER TABLE ... ENGINE=INNODB or INSERT INTO ... SELECT * FROM ... without any secondary indexes in place, and creating the indexes afterward.

In MySQL 5.6, this feature becomes more general. You can read and write to tables while an index is being created, and many more kinds of ALTER_TABLE operations can be performed without copying the table, without blocking DML operations, or both. Thus in MySQL 5.6 and higher, this set of features is referred to as online DDL rather than Fast Index Creation.

For related information, see Section 15.12, "InnoDB and Online DDL".
See Also DML, index, online DDL, secondary index.

fast shutdown

The default shutdown procedure for InnoDB, based on the configuration setting innodb_fast_shutdown=1. To save time, certain flush operations are skipped. This type of shutdown is safe during normal usage, because the flush operations are performed during the next startup, using the same mechanism as in crash recovery. In cases where the database is being shut down for an upgrade or downgrade, do a slow shutdown instead to ensure that all relevant changes are applied to the data files during the shutdown.
See Also crash recovery, data files, flush, shutdown, slow shutdown.

file format

The file format for InnoDB tables.
See Also file-per-table, .ibd file, ibdata file, row format.
file-per-table

A general name for the setting controlled by the `innodb_file_per_table` option, which is an important configuration option that affects aspects of InnoDB file storage, availability of features, and I/O characteristics. As of MySQL 5.6.7, `innodb_file_per_table` is enabled by default.

With the `innodb_file_per_table` option enabled, you can create a table in its own `.ibd` file rather than in the shared `ibdata` files of the system tablespace. When table data is stored in an individual `.ibd` file, you have more flexibility to choose row formats required for features such as data compression. The `TRUNCATE TABLE` operation is also faster, and reclaimed space can be used by the operating system rather than remaining reserved for InnoDB.

The MySQL Enterprise Backup product is more flexible for tables that are in their own files. For example, tables can be excluded from a backup, but only if they are in separate files. Thus, this setting is suitable for tables that are backed up less frequently or on a different schedule.

See Also compressed row format, compression, file format, `.ibd` file, `ibdata` file, `innodb_file_per_table`, MySQL Enterprise Backup, row format, system tablespace.

fill factor

In an InnoDB index, the proportion of a page that is taken up by index data before the page is split. The unused space when index data is first divided between pages allows for rows to be updated with longer string values without requiring expensive index maintenance operations. If the fill factor is too low, the index consumes more space than needed, causing extra I/O overhead when reading the index. If the fill factor is too high, any update that increases the length of column values can cause extra I/O overhead for index maintenance. See Section 15.6.2.2, “The Physical Structure of an InnoDB Index” for more information.

See Also index, page.

fixed row format

This row format is used by the MyISAM storage engine, not by InnoDB. If you create an InnoDB table with the option `ROW_FORMAT=FIXED` in MySQL 5.7.6 or earlier, InnoDB uses the compact row format instead, although the `FIXED` value might still show up in output such as `SHOW TABLE STATUS` reports. As of MySQL 5.7.7, InnoDB returns an error if `ROW_FORMAT=FIXED` is specified.

See Also compact row format, row format.

flush

To write changes to the database files, that had been buffered in a memory area or a temporary disk storage area. The InnoDB storage structures that are periodically flushed include the redo log, the undo log, and the buffer pool.

Flushing can happen because a memory area becomes full and the system needs to free some space, because a commit operation means the changes from a transaction can be finalized, or because a slow shutdown operation means that all outstanding work should be finalized. When it is not critical to flush all the buffered data at once, InnoDB can use a technique called fuzzy checkpointing to flush small batches of pages to spread out the I/O overhead.

See Also buffer pool, commit, fuzzy checkpointing, redo log, slow shutdown, undo log.

flush list

An internal InnoDB data structure that tracks dirty pages in the buffer pool: that is, pages that have been changed and need to be written back out to disk. This data structure is updated frequently by InnoDB internal mini-transactions, and so is protected by its own mutex to allow concurrent access to the buffer pool.

See Also buffer pool, dirty page, LRU, mini-transaction, mutex, page, page cleaner.

foreign key

A type of pointer relationship, between rows in separate InnoDB tables. The foreign key relationship is defined on one column in both the parent table and the child table.

In addition to enabling fast lookup of related information, foreign keys help to enforce referential integrity, by preventing any of these pointers from becoming invalid as data is inserted, updated, and deleted. This enforcement mechanism is a type of constraint. A row that points to another table cannot be inserted if the associated foreign key value does not exist in the other table. If a row is deleted or its foreign key value changed, and rows in another table point to that foreign key value, the foreign key can be set up to prevent
the deletion, cause the corresponding column values in the other table to become null, or automatically delete the corresponding rows in the other table.

One of the stages in designing a normalized database is to identify data that is duplicated, separate that data into a new table, and set up a foreign key relationship so that the multiple tables can be queried like a single table, using a join operation.

See Also child table, FOREIGN KEY constraint, join, normalized, NULL, parent table, referential integrity, relational.

FOREIGN KEY constraint
The type of constraint that maintains database consistency through a foreign key relationship. Like other kinds of constraints, it can prevent data from being inserted or updated if data would become inconsistent; in this case, the inconsistency being prevented is between data in multiple tables. Alternatively, when a DML operation is performed, FOREIGN KEY constraints can cause data in child rows to be deleted, changed to different values, or set to null, based on the ON CASCADE option specified when creating the foreign key.

See Also child table, constraint, DML, foreign key, NULL.

FTS
In most contexts, an acronym for full-text search. Sometimes in performance discussions, an acronym for full table scan.

See Also full table scan, full-text search.

full backup
A backup that includes all the tables in each MySQL database, and all the databases in a MySQL instance. Contrast with partial backup.

See Also backup, database, instance, partial backup, table.

table scan
An operation that requires reading the entire contents of a table, rather than just selected portions using an index. Typically performed either with small lookup tables, or in data warehousing situations with large tables where all available data is aggregated and analyzed. How frequently these operations occur, and the sizes of the tables relative to available memory, have implications for the algorithms used in query optimization and managing the buffer pool.

The purpose of indexes is to allow lookups for specific values or ranges of values within a large table, thus avoiding full table scans when practical.

See Also buffer pool, index.

full-text search
The MySQL feature for finding words, phrases, Boolean combinations of words, and so on within table data, in a faster, more convenient, and more flexible way than using the SQL LIKE operator or writing your own application-level search algorithm. It uses the SQL function MATCH() and FULLTEXT indexes.

See Also FULLTEXT index.

FULLTEXT index
The special kind of index that holds the search index in the MySQL full-text search mechanism. Represents the words from values of a column, omitting any that are specified as stopwords. Originally, only available for MyISAM tables. Starting in MySQL 5.6.4, it is also available for InnoDB tables.

See Also full-text search, index, InnoDB, search index, stopword.

fuzzy checkpointing
A technique that flushes small batches of dirty pages from the buffer pool, rather than flushing all dirty pages at once which would disrupt database processing.

See Also buffer pool, dirty page, flush.

G

GA
“Generally available”, the stage when a software product leaves beta and is available for sale, official support, and production use.
gap
A place in an InnoDB index data structure where new values could be inserted. When you lock a set of rows with a statement such as SELECT ... FOR UPDATE, InnoDB can create locks that apply to the gaps as well as the actual values in the index. For example, if you select all values greater than 10 for update, a gap lock prevents another transaction from inserting a new value that is greater than 10. The supremum record and infimum record represent the gaps containing all values greater than or less than all the current index values.

See Also concurrency, gap lock, index, infimum record, isolation level, supremum record.

gap lock
A lock on a gap between index records, or a lock on the gap before the first or after the last index record. For example, SELECT c1 FROM t WHERE c1 BETWEEN 10 and 20 FOR UPDATE; prevents other transactions from inserting a value of 15 into the column t.c1, whether or not there was already any such value in the column, because the gaps between all existing values in the range are locked. Contrast with record lock and next-key lock.

Gap locks are part of the tradeoff between performance and concurrency, and are used in some transaction isolation levels and not others.

See Also gap, infimum record, lock, next-key lock, record lock, supremum record.

general log
See general query log.

general query log
A type of log used for diagnosis and troubleshooting of SQL statements processed by the MySQL server. Can be stored in a file or in a database table. You must enable this feature through the general_log configuration option to use it. You can disable it for a specific connection through the sql_log_off configuration option.

Records a broader range of queries than the slow query log. Unlike the binary log, which is used for replication, the general query log contains SELECT statements and does not maintain strict ordering. For more information, see Section 5.4.3, “The General Query Log”.

See Also binary log, log, slow query log.

general tablespace
A shared InnoDB tablespace created using CREATE TABLESPACE syntax. General tablespaces can be created outside of the MySQL data directory, are capable of holding multiple tables, and support tables of all row formats. General tablespaces were introduced in MySQL 5.7.6.

Tables are added to a general tablespace using CREATE TABLE tbl_name ... TABLESPACE [=] tablespace_name or ALTER TABLE tbl_name TABLESPACE [=] tablespace_name syntax.

Contrast with system tablespace and file-per-table tablespace.

For more information, see Section 15.6.3.3, “General Tablespaces”.

See Also file-per-table, system tablespace, table, tablespace.

generated column
A column whose values are computed from an expression included in the column definition. A generated column can be virtual or stored.

See Also base column, stored generated column, virtual generated column.

generated stored column
See stored generated column.

generated virtual column
See virtual generated column.
global temporary tablespace
A temporary tablespace that stores rollback segments for changes made to user-created temporary tables.
See Also temporary tablespace.

global transaction
A type of transaction involved in XA operations. It consists of several actions that are transactional in themselves, but that all must either complete successfully as a group, or all be rolled back as a group. In essence, this extends ACID properties “up a level” so that multiple ACID transactions can be executed in concert as components of a global operation that also has ACID properties.
See Also ACID, transaction, XA.

group commit
An InnoDB optimization that performs some low-level I/O operations (log write) once for a set of commit operations, rather than flushing and syncing separately for each commit.
See Also binary log, commit.

H

hash index
A type of index intended for queries that use equality operators, rather than range operators such as greater-than or BETWEEN. It is available for MEMORY tables. Although hash indexes are the default for MEMORY tables for historic reasons, that storage engine also supports B-tree indexes, which are often a better choice for general-purpose queries.

MySQL includes a variant of this index type, the adaptive hash index, that is constructed automatically for InnoDB tables if needed based on runtime conditions.
See Also adaptive hash index, B-tree, index, InnoDB.

HDD
Acronym for “hard disk drive”. Refers to storage media using spinning platters, usually when comparing and contrasting with SSD. Its performance characteristics can influence the throughput of a disk-based workload.
See Also disk-based, SSD.

heartbeat
A periodic message that is sent to indicate that a system is functioning properly. In a replication context, if the master stops sending such messages, one of the slaves can take its place. Similar techniques can be used between the servers in a cluster environment, to confirm that all of them are operating properly.
See Also master server, replication.

high-water mark
A value representing an upper limit, either a hard limit that should not be exceeded at runtime, or a record of the maximum value that was actually reached. Contrast with low-water mark.
See Also low-water mark.

history list
A list of transactions with delete-marked records scheduled to be processed by the InnoDB purge operation. Recorded in the undo log. The length of the history list is reported by the command SHOW ENGINE INNODB STATUS. If the history list grows longer than the value of the innodb_max_purge_lag configuration option, each DML operation is delayed slightly to allow the purge operation to finish flushing the deleted records.

Also known as purge lag.
See Also DML, flush, purge, purge lag, rollback segment, transaction, undo log.

hole punching
Releasing empty blocks from a page. The InnoDB transparent page compression feature relies on hole punching support. For more information, see Section 15.9.2, “InnoDB Page Compression”.
See Also sparse file, transparent page compression.
hot
A condition where a row, table, or internal data structure is accessed so frequently, requiring some form of locking or mutual exclusion, that it results in a performance or scalability issue.

Although “hot” typically indicates an undesirable condition, a hot backup is the preferred type of backup. See Also hot backup.

hot backup
A backup taken while the database is running and applications are reading and writing to it. The backup involves more than simply copying data files: it must include any data that was inserted or updated while the backup was in process; it must exclude any data that was deleted while the backup was in process; and it must ignore any changes that were not committed.

The Oracle product that performs hot backups, of InnoDB tables especially but also tables from MyISAM and other storage engines, is known as MySQL Enterprise Backup.

The hot backup process consists of two stages. The initial copying of the data files produces a raw backup. The apply step incorporates any changes to the database that happened while the backup was running. Applying the changes produces a prepared backup; these files are ready to be restored whenever necessary. See Also apply, MySQL Enterprise Backup, prepared backup, raw backup.

.ibd file
The data file for file-per-table tablespaces and general tablespaces. File-per-table tablespace .ibd files contain a single table and associated index data. General tablespace .ibd files may contain table and index data for multiple tables.

The .ibd file extension does not apply to the system tablespace, which consists of one or more ibdata files.

If a file-per-table tablespace or general tablespace is created with the DATA DIRECTORY = clause, the .ibd file is located at the specified path, outside the normal data directory.

When a .ibd file is included in a compressed backup by the MySQL Enterprise Backup product, the compressed equivalent is a .ibz file.
See Also database, file-per-table, general tablespace, ibdata file, .ibd file, innodb_file_per_table, MySQL Enterprise Backup, system tablespace.

.ibz file
When the MySQL Enterprise Backup product performs a compressed backup, it transforms each tablespace file that is created using the file-per-table setting from a .ibd extension to a .ibz extension.

The compression applied during backup is distinct from the compressed row format that keeps table data compressed during normal operation. A compressed backup operation skips the compression step for a tablespace that is already in compressed row format, as compressing a second time would slow down the backup but produce little or no space savings.

See Also compressed backup, compressed row format, file-per-table, .ibd file, MySQL Enterprise Backup, tablespace.

I/O-bound
See disk-bound.

ib-file set
The set of files managed by InnoDB within a MySQL database: the system tablespace, file-per-table tablespace files, and redo log files. Depending on MySQL version and InnoDB configuration, may also include general tablespace, temporary tablespace, and undo tablespace files. This term is sometimes used in detailed discussions of InnoDB file structures and formats to refer to the set of files managed by InnoDB within a MySQL database.
See Also database, file-per-table, general tablespace, redo log, system tablespace, temporary tablespace, undo tablespace.

ibbackup_logfile
A supplemental backup file created by the MySQL Enterprise Backup product during a hot backup operation. It contains information about any data changes that occurred while the backup was running. The initial backup files, including ibbackup_logfile, are known as a raw backup, because the changes that occurred during the backup operation are not yet incorporated. After you perform the apply step to the raw backup files, the resulting files do include those final data changes, and are known as a prepared backup. At this stage, the ibbackup_logfile file is no longer necessary. See Also apply, hot backup, MySQL Enterprise Backup, prepared backup, raw backup.

ibdata file
A set of files with names such as ibdata1, ibdata2, and so on, that make up the InnoDB system tablespace. These files contain metadata about InnoDB tables, (the InnoDB data dictionary), and the storage areas for one or more undo logs, the change buffer, and the doublewrite buffer. They also can contain some or all of the table data also (depending on whether the file-per-table mode is in effect when each table is created). When the innodb_file_per_table option is enabled, data and indexes for newly created tables are stored in separate .ibd files rather than in the system tablespace.

The growth of the ibdata files is influenced by the innodb_autoextend_increment configuration option. See Also change buffer, data dictionary, doublewrite buffer, file-per-table, .ibd file, innodb_file_per_table, system tablespace, undo log.

ibtmp file
The InnoDB temporary tablespace data file for non-compressed InnoDB temporary tables and related objects. The configuration file option, innodb_temp_data_file_path, allows users to define a relative path for the temporary tablespace data file. If innodb_temp_data_file_path is not specified, the default behavior is to create a single auto-extending 12MB data file named ibtmp1 in the data directory, alongside ibdata1.

See Also data files, temporary table, temporary tablespace.

ib_logfile
A set of files, typically named ib_logfile0 and ib_logfile1, that form the redo log. Also sometimes referred to as the log group. These files record statements that attempt to change data in InnoDB tables. These statements are replayed automatically to correct data written by incomplete transactions, on startup following a crash.

This data cannot be used for manual recovery; for that type of operation, use the binary log. See Also binary log, log group, redo log.

ilist
Within an InnoDB FULLTEXT index, the data structure consisting of a document ID and positional information for a token (that is, a particular word).
See Also FULLTEXT index.

implicit row lock
A row lock that InnoDB acquires to ensure consistency, without you specifically requesting it. See Also row lock.

in-memory database
A type of database system that maintains data in memory, to avoid overhead due to disk I/O and translation between disk blocks and memory areas. Some in-memory databases sacrifice durability (the “D” in the ACID design philosophy) and are vulnerable to hardware, power, and other types of failures, making them more suitable for read-only operations. Other in-memory databases do use durability mechanisms such as logging changes to disk or using non-volatile memory.

MySQL features that address the same kinds of memory-intensive processing include the InnoDB buffer pool, adaptive hash index, and read-only transaction optimization, the MEMORY storage engine, the MyISAM key cache, and the MySQL query cache.
See Also ACID, adaptive hash index, buffer pool, disk-based, read-only transaction.

incremental backup

A type of hot backup, performed by the MySQL Enterprise Backup product, that only saves data changed since some point in time. Having a full backup and a succession of incremental backups lets you reconstruct backup data over a long period, without the storage overhead of keeping several full backups on hand. You can restore the full backup and then apply each of the incremental backups in succession, or you can keep the full backup up-to-date by applying each incremental backup to it, then perform a single restore operation.

The granularity of changed data is at the page level. A page might actually cover more than one row. Each changed page is included in the backup.
See Also hot backup, MySQL Enterprise Backup, page.

index

A data structure that provides a fast lookup capability for rows of a table, typically by forming a tree structure (B-tree) representing all the values of a particular column or set of columns.

InnoDB tables always have a clustered index representing the primary key. They can also have one or more secondary indexes defined on one or more columns. Depending on their structure, secondary indexes can be classified as partial, column, or composite indexes.

Indexes are a crucial aspect of query performance. Database architects design tables, queries, and indexes to allow fast lookups for data needed by applications. The ideal database design uses a covering index where practical; the query results are computed entirely from the index, without reading the actual table data. Each foreign key constraint also requires an index, to efficiently check whether values exist in both the parent and child tables.

Although a B-tree index is the most common, a different kind of data structure is used for hash indexes, as in the MEMORY storage engine and the InnoDB adaptive hash index. R-tree indexes are used for spatial indexing of multi-dimensional information.
See Also adaptive hash index, B-tree, child table, clustered index, column index, composite index, covering index, foreign key, hash index, parent table, partial index, primary key, query, R-tree, row, secondary index, table.

index cache

A memory area that holds the token data for InnoDB full-text search. It buffers the data to minimize disk I/O when data is inserted or updated in columns that are part of a FULLTEXT index. The token data is written to disk when the index cache becomes full. Each InnoDB FULLTEXT index has its own separate index cache, whose size is controlled by the configuration option innodb_ft_cache_size.
See Also full-text search, FULLTEXT index.

index condition pushdown

Index condition pushdown (ICP) is an optimization that pushes part of a WHERE condition down to the storage engine if parts of the condition can be evaluated using fields from the index. ICP can reduce the number of times the storage engine must access the base table and the number of times the MySQL server must access the storage engine. For more information, see Section 8.2.1.6, “Index Condition Pushdown Optimization”.
See Also index, storage engine.

index hint

Extended SQL syntax for overriding the indexes recommended by the optimizer. For example, the FORCE INDEX, USE INDEX, and IGNORE INDEX clauses. Typically used when indexed columns have unevenly distributed values, resulting in inaccurate cardinality estimates.
See Also cardinality, index.

index prefix

In an index that applies to multiple columns (known as a composite index), the initial or leading columns of the index. A query that references the first 1, 2, 3, and so on columns of a composite index can use the index, even if the query does not reference all the columns in the index.
See Also composite index, index.

index statistics
See statistics.

infimum record
A pseudo-record in an index, representing the gap below the smallest value in that index. If a transaction has a statement such as SELECT ... FROM ... WHERE col < 10 FOR UPDATE;, and the smallest value in the column is 5, it is a lock on the infimum record that prevents other transactions from inserting even smaller values such as 0, -10, and so on.
See Also gap, index, pseudo-record, supremum record.

INFORMATION_SCHEMA
The name of the database that provides a query interface to the MySQL data dictionary. (This name is defined by the ANSI SQL standard.) To examine information (metadata) about the database, you can query tables such as INFORMATION_SCHEMA.TABLES and INFORMATION_SCHEMA.COLUMNS, rather than using SHOW commands that produce unstructured output.

The INFORMATION_SCHEMA database also contains tables specific to InnoDB that provide a query interface to the InnoDB data dictionary. You use these tables not to see how the database is structured, but to get real-time information about the workings of InnoDB tables to help with performance monitoring, tuning, and troubleshooting.
See Also data dictionary, database, InnoDB.

InnoDB
A MySQL component that combines high performance with transactional capability for reliability, robustness, and concurrent access. It embodies the ACID design philosophy. Represented as a storage engine; it handles tables created or altered with the ENGINE=INNODB clause. See Chapter 15, The InnoDB Storage Engine for architectural details and administration procedures, and Section 8.5, "Optimizing for InnoDB Tables" for performance advice.

In MySQL 5.5 and higher, InnoDB is the default storage engine for new tables and the ENGINE=INNODB clause is not required.

InnoDB tables are ideally suited for hot backups. See Section 30.2, "MySQL Enterprise Backup Overview" for information about the MySQL Enterprise Backup product for backing up MySQL servers without interrupting normal processing.
See Also ACID, hot backup, MySQL Enterprise Backup, storage engine, transaction.

innodb_autoinc_lock_mode
The innodb_autoinc_lock_mode option controls the algorithm used for auto-increment locking. When you have an auto-incrementing primary key, you can use statement-based replication only with the setting innodb_autoinc_lock_mode=1. This setting is known as consecutive lock mode, because multi-row inserts within a transaction receive consecutive auto-increment values. If you have innodb_autoinc_lock_mode=2, which allows higher concurrency for insert operations, use row-based replication rather than statement-based replication. This setting is known as interleaved lock mode, because multiple multi-row insert statements running at the same time can receive auto-increment values that are interleaved. The setting innodb_autoinc_lock_mode=0 should not be used except for compatibility purposes.

Consecutive lock mode (innodb_autoinc_lock_mode=1) is the default setting prior to MySQL 8.0.3. As of MySQL 8.0.3, interleaved lock mode (innodb_autoinc_lock_mode=2) is the default, which reflects the change from statement-based to row-based replication as the default replication type.
See Also auto-increment, auto-increment locking, mixed-mode insert, primary key.

innodb_file_per_table
An important configuration option that affects many aspects of InnoDB file storage, availability of features, and I/O characteristics. In MySQL 5.6.7 and higher, it is enabled by default. The innodb_file_per_table option turns on file-per-table mode. With this mode enabled, a newly created InnoDB table and associated indexes can be stored in a file-per-table .ibd file, outside the system tablespace.
This option affects the performance and storage considerations for a number of SQL statements, such as `DROP TABLE` and `TRUNCATE TABLE`.

Enabling the `innodb_file_per_table` option allows you to take advantage of features such as table compression and named-table backups in MySQL Enterprise Backup.

For more information, see `innodb_file_per_table`, and Section 15.6.3.2, “File-Per-Table Tablespaces”. See Also compression, file-per-table, .ibd file, MySQL Enterprise Backup, system tablespace.

`innodb_lock_wait_timeout`

The `innodb_lock_wait_timeout` option sets the balance between waiting for shared resources to become available, or giving up and handling the error, retrying, or doing alternative processing in your application. Rolls back any InnoDB transaction that waits more than a specified time to acquire a lock. Especially useful if deadlocks are caused by updates to multiple tables controlled by different storage engines; such deadlocks are not detected automatically.

See Also deadlock, deadlock detection, lock, wait.

`innodb_strict_mode`

The `innodb_strict_mode` option controls whether InnoDB operates in strict mode, where conditions that are normally treated as warnings, cause errors instead (and the underlying statements fail).

See Also strict mode.

insert

One of the primary DML operations in SQL. The performance of inserts is a key factor in data warehouse systems that load millions of rows into tables, and OLTP systems where many concurrent connections might insert rows into the same table, in arbitrary order. If insert performance is important to you, you should learn about InnoDB features such as the `insert buffer` used in change buffering, and `auto-increment` columns.

See Also auto-increment, change buffering, data warehouse, DML, InnoDB, insert buffer, OLTP, SQL.

`insert buffer`

The former name of the `change buffer`. In MySQL 5.5, support was added for buffering changes to secondary index pages for `DELETE` and `UPDATE` operations. Previously, only changes resulting from `INSERT` operations were buffered. The preferred term is now `change buffer`.

See Also change buffer, change buffering.

`insert buffering`

The technique of storing changes to secondary index pages, resulting from `INSERT` operations, in the `change buffer` rather than writing the changes immediately, so that the physical writes can be performed to minimize random I/O. It is one of the types of change buffering; the others are delete buffering and purge buffering.

Insert buffering is not used if the secondary index is unique, because the uniqueness of new values cannot be verified before the new entries are written out. Other kinds of change buffering do work for unique indexes.

See Also change buffer, change buffering, delete buffering, insert buffer, purge buffering, unique index.

`insert intention lock`

A type of gap lock that is set by `INSERT` operations prior to row insertion. This type of lock signals the intent to insert in such a way that multiple transactions inserting into the same index gap need not wait for each other if they are not inserting at the same position within the gap. For more information, see Section 15.7.1, “InnoDB Locking”.

See Also gap lock, lock, next-key lock.

`instance`

A single `mysqld` daemon managing a `data directory` representing one or more databases with a set of tables. It is common in development, testing, and some replication scenarios to have multiple instances on the same server machine, each managing its own data directory and listening on its own port or socket. With one instance running a disk-bound workload, the server might still have extra CPU and memory capacity to run additional instances.

See Also data directory, database, disk-bound, mysqld, replication, server, table.
instrumentation

Modifications at the source code level to collect performance data for tuning and debugging. In MySQL, data collected by instrumentation is exposed through an SQL interface using the INFORMATION_SCHEMA and PERFORMANCE_SCHEMA databases.
See Also INFORMATION_SCHEMA, Performance Schema.

intention exclusive lock
See intention lock.

intention lock
A kind of lock that applies to the table, used to indicate the kind of lock the transaction intends to acquire on rows in the table. Different transactions can acquire different kinds of intention locks on the same table, but the first transaction to acquire an intention exclusive (IX) lock on a table prevents other transactions from acquiring any S or X locks on the table. Conversely, the first transaction to acquire an intention shared (IS) lock on a table prevents other transactions from acquiring any X locks on the table. The two-phase process allows the lock requests to be resolved in order, without blocking locks and corresponding operations that are compatible. For more information about this locking mechanism, see Section 15.7.1, “InnoDB Locking”.
See Also lock, lock mode, locking, transaction.

intention shared lock
See intention lock.

intrinsic temporary table
An optimized internal InnoDB temporary table used by the optimizer.
See Also optimizer.

inverted index
A data structure optimized for document retrieval systems, used in the implementation of InnoDB full-text search. The InnoDB FULLTEXT index, implemented as an inverted index, records the position of each word within a document, rather than the location of a table row. A single column value (a document stored as a text string) is represented by many entries in the inverted index.
See Also full-text search, FULLTEXT index, ilist.

IOPS
Acronym for I/O operations per second. A common measurement for busy systems, particularly OLTP applications. If this value is near the maximum that the storage devices can handle, the application can become disk-bound, limiting scalability.
See Also disk-bound, OLTP, scalability.

isolation level
One of the foundations of database processing. Isolation is the I in the acronym ACID; the isolation level is the setting that fine-tunes the balance between performance and reliability, consistency, and reproducibility of results when multiple transactions are making changes and performing queries at the same time.

From highest amount of consistency and protection to the least, the isolation levels supported by InnoDB are: SERIALizable, REPEATable READ, READ COMMITted, and READ UNCOMMITTED.

With InnoDB tables, many users can keep the default isolation level (REPEATable READ) for all operations. Expert users might choose the READ COMMITTED level as they push the boundaries of scalability with OLTP processing, or during data warehousing operations where minor inconsistencies do not affect the aggregate results of large amounts of data. The levels on the edges (SERIALizable and READ UNCOMMITTED) change the processing behavior to such an extent that they are rarely used.
See Also ACID, OLTP, READ COMMITted, READ UNCOMMITTED, REPEATable READ, SERIALizable, transaction.

J

join
A query that retrieves data from more than one table, by referencing columns in the tables that hold identical values. Ideally, these columns are part of an InnoDB foreign key relationship, which ensures referential
integrity and that the join columns are indexed. Often used to save space and improve query performance by replacing repeated strings with numeric IDs, in a normalized data design.
See Also foreign key, index, normalized, query, referential integrity.

K

KEY_BLOCK_SIZE
An option to specify the size of data pages within an InnoDB table that uses compressed row format. The default is 8 kilobytes. Lower values risk hitting internal limits that depend on the combination of row size and compression percentage.

For MyISAM tables, KEY_BLOCK_SIZE optionally specifies the size in bytes to use for index key blocks. The value is treated as a hint; a different size could be used if necessary. A KEY_BLOCK_SIZE value specified for an individual index definition overrides a table-level KEY_BLOCK_SIZE value.
See Also compressed row format.

L

latch
A lightweight structure used by InnoDB to implement a lock for its own internal memory structures, typically held for a brief time measured in milliseconds or microseconds. A general term that includes both mutexes (for exclusive access) and rw-locks (for shared access). Certain latches are the focus of InnoDB performance tuning. Statistics about latch use and contention are available through the Performance Schema interface.
See Also lock, locking, mutex, Performance Schema, rw-lock.

list
The InnoDB buffer pool is represented as a list of memory pages. The list is reordered as new pages are accessed and enter the buffer pool, as pages within the buffer pool are accessed again and are considered newer, and as pages that are not accessed for a long time are evicted from the buffer pool. The buffer pool is divided into sublists, and the replacement policy is a variation of the familiar LRU technique.
See Also buffer pool, eviction, LRU, page, sublist.

lock
The high-level notion of an object that controls access to a resource, such as a table, row, or internal data structure, as part of a locking strategy. For intensive performance tuning, you might delve into the actual structures that implement locks, such as mutexes and latches.
See Also latch, lock mode, locking, mutex.

lock escalation
An operation used in some database systems that converts many row locks into a single table lock, saving memory space but reducing concurrent access to the table. InnoDB uses a space-efficient representation for row locks, so that lock escalation is not needed.
See Also locking, row lock, table lock.

lock mode
A shared (S) lock allows a transaction to read a row. Multiple transactions can acquire an S lock on that same row at the same time.

An exclusive (X) lock allows a transaction to update or delete a row. No other transaction can acquire any kind of lock on that same row at the same time.

Intention locks apply to the table, and are used to indicate what kind of lock the transaction intends to acquire on rows in the table. Different transactions can acquire different kinds of intention locks on the same table, but the first transaction to acquire an intention exclusive (IX) lock on a table prevents other transactions from acquiring any S or X locks on the table. Conversely, the first transaction to acquire an intention shared (IS) lock on a table prevents other transactions from acquiring any X locks on the table. The two-phase process allows the lock requests to be resolved in order, without blocking locks and corresponding operations that are compatible.
locking

The system of protecting a transaction from seeing or changing data that is being queried or changed by other transactions. The locking strategy must balance reliability and consistency of database operations (the principles of the ACID philosophy) against the performance needed for good concurrency. Fine-tuning the locking strategy often involves choosing an isolation level and ensuring all your database operations are safe and reliable for that isolation level.

See Also ACID, concurrency, isolation level, locking, transaction.

locking read

A \texttt{SELECT} statement that also performs a locking operation on an InnoDB table. Either \texttt{SELECT \ldots \ FOR \ UPDATE} or \texttt{SELECT \ldots \ LOCK \ IN \ SHARE \ MODE}. It has the potential to produce a deadlock, depending on the isolation level of the transaction. The opposite of a non-locking read. Not allowed for global tables in a read-only transaction.

\texttt{SELECT \ldots \ FOR \ SHARE} replaces \texttt{SELECT \ldots \ LOCK \ IN \ SHARE \ MODE} in MySQL 8.0.1, but \texttt{LOCK \ IN \ SHARE \ MODE} remains available for backward compatibility.

See Section 15.7.2.4, “Locking Reads”.

See Also deadlock, isolation level, locking, non-locking read, read-only transaction.

log

In the InnoDB context, “log” or “log files” typically refers to the redo log represented by the \texttt{ib_logfile\text{n}} files. Another type of InnoDB log is the undo log, which is a storage area that holds copies of data modified by active transactions.

Other kinds of logs that are important in MySQL are the error log (for diagnosing startup and runtime problems), binary log (for working with replication and performing point-in-time restores), the general query log (for diagnosing application problems), and the slow query log (for diagnosing performance problems).

See Also binary log, error log, general query log, ib_logfile, redo log, slow query log, undo log.

log buffer

The memory area that holds data to be written to the log files that make up the redo log. It is controlled by the \texttt{innodb_log_buffer_size} configuration option.

See Also log file, redo log.

log file

One of the \texttt{ib_logfile\text{n}} files that make up the redo log. Data is written to these files from the log buffer memory area.

See Also ib_logfile, log buffer, redo log.

log group

The set of files that make up the redo log, typically named \texttt{ib_logfile0} and \texttt{ib_logfile1}. (For that reason, sometimes referred to collectively as \texttt{ib_logfile}.)

See Also ib_logfile, redo log.

logical

A type of operation that involves high-level, abstract aspects such as tables, queries, indexes, and other SQL concepts. Typically, logical aspects are important to make database administration and application development convenient and usable. Contrast with physical.

See Also logical backup, physical.

logical backup

A backup that reproduces table structure and data, without copying the actual data files. For example, the \texttt{mysqldump} command produces a logical backup, because its output contains statements such as \texttt{CREATE TABLE} and \texttt{INSERT} that can re-create the data. Contrast with physical backup. A logical backup offers flexibility (for example, you could edit table definitions or insert statements before restoring), but can take substantially longer to restore than a physical backup.
See Also `backup`, `mysqldump`, `physical backup`, `restore`.

**loose**
A prefix added to `InnoDB` configuration options after server `startup`, so any new configuration options not recognized by the current level of MySQL do not cause a startup failure. MySQL processes configuration options that start with this prefix, but gives a warning rather than a failure if the part after the prefix is not a recognized option.
See Also `startup`.

**low-water mark**
A value representing a lower limit, typically a threshold value at which some corrective action begins or becomes more aggressive. Contrast with `high-water mark`.
See Also `high-water mark`.

**LRU**
An acronym for "least recently used", a common method for managing storage areas. The items that have not been used recently are evicted when space is needed to cache newer items. InnoDB uses the LRU mechanism by default to manage the pages within the `buffer pool`, but makes exceptions in cases where a page might be read only a single time, such as during a full table scan. This variation of the LRU algorithm is called the midpoint insertion strategy. For more information, see Section 15.5.1, "Buffer Pool".
See Also `buffer pool`, `eviction`, `full table scan`, midpoint insertion strategy, `page`.

**LSN**
Acronym for "log sequence number". This arbitrary, ever-increasing value represents a point in time corresponding to operations recorded in the redo log. (This point in time is regardless of transaction boundaries; it can fall in the middle of one or more transactions.) It is used internally by InnoDB during crash recovery and for managing the `buffer pool`.

Prior to MySQL 5.6.3, the LSN was a 4-byte unsigned integer. The LSN became an 8-byte unsigned integer in MySQL 5.6.3 when the redo log file size limit increased from 4GB to 512GB, as additional bytes were required to store extra size information. Applications built on MySQL 5.6.3 or later that use LSN values should use 64-bit rather than 32-bit variables to store and compare LSN values.

In the MySQL Enterprise Backup product, you can specify an LSN to represent the point in time from which to take an incremental backup. The relevant LSN is displayed by the output of the `mysqlbackup` command. Once you have the LSN corresponding to the time of a full backup, you can specify that value to take a subsequent incremental backup, whose output contains another LSN for the next incremental backup.
See Also `buffer pool`, crash recovery, incremental backup, MySQL Enterprise Backup, redo log, transaction.

**M**

**.MRG file**
A file containing references to other tables, used by the `MERGE` storage engine. Files with this extension are always included in backups produced by the `mysqlbackup` command of the MySQL Enterprise Backup product.
See Also `MySQL Enterprise Backup`, `mysqlbackup command`.

**.MYD file**
A file that MySQL uses to store data for a `MyISAM` table.
See Also `.MYI file`, `MySQL Enterprise Backup`, `mysqlbackup command`.

**.MYI file**
A file that MySQL uses to store indexes for a `MyISAM` table.
See Also `.MYD file`, `MySQL Enterprise Backup`, `mysqlbackup command`.

**master server**
Frequently shortened to “master”. A database server machine in a replication scenario that processes the initial insert, update, and delete requests for data. These changes are propagated to, and repeated on, other servers known as slave servers.
master thread

An InnoDB thread that performs various tasks in the background. Most of these tasks are I/O related, such as writing changes from the change buffer to the appropriate secondary indexes.

To improve concurrency, sometimes actions are moved from the master thread to separate background threads. For example, in MySQL 5.6 and higher, dirty pages are flushed from the buffer pool by the page cleaner thread rather than the master thread.

See Also buffer pool, change buffer, concurrency, dirty page, flush, page cleaner, thread.

memcached

A popular component of many MySQL and NoSQL software stacks, allowing fast reads and writes for single values and caching the results entirely in memory. Traditionally, applications required extra logic to write the same data to a MySQL database for permanent storage, or to read data from a MySQL database when it was not cached yet in memory. Now, applications can use the simple memcached protocol, supported by client libraries for many languages, to communicate directly with MySQL servers using InnoDB or NDB tables. These NoSQL interfaces to MySQL tables allow applications to achieve higher read and write performance than by issuing SQL statements directly, and can simplify application logic and deployment configurations for systems that already incorporate memcached for in-memory caching.

The memcached interface to InnoDB tables is available in MySQL 5.6 and higher; see Section 15.20, “InnoDB memcached Plugin” for details. The memcached interface to NDB tables is available in NDB Cluster 7.2 and later; see http://dev.mysql.com/doc/ndbapi/en/ndbmemcache.html for details.

See Also InnoDB, NoSQL.

merge

To apply changes to data cached in memory, such as when a page is brought into the buffer pool, and any applicable changes recorded in the change buffer are incorporated into the page in the buffer pool. The updated data is eventually written to the tablespace by the flush mechanism.

See Also buffer pool, change buffer, flush, tablespace.

metadata lock

A type of lock that prevents DDL operations on a table that is being used at the same time by another transaction. For details, see Section 8.11.4, “Metadata Locking”.

Enhancements to online operations, particularly in MySQL 5.6 and higher, are focused on reducing the amount of metadata locking. The objective is for DDL operations that do not change the table structure (such as CREATE_INDEX and DROP_INDEX for InnoDB tables) to proceed while the table is being queried, updated, and so on by other transactions.

See Also DDL, lock, online, transaction.

metrics counter

A feature implemented by the INNODB_METRICS table in the INFORMATION_SCHEMA, in MySQL 5.6 and higher. You can query counts and totals for low-level InnoDB operations, and use the results for performance tuning in combination with data from the Performance Schema.

See Also counter, INFORMATION_SCHEMA, Performance Schema.

midpoint insertion strategy

The technique of initially bringing pages into the InnoDB buffer pool not at the “newest” end of the list, but instead somewhere in the middle. The exact location of this point can vary, based on the setting of the innodb_old_blocks_pct option. The intent is that pages that are only read once, such as during a full table scan, can be aged out of the buffer pool sooner than with a strict LRU algorithm. For more information, see Section 15.5.1, “Buffer Pool”.

See Also buffer pool, full table scan, LRU, page.
mini-transaction

An internal phase of InnoDB processing, when making changes at the physical level to internal data structures during DML operations. A mini-transaction (mtr) has no notion of rollback; multiple mini-transactions can occur within a single transaction. Mini-transactions write information to the redo log that is used during crash recovery. A mini-transaction can also happen outside the context of a regular transaction, for example during purge processing by background threads.

See Also commit, crash recovery, DML, physical, purge, redo log, rollback, transaction.

mixed-mode insert

An INSERT statement where auto-increment values are specified for some but not all of the new rows. For example, a multi-value INSERT could specify a value for the auto-increment column in some cases and NULL in other cases. InnoDB generates auto-increment values for the rows where the column value was specified as NULL. Another example is an INSERT ... ON DUPLICATE KEY UPDATE statement, where auto-increment values might be generated but not used, for any duplicate rows that are processed as UPDATE rather than INSERT statements.

Can cause consistency issues between master and slave servers in a replication configuration. Can require adjusting the value of the innodb_autoinc_lock_mode configuration option.

See Also auto-increment, innodb_autoinc_lock_mode, master server, replication, slave server.

mtr

See mini-transaction.

multi-core

A type of processor that can take advantage of multithreaded programs, such as the MySQL server.

multiversion concurrency control

See MVCC.

mutex

Informal abbreviation for “mutex variable”. (Mutex itself is short for “mutual exclusion”.) The low-level object that InnoDB uses to represent and enforce exclusive-access locks to internal in-memory data structures. Once the lock is acquired, any other process, thread, and so on is prevented from acquiring the same lock. Contrast with rw-locks, which InnoDB uses to represent and enforce shared-access locks to internal in-memory data structures. Mutexes and rw-locks are known collectively as latches.

See Also latch, lock, Performance Schema, Pthreads, rw-lock.

MVCC

Acronym for “multiversion concurrency control”. This technique lets InnoDB transactions with certain isolation levels perform consistent read operations; that is, to query rows that are being updated by other transactions, and see the values from before those updates occurred. This is a powerful technique to increase concurrency, by allowing queries to proceed without waiting due to locks held by the other transactions.

This technique is not universal in the database world. Some other database products, and some other MySQL storage engines, do not support it.

See Also ACID, concurrency, consistent read, isolation level, lock, transaction.

my.cnf

The name, on Unix or Linux systems, of the MySQL option file.

See Also my.ini, option file.

my.ini

The name, on Windows systems, of the MySQL option file.

See Also my.cnf, option file.

mysql

The mysql program is the command-line interpreter for the MySQL database. It processes SQL statements, and also MySQL-specific commands such as SHOW TABLES, by passing requests to the mysql daemon.

See Also mysql, SQL.
MySQL Enterprise Backup

A licensed product that performs **hot backups** of MySQL databases. It offers the most efficiency and flexibility when backing up **InnoDB** tables, but can also back up **MyISAM** and other kinds of tables. See Also **hot backup**, **InnoDB**.

**mysqlbackup command**

A command-line tool of the **MySQL Enterprise Backup** product. It performs a **hot backup** operation for **InnoDB** tables, and a **warm backup** for **MyISAM** and other kinds of tables. See Section 30.2, “MySQL Enterprise Backup Overview” for more information about this command. See Also **hot backup**, **MySQL Enterprise Backup**, **warm backup**.

**mysqld**

The **mysqld** program is the database engine for the MySQL database. It runs as a Unix daemon or Windows service, constantly waiting for requests and performing maintenance work in the background. See Also **mysql**.

**mysqldump**

A command that performs a **logical backup** of some combination of databases, tables, and table data. The results are SQL statements that reproduce the original schema objects, data, or both. For substantial amounts of data, a **physical backup** solution such as **MySQL Enterprise Backup** is faster, particularly for the **restore** operation. See Also **logical backup**, **MySQL Enterprise Backup**, **physical backup**, **restore**.

### N

**natural key**

An indexed column, typically a **primary key**, where the values have some real-world significance. Usually advised against because:

- If the value should ever change, there is potentially a lot of index maintenance to re-sort the **clustered index** and update the copies of the primary key value that are repeated in each **secondary index**.

- Even seemingly stable values can change in unpredictable ways that are difficult to represent correctly in the database. For example, one country can change into two or several, making the original country code obsolete. Or, rules about unique values might have exceptions. For example, even if taxpayer IDs are intended to be unique to a single person, a database might have to handle records that violate that rule, such as in cases of identity theft. Taxpayer IDs and other sensitive ID numbers also make poor primary keys, because they may need to be secured, encrypted, and otherwise treated differently than other columns.

Thus, it is typically better to use arbitrary numeric values to form a **synthetic key**, for example using an **auto-increment** column. See Also **auto-increment**, **clustered index**, **primary key**, **secondary index**, **synthetic key**.

**neighbor page**

Any **page** in the same **extent** as a particular page. When a page is selected to be **flushed**, any neighbor pages that are **dirty** are typically flushed as well, as an I/O optimization for traditional hard disks. In MySQL 5.6 and up, this behavior can be controlled by the configuration variable **innodb_flush_neighbors**; you might turn that setting off for SSD drives, which do not have the same overhead for writing smaller batches of data at random locations. See Also **dirty page**, **extent**, **flush**, **page**.

**next-key lock**

A combination of a **record lock** on the index record and a **gap lock** on the gap before the index record. See Also **gap lock**, **locking**, **record lock**.

**non-locking read**

A **query** that does not use the **SELECT ... FOR UPDATE** or **SELECT ... LOCK IN SHARE MODE** clauses. The only kind of query allowed for global tables in a **read-only transaction**. The opposite of a **locking read**. See Section 15.7.2.3, “Consistent Nonlocking Reads”.

6240
SELECT ... FOR SHARE replaces SELECT ... LOCK IN SHARE MODE in MySQL 8.0.1, but LOCK IN
SHARE MODE remains available for backward compatibility. See Also locking read, query, read-only transaction.

non-repeatable read
The situation when a query retrieves data, and a later query within the same transaction retrieves what
should be the same data, but the queries return different results (changed by another transaction committing
in the meantime).

This kind of operation goes against the ACID principle of database design. Within a transaction, data should
be consistent, with predictable and stable relationships.

Among different isolation levels, non-repeatable reads are prevented by the serializable read and
repeatable read levels, and allowed by the consistent read, and read uncommitted levels. See Also ACID, consistent read, isolation level, READ UNCOMMITTED, REPEATABLE READ, SERIALIZABLE, transaction.

nonblocking I/O
An industry term that means the same as asynchronous I/O. See Also asynchronous I/O.

normalized
A database design strategy where data is split into multiple tables, and duplicate values condensed into
single rows represented by an ID, to avoid storing, querying, and updating redundant or lengthy values. It is
typically used in OLTP applications.

For example, an address might be given a unique ID, so that a census database could represent the
relationship lives at this address by associating that ID with each member of a family, rather than storing
multiple copies of a complex value such as 123 Main Street, Anytown, USA.

For another example, although a simple address book application might store each phone number in the
same table as a person's name and address, a phone company database might give each phone number a
special ID, and store the numbers and IDs in a separate table. This normalized representation could simplify
large-scale updates when area codes split apart.

Normalization is not always recommended. Data that is primarily queried, and only updated by deleting
entirely and reloading, is often kept in fewer, larger tables with redundant copies of duplicate values. This data
representation is referred to as denormalized, and is frequently found in data warehousing applications.
See Also denormalized, foreign key, OLTP, relational.

NoSQL
A broad term for a set of data access technologies that do not use the SQL language as their primary
mechanism for reading and writing data. Some NoSQL technologies act as key-value stores, only accepting
single-value reads and writes; some relax the restrictions of the ACID methodology; still others do not require
a pre-planned schema. MySQL users can combine NoSQL-style processing for speed and simplicity with
SQL operations for flexibility and convenience, by using the memcached API to directly access some kinds
of MySQL tables. The memcached interface to InnoDB tables is available in MySQL 5.6 and higher; see
Section 15.20, “InnoDB memcached Plugin” for details. The memcached interface to NDB tables is available in
NDB Cluster 7.2 and later; see ndbmemcache—Memcache API for NDB Cluster.
See Also ACID, InnoDB, memcached, schema, SQL.

NOT NULL constraint
A type of constraint that specifies that a column cannot contain any NULL values. It helps to preserve
referential integrity, as the database server can identify data with erroneous missing values. It also helps
in the arithmetic involved in query optimization, allowing the optimizer to predict the number of entries in an
index on that column.
See Also column, constraint, NULL, primary key, referential integrity.

NULL
A special value in SQL, indicating the absence of data. Any arithmetic operation or equality test involving a
NULL value, in turn produces a NULL result. (Thus it is similar to the IEEE floating-point concept of NaN, “not
A number. Any aggregate calculation such as AVG() ignores rows with NULL values, when determining how many rows to divide by. The only test that works with NULL values uses the SQL idioms IS NULL or IS NOT NULL.

NULL values play a part in index operations, because for performance a database must minimize the overhead of keeping track of missing data values. Typically, NULL values are not stored in an index, because a query that tests an indexed column using a standard comparison operator could never match a row with a NULL value for that column. For the same reason, unique indexes do not prevent NULL values; those values simply are not represented in the index. Declaring a NOT NULL constraint on a column provides reassurance that there are no rows left out of the index, allowing for better query optimization (accurate counting of rows and estimation of whether to use the index).

Because the primary key must be able to uniquely identify every row in the table, a single-column primary key cannot contain any NULL values, and a multi-column primary key cannot contain any rows with NULL values in all columns.

Although the Oracle database allows a NULL value to be concatenated with a string, InnoDB treats the result of such an operation as NULL.
See Also index, primary key, SQL.

.OPT file
A file containing database configuration information. Files with this extension are included in backups produced by the mysqlbackup command of the MySQL Enterprise Backup product.
See Also MySQL Enterprise Backup, mysqlbackup command.

off-page column
A column containing variable-length data (such as BLOB and VARCHAR) that is too long to fit on a B-tree page. The data is stored in overflow pages. The DYNAMIC row format is more efficient for such storage than the older COMPACT row format.
See Also B-tree, compact row format, dynamic row format, overflow page.

OLTP
Acronym for “Online Transaction Processing”. A database system, or a database application, that runs a workload with many transactions, with frequent writes as well as reads, typically affecting small amounts of data at a time. For example, an airline reservation system or an application that processes bank deposits. The data might be organized in normalized form for a balance between DML (insert/update/delete) efficiency and query efficiency. Contrast with data warehouse.

With its row-level locking and transactional capability, InnoDB is the ideal storage engine for MySQL tables used in OLTP applications.
See Also data warehouse, DML, InnoDB, query, row lock, transaction.

online
A type of operation that involves no downtime, blocking, or restricted operation for the database. Typically applied to DDL. Operations that shorten the periods of restricted operation, such as fast index creation, have evolved into a wider set of online DDL operations in MySQL 5.6.

In the context of backups, a hot backup is an online operation and a warm backup is partially an online operation.
See Also DDL, Fast Index Creation, hot backup, online DDL, warm backup.

online DDL
A feature that improves the performance, concurrency, and availability of InnoDB tables during DDL (primarily ALTER TABLE) operations. See Section 15.12, “InnoDB and Online DDL” for details.

The details vary according to the type of operation. In some cases, the table can be modified concurrently while the ALTER TABLE is in progress. The operation might be able to be performed without a table copy, or
using a specially optimized type of table copy. DML log space usage for in-place operations is controlled by
the `innodb_online_alter_log_max_size` configuration option.

This feature is an enhancement of the **Fast Index Creation** feature in MySQL 5.5.

See Also **DDL**, **Fast Index Creation**, online.

**optimistic**

A methodology that guides low-level implementation decisions for a relational database system. The
requirements of performance and **concurrency** in a relational database mean that operations must be started
or dispatched quickly. The requirements of consistency and **referential integrity** mean that any operation
could fail: a transaction might be rolled back, a **DML** operation could violate a constraint, a request for a lock
could cause a deadlock, a network error could cause a timeout. An optimistic strategy is one that assumes
most requests or attempts will succeed, so that relatively little work is done to prepare for the failure case.
When this assumption is true, the database does little unnecessary work; when requests do fail, extra work
must be done to clean up and undo changes.

**InnoDB** uses optimistic strategies for operations such as **locking** and **commits**. For example, data changed
by a transaction can be written to the data files before the commit occurs, making the commit itself very fast,
but requiring more work to undo the changes if the transaction is rolled back.

The opposite of an optimistic strategy is a **pessimistic** one, where a system is optimized to deal with
operations that are unreliable and frequently unsuccessful. This methodology is rare in a database system,
because so much care goes into choosing reliable hardware, networks, and algorithms.

See Also **commit**, **concurrency**, **DML**, **locking**, **pessimistic**, **referential integrity**.

**optimizer**

The MySQL component that determines the best **indexes** and **join** order to use for a **query**, based on
characteristics and data distribution of the relevant **tables**.

See Also **index**, **join**, **query**, **table**.

**option**

A configuration parameter for MySQL, either stored in the **option file** or passed on the command line.

For the **options** that apply to **InnoDB** tables, each option name starts with the prefix `innodb_`.

See Also **InnoDB**, **option**, **option file**.

**option file**

The file that holds the configuration **options** for the MySQL instance. Traditionally, on Linux and Unix this file
is named `my.cnf`, and on Windows it is named `my.ini`.

See Also **configuration file**, **my.cnf**, **my.ini**, **option**.

**overflow page**

Separately allocated disk **pages** that hold variable-length columns (such as **BLOB** and **VARCHAR**) that are too
long to fit on a **B-tree** page. The associated columns are known as **off-page columns**.

See Also **B-tree**, **off-page column**, **page**.

**.par file**

A file containing partition definitions. Files with this extension are included in backups produced by the
`mysqlbackup` command of the **MySQL Enterprise Backup** product.

With the introduction of native partitioning support for **InnoDB** tables in MySQL 5.7.6, **.par** files are no longer
created for partitioned **InnoDB** tables. Partitioned **MyISAM** tables continue to use **.par** files in MySQL 5.7. In
MySQL 8.0, partitioning support is only provided by the **InnoDB** storage engine. As such, **.par** files are no
longer used as of MySQL 8.0.

See Also **MySQL Enterprise Backup**, **mysqlbackup command**.

**page**

A unit representing how much data **InnoDB** transfers at any one time between disk (the **data files**) and
memory (the **buffer pool**). A page can contain one or more **rows**, depending on how much data is in each
row. If a row does not fit entirely into a single page, InnoDB sets up additional pointer-style data structures so that the information about the row can be stored in one page.

One way to fit more data in each page is to use **compressed row format**. For tables that use BLOBs or large text fields, **compact row format** allows those large columns to be stored separately from the rest of the row, reducing I/O overhead and memory usage for queries that do not reference those columns.

When InnoDB reads or writes sets of pages as a batch to increase I/O throughput, it reads or writes an **extent** at a time.

All the InnoDB disk data structures within a MySQL instance share the same **page size**.

See Also buffer pool, compact row format, compressed row format, data files, extent, page size, row.

**page cleaner**

An InnoDB background thread that **flushes dirty pages** from the buffer pool. Prior to MySQL 5.6, this activity was performed by the master thread. The number of page cleaner threads is controlled by the **innodb_page_cleaners** configuration option, introduced in MySQL 5.7.4.

See Also buffer pool, dirty page, flush, master thread, thread.

**page size**

For releases up to and including MySQL 5.5, the size of each InnoDB page is fixed at 16 kilobytes. This value represents a balance: large enough to hold the data for most rows, yet small enough to minimize the performance overhead of transferring unneeded data to memory. Other values are not tested or supported.

Starting in MySQL 5.6, the page size for an InnoDB instance can be either 4KB, 8KB, or 16KB, controlled by the **innodb_page_size** configuration option. As of MySQL 5.7.6, InnoDB also supports 32KB and 64KB page sizes. For 32KB and 64KB page sizes, **ROW_FORMAT=COMPRESSED** is not supported and the maximum record size is 16KB.

Page size is set when creating the MySQL instance, and it remains constant afterward. The same page size applies to all InnoDB tablespaces, including the system tablespace, file-per-table tablespaces, and general tablespaces.

Smaller page sizes can help performance with storage devices that use small block sizes, particularly for SSD devices in disk-bound workloads, such as for OLTP applications. As individual rows are updated, less data is copied into memory, written to disk, reorganized, locked, and so on.

See Also disk-bound, file-per-table, general tablespace, instance, OLTP, page, SSD, system tablespace, tablespace.

**parent table**

The table in a **foreign key** relationship that holds the initial column values pointed to from the **child table**. The consequences of deleting, or updating rows in the parent table depend on the **ON UPDATE** and **ON DELETE** clauses in the foreign key definition. Rows with corresponding values in the child table could be automatically deleted or updated in turn, or those columns could be set to NULL, or the operation could be prevented.

See Also child table, foreign key.

**partial backup**

A backup that contains some of the tables in a MySQL database, or some of the databases in a MySQL instance. Contrast with full backup.

See Also backup, full backup, table.

**partial index**

An index that represents only part of a column value, typically the first N characters (the **prefix**) of a long VARCHAR value.

See Also index, index prefix.

**Performance Schema**

The **performance_schema** schema, in MySQL 5.5 and up, presents a set of tables that you can query to get detailed information about the performance characteristics of many internal parts of the MySQL server.

---

**Note:** The content provided is a natural language representation of the text from the document. It has been converted to plain text format for readability.
See Also INFORMATION_SCHEMA, latch, mutex, rw-lock.

persistent statistics
A feature that stores index statistics for InnoDB tables on disk, providing better plan stability for queries. For more information, see Section 15.8.10.1, “Configuring Persistent Optimizer Statistics Parameters”. See Also index, optimizer, plan stability, query, table.

pessimistic
A methodology that sacrifices performance or concurrency in favor of safety. It is appropriate if a high proportion of requests or attempts might fail, or if the consequences of a failed request are severe. InnoDB uses what is known as a pessimistic locking strategy, to minimize the chance of deadlocks. At the application level, you might avoid deadlocks by using a pessimistic strategy of acquiring all locks needed by a transaction at the very beginning.

Many built-in database mechanisms use the opposite optimistic methodology. See Also deadlock, locking, optimistic.

phantom
A row that appears in the result set of a query, but not in the result set of an earlier query. For example, if a query is run twice within a transaction, and in the meantime, another transaction commits after inserting a new row or updating a row so that it matches the WHERE clause of the query.

This occurrence is known as a phantom read. It is harder to guard against than a non-repeatable read, because locking all the rows from the first query result set does not prevent the changes that cause the phantom to appear.

Among different isolation levels, phantom reads are prevented by the serializable read level, and allowed by the repeatable read, consistent read, and read uncommitted levels. See Also consistent read, isolation level, non-repeatable read, READ UNCOMMITTED, REPEATABLE READ, SERIALIZABLE, transaction.

physical
A type of operation that involves hardware-related aspects such as disk blocks, memory pages, files, bits, disk reads, and so on. Typically, physical aspects are important during expert-level performance tuning and problem diagnosis. Contrast with logical.

See Also logical, physical backup.

physical backup
A backup that copies the actual data files. For example, the mysqlbackup command of the MySQL Enterprise Backup product produces a physical backup, because its output contains data files that can be used directly by the mysqld server, resulting in a faster restore operation. Contrast with logical backup. See Also backup, logical backup, MySQL Enterprise Backup, restore.

PITR
Acronym for point-in-time recovery. See Also point-in-time recovery.

plan stability
A property of a query execution plan, where the optimizer makes the same choices each time for a given query, so that performance is consistent and predictable. See Also query, query execution plan.

point-in-time recovery
The process of restoring a backup to recreate the state of the database at a specific date and time. Commonly abbreviated “PITR”. Because it is unlikely that the specified time corresponds exactly to the time of a backup, this technique usually requires a combination of a physical backup and a logical backup. For example, with the MySQL Enterprise Backup product, you restore the last backup that you took before the specified point in time, then replay changes from the binary log between the time of the backup and the PITR time. See Also backup, binary log, logical backup, MySQL Enterprise Backup, physical backup.
See index prefix.

**prepared backup**

A set of backup files, produced by the MySQL Enterprise Backup product, after all the stages of applying binary logs and incremental backups are finished. The resulting files are ready to be restored. Prior to the apply steps, the files are known as a raw backup.

See Also binary log, hot backup, incremental backup, MySQL Enterprise Backup, raw backup, restore.

**primary key**

A set of columns—and by implication, the index based on this set of columns—that can uniquely identify every row in a table. As such, it must be a unique index that does not contain any NULL values.

InnoDB requires that every table has such an index (also called the clustered index or cluster index), and organizes the table storage based on the column values of the primary key.

When choosing primary key values, consider using arbitrary values (a synthetic key) rather than relying on values derived from some other source (a natural key).

See Also clustered index, index, natural key, synthetic key.

**process**

An instance of an executing program. The operating system switches between multiple running processes, allowing for a certain degree of concurrency. On most operating systems, processes can contain multiple threads of execution that share resources. Context-switching between threads is faster than the equivalent switching between processes.

See Also concurrency, thread.

**pseudo-record**

An artificial record in an index, used for locking key values or ranges that do not currently exist.

See Also infimum record, locking, supremum record.

**Pthreads**

The POSIX threads standard, which defines an API for threading and locking operations on Unix and Linux systems. On Unix and Linux systems, InnoDB uses this implementation for mutexes.

See Also mutex.

**purge**

A type of garbage collection performed by one or more separate background threads (controlled by innodb_purge_threads) that runs on a periodic schedule. Purge parses and processes undo log pages from the history list for the purpose of removing clustered and secondary index records that were marked for deletion (by previous DELETE statements) and are no longer required for MVCC or rollback. Purge frees undo log pages from the history list after processing them.

See Also history list, MVCC, rollback, undo log.

**purge buffering**

The technique of storing changes to secondary index pages, resulting from DELETE operations, in the change buffer rather than writing the changes immediately, so that the physical writes can be performed to minimize random I/O. (Because delete operations are a two-step process, this operation buffers the write that normally purges an index record that was previously marked for deletion.) It is one of the types of change buffering; the others are insert buffering and delete buffering.

See Also change buffer, change buffering, delete buffering, insert buffer, insert buffering.

**purge lag**

Another name for the InnoDB history list. Related to the innodb_max_purge_lag configuration option.

See Also history list, purge.

**purge thread**

A thread within the InnoDB process that is dedicated to performing the periodic purge operation. In MySQL 5.6 and higher, multiple purge threads are enabled by the innodb_purge_threads configuration option.

See Also purge, thread.
query
In SQL, an operation that reads information from one or more tables. Depending on the organization of data and the parameters of the query, the lookup might be optimized by consulting an index. If multiple tables are involved, the query is known as a join.

For historical reasons, sometimes discussions of internal processing for statements use “query” in a broader sense, including other types of MySQL statements such as DDL and DML statements.
See Also DDL, DML, index, join, SQL, table.

query execution plan
The set of decisions made by the optimizer about how to perform a query most efficiently, including which index or indexes to use, and the order in which to join tables. Plan stability involves the same choices being made consistently for a given query.
See Also index, join, plan stability, query.

query log
See general query log.

quiesce
To reduce the amount of database activity, often in preparation for an operation such as an ALTER TABLE, a backup, or a shutdown. Might or might not involve doing as much flushing as possible, so that InnoDB does not continue doing background I/O.

In MySQL 5.6 and higher, the syntax FLUSH TABLES ... FOR EXPORT writes some data to disk for InnoDB tables that make it simpler to back up those tables by copying the data files.
See Also backup, flush, InnoDB, shutdown.

R

R-tree
A tree data structure used for spatial indexing of multi-dimensional data such as geographical coordinates, rectangles or polygons.
See Also B-tree.

RAID
Acronym for “Redundant Array of Inexpensive Drives”. Spreading I/O operations across multiple drives enables greater concurrency at the hardware level, and improves the efficiency of low-level write operations that otherwise would be performed in sequence.
See Also concurrency.

random dive
A technique for quickly estimating the number of different values in a column (the column’s cardinality). InnoDB samples pages at random from the index and uses that data to estimate the number of different values.
See Also cardinality.

raw backup
The initial set of backup files produced by the MySQL Enterprise Backup product, before the changes reflected in the binary log and any incremental backups are applied. At this stage, the files are not ready to restore. After these changes are applied, the files are known as a prepared backup.
See Also binary log, hot backup, ibbackup_logfile, incremental backup, MySQL Enterprise Backup, prepared backup, restore.

READ COMMITTED
An Isolation level that uses a locking strategy that relaxes some of the protection between transactions, in the interest of performance. Transactions cannot see uncommitted data from other transactions, but they can see data that is committed by another transaction after the current transaction started. Thus, a transaction
never sees any bad data, but the data that it does see may depend to some extent on the timing of other transactions.

When a transaction with this isolation level performs UPDATE ... WHERE or DELETE ... WHERE operations, other transactions might have to wait. The transaction can perform SELECT ... FOR UPDATE, and LOCK IN SHARE MODE operations without making other transactions wait.

SELECT ... FOR SHARE replaces SELECT ... LOCK IN SHARE MODE in MySQL 8.0.1, but LOCK IN SHARE MODE remains available for backward compatibility.

See Also ACID, isolation level, locking, REPEATABLE READ, SERIALIZABLE, transaction.

read phenomena
Phenomena such as dirty reads, non-repeatable reads, and phantom reads which can occur when a transaction reads data that another transaction has modified.

See Also dirty read, non-repeatable read, phantom.

READ UNCOMMITTED
The isolation level that provides the least amount of protection between transactions. Queries employ a locking strategy that allows them to proceed in situations where they would normally wait for another transaction. However, this extra performance comes at the cost of less reliable results, including data that has been changed by other transactions and not committed yet (known as dirty read). Use this isolation level with great caution, and be aware that the results might not be consistent or reproducible, depending on what other transactions are doing at the same time. Typically, transactions with this isolation level only do queries, not insert, update, or delete operations.

See Also ACID, dirty read, isolation level, locking, transaction.

read view
An internal snapshot used by the MVCC mechanism of InnoDB. Certain transactions, depending on their isolation level, see the data values as they were at the time the transaction (or in some cases, the statement) started. Isolation levels that use a read view are REPEATABLE READ, READ COMMITTED, and READ UNCOMMITTED.

See Also isolation level, MVCC, READ COMMITTED, READ UNCOMMITTED, REPEATABLE READ, transaction.

read-ahead
A type of I/O request that prefetches a group of pages (an entire extent) into the buffer pool asynchronously, in anticipation that these pages will be needed soon. The linear read-ahead technique prefetches all the pages of one extent based on access patterns for pages in the preceding extent. The random read-ahead technique prefetches all the pages for an extent once a certain number of pages from the same extent are in the buffer pool. Random read-ahead is not part of MySQL 5.5, but is re-introduced in MySQL 5.6 under the control of the innodb_random_read_ahead configuration option.

See Also buffer pool, extent, page.

read-only transaction
A type of transaction that can be optimized for InnoDB tables by eliminating some of the bookkeeping involved with creating a read view for each transaction. Can only perform non-locking read queries. It can be started explicitly with the syntax START TRANSACTION READ ONLY, or automatically under certain conditions. See Section 8.5.3, “Optimizing InnoDB Read-Only Transactions” for details.

See Also non-locking read, read view, transaction.

record lock
A lock on an index record. For example, SELECT c1 FROM t WHERE c1 = 10 FOR UPDATE; prevents any other transaction from inserting, updating, or deleting rows where the value of t.c1 is 10. Contrast with gap lock and next-key lock.

See Also gap lock, lock, next-key lock.

redo
The data, in units of records, recorded in the redo log when DML statements make changes to InnoDB tables. It is used during crash recovery to correct data written by incomplete transactions. The ever-increasing LSN value represents the cumulative amount of redo data that has passed through the redo log.
See Also crash recovery, DML, LSN, redo log, transaction.

redo log
A disk-based data structure used during crash recovery, to correct data written by incomplete transactions. During normal operation, it encodes requests to change InnoDB table data, which result from SQL statements or low-level API calls through NoSQL interfaces. Modifications that did not finish updating the data files before an unexpected shutdown are replayed automatically.

The redo log is physically represented as a set of files, typically named `ib_logfile0` and `ib_logfile1`. The data in the redo log is encoded in terms of records affected; this data is collectively referred to as redo. The passage of data through the redo logs is represented by the ever-increasing LSN value. The original 4GB limit on maximum size for the redo log is raised to 512GB in MySQL 5.6.3.

The disk layout of the redo log is influenced by the configuration options `innodb_log_file_size`, `innodb_log_group_home_dir`, and (rarely) `innodb_log_files_in_group`. The performance of redo log operations is also affected by the log buffer, which is controlled by the `innodb_log_buffer_size` configuration option.

See Also crash recovery, data files, ib_logfile, log buffer, LSN, redo, shutdown, transaction.

redo log archiving
An InnoDB feature that, when enabled, sequentially writes redo log records to an archive file to avoid potential loss of data than can occur when a backup utility fails to keep pace with redo log generation while a backup operation is in progress. For more information, see Redo Log Archiving.

See Also redo log.

redundant row format
The oldest InnoDB row format. Prior to MySQL 5.0.3, it was the only row format available in InnoDB. From MySQL 5.0.3 to MySQL 5.7.8, the default row format is COMPACT. As of MySQL 5.7.9, the default row format is defined by the `innodb_default_row_format` configuration option, which has a default setting of DYNAMIC. You can still specify the REDUNDANT row format for compatibility with older InnoDB tables.

For more information, see Section 15.10, “InnoDB Row Formats”.

See Also compact row format, dynamic row format, row format.

referential integrity
The technique of maintaining data always in a consistent format, part of the ACID philosophy. In particular, data in different tables is kept consistent through the use of foreign key constraints, which can prevent changes from happening or automatically propagate those changes to all related tables. Related mechanisms include the unique constraint, which prevents duplicate values from being inserted by mistake, and the NOT NULL constraint, which prevents blank values from being inserted by mistake.

See Also ACID, FOREIGN KEY constraint, NOT NULL constraint, unique constraint.

relational
An important aspect of modern database systems. The database server encodes and enforces relationships such as one-to-one, one-to-many, many-to-one, and uniqueness. For example, a person might have zero, one, or many phone numbers in an address database; a single phone number might be associated with several family members. In a financial database, a person might be required to have exactly one taxpayer ID, and any taxpayer ID could only be associated with one person.

The database server can use these relationships to prevent bad data from being inserted, and to find efficient ways to look up information. For example, if a value is declared to be unique, the server can stop searching as soon as the first match is found, and it can reject attempts to insert a second copy of the same value.

At the database level, these relationships are expressed through SQL features such as columns within a table, unique and NOT NULL constraints, foreign keys, and different kinds of join operations. Complex relationships typically involve data split between more than one table. Often, the data is normalized, so that duplicate values in one-to-many relationships are stored only once.

In a mathematical context, the relations within a database are derived from set theory. For example, the OR and AND operators of a WHERE clause represent the notions of union and intersection.
See Also ACID, column, constraint, foreign key, normalized.

relevance
In the full-text search feature, a number signifying the similarity between the search string and the data in the FULLTEXT index. For example, when you search for a single word, that word is typically more relevant for a row where it occurs several times in the text than a row where it appears only once.
See Also full-text search, FULLTEXT index.

REPEATABLE READ
The default isolation level for InnoDB. It prevents any rows that are queried from being changed by other transactions, thus blocking non-repeatable reads but not phantom reads. It uses a moderately strict locking strategy so that all queries within a transaction see data from the same snapshot, that is, the data as it was at the time the transaction started.

When a transaction with this isolation level performs UPDATE ... WHERE, DELETE ... WHERE, SELECT ... FOR UPDATE, and LOCK IN SHARE MODE operations, other transactions might have to wait.

SELECT ... FOR SHARE replaces SELECT ... LOCK IN SHARE MODE in MySQL 8.0.1, but LOCK IN SHARE MODE remains available for backward compatibility.
See Also ACID, consistent read, isolation level, locking, phantom, transaction.

repertoire
Repertoire is a term applied to character sets. A character set repertoire is the collection of characters in the set. See Section 10.2.1, “Character Set Repertoire”.

replication
The practice of sending changes from a master database, to one or more slave databases, so that all databases have the same data. This technique has a wide range of uses, such as load-balancing for better scalability, disaster recovery, and testing software upgrades and configuration changes. The changes can be sent between the database by methods called row-based replication and statement-based replication.
See Also master server, row-based replication, slave server, statement-based replication.

restore
The process of putting a set of backup files from the MySQL Enterprise Backup product in place for use by MySQL. This operation can be performed to fix a corrupted database, to return to some earlier point in time, or (in a replication context) to set up a new slave database. In the MySQL Enterprise Backup product, this operation is performed by the copy-back option of the mysqlbackup command.
See Also hot backup, MySQL Enterprise Backup, mysqlbackup command, prepared backup, replication, slave server.

rollback
A SQL statement that ends a transaction, undoing any changes made by the transaction. It is the opposite of commit, which makes permanent any changes made in the transaction.

By default, MySQL uses the autocommit setting, which automatically issues a commit following each SQL statement. You must change this setting before you can use the rollback technique.
See Also ACID, autocommit, commit, SQL, transaction.

rollback segment
The storage area containing the undo logs. Rollback segments have traditionally resided in the system tablespace. As of MySQL 5.6, rollback segments can reside in undo tablespaces. As of MySQL 5.7, rollback segments are also allocated to the global temporary tablespace.
See Also global temporary tablespace, system tablespace, undo log, undo tablespace.

row
The logical data structure defined by a set of columns. A set of rows makes up a table. Within InnoDB data files, each page can contain one or more rows.

Although InnoDB uses the term row format for consistency with MySQL syntax, the row format is a property of each table and applies to all rows in that table.
See Also column, data files, page, row format, table.

row format

The disk storage format for rows of an InnoDB table. As InnoDB gains new capabilities such as compression, new row formats are introduced to support the resulting improvements in storage efficiency and performance.

The row format of an InnoDB table is specified by the `ROW_FORMAT` option or by the `innodb_default_row_format` configuration option (introduced in MySQL 5.7.9). Row formats include REDUNDANT, COMPACT, COMPRESSED, and DYNAMIC. To view the row format of an InnoDB table, issue the `SHOW TABLE STATUS` statement or query InnoDB table metadata in the INFORMATION_SCHEMA.

See Also compact row format, compressed row format, compression, dynamic row format, redundant row format, row, table.

row lock

A lock that prevents a row from being accessed in an incompatible way by another transaction. Other rows in the same table can be freely written to by other transactions. This is the type of locking done by DML operations on InnoDB tables.

Contrast with table locks used by MyISAM, or during DDL operations on InnoDB tables that cannot be done with online DDL; those locks block concurrent access to the table.

See Also DDL, DML, InnoDB, lock, locking, online DDL, table lock, transaction.

row-based replication

A form of replication where events are propagated from the master server specifying how to change individual rows on the slave server. It is safe to use for all settings of the `innodb_autoinc_lock_mode` option.

See Also auto-increment locking, innodb_autoinc_lock_mode, master server, replication, slave server, statement-based replication.

row-level locking

The locking mechanism used for InnoDB tables, relying on row locks rather than table locks. Multiple transactions can modify the same table concurrently. Only if two transactions try to modify the same row does one of the transactions wait for the other to complete (and release its row locks).

See Also InnoDB, locking, row lock, table lock, transaction.

rw-lock

The low-level object that InnoDB uses to represent and enforce shared-access locks to internal in-memory data structures following certain rules. Contrast with mutexes, which InnoDB uses to represent and enforce exclusive access to internal in-memory data structures. Mutexes and rw-locks are known collectively as latches.

rw-lock types include s-locks (shared locks), x-locks (exclusive locks), and sx-locks (shared-exclusive locks).

- An s-lock provides read access to a common resource.
- An x-lock provides write access to a common resource while not permitting inconsistent reads by other threads.
- An sx-lock provides write access to a common resource while permitting inconsistent reads by other threads. sx-locks were introduced in MySQL 5.7 to optimize concurrency and improve scalability for read-write workloads.

The following matrix summarizes rw-lock type compatibility.

<table>
<thead>
<tr>
<th></th>
<th>S</th>
<th>SX</th>
<th>X</th>
</tr>
</thead>
<tbody>
<tr>
<td>S</td>
<td>Compatible</td>
<td>Compatible</td>
<td>Conflict</td>
</tr>
<tr>
<td>SX</td>
<td>Compatible</td>
<td>Conflict</td>
<td>Conflict</td>
</tr>
</tbody>
</table>
savepoint

Savepoints help to implement nested transactions. They can be used to provide scope to operations on tables that are part of a larger transaction. For example, scheduling a trip in a reservation system might involve booking several different flights; if a desired flight is unavailable, you might roll back the changes involved in booking that one leg, without rolling back the earlier flights that were successfully booked. See Also rollback, transaction.

scalability

The ability to add more work and issue more simultaneous requests to a system, without a sudden drop in performance due to exceeding the limits of system capacity. Software architecture, hardware configuration, application coding, and type of workload all play a part in scalability. When the system reaches its maximum capacity, popular techniques for increasing scalability are scale up (increasing the capacity of existing hardware or software) and scale out (adding new servers and more instances of MySQL). Often paired with availability as critical aspects of a large-scale deployment. See Also availability, scale out, scale up.

scale out

A technique for increasing scalability by adding new servers and more instances of MySQL. For example, setting up replication, NDB Cluster, connection pooling, or other features that spread work across a group of servers. Contrast with scale up. See Also scalability, scale up.

scale up

A technique for increasing scalability by increasing the capacity of existing hardware or software. For example, increasing the memory on a server and adjusting memory-related parameters such as innodb_buffer_pool_size and innodb_buffer_pool_instances. Contrast with scale out. See Also scalability, scale out.

schema

Conceptually, a schema is a set of interrelated database objects, such as tables, table columns, data types of the columns, indexes, foreign keys, and so on. These objects are connected through SQL syntax, because the columns make up the tables, the foreign keys refer to tables and columns, and so on. Ideally, they are also connected logically, working together as part of a unified application or flexible framework. For example, the INFORMATION_SCHEMA and performance_schema databases use "schema" in their names to emphasize the close relationships between the tables and columns they contain.

In MySQL, physically, a schema is synonymous with a database. You can substitute the keyword SCHEMA instead of DATABASE in MySQL SQL syntax, for example using CREATE SCHEMA instead of CREATE DATABASE.

Some other database products draw a distinction. For example, in the Oracle Database product, a schema represents only a part of a database: the tables and other objects owned by a single user. See Also database, INFORMATION_SCHEMA, Performance Schema.

SDI

Acronym for “serialized dictionary information”. See Also serialized dictionary information (SDI).

search index

In MySQL, full-text search queries use a special kind of index, the FULLTEXT index. In MySQL 5.6.4 and up, InnoDB and MyISAM tables both support FULLTEXT indexes; formerly, these indexes were only available for MyISAM tables.
secondary index
A type of InnoDB index that represents a subset of table columns. An InnoDB table can have zero, one, or many secondary indexes. (Contrast with the clustered index, which is required for each InnoDB table, and stores the data for all the table columns.)

A secondary index can be used to satisfy queries that only require values from the indexed columns. For more complex queries, it can be used to identify the relevant rows in the table, which are then retrieved through lookups using the clustered index.

Creating and dropping secondary indexes has traditionally involved significant overhead from copying all the data in the InnoDB table. The fast index creation feature makes both CREATE INDEX and DROP INDEX statements much faster for InnoDB secondary indexes.

See Also clustered index, Fast Index Creation, index.

segment
A division within an InnoDB tablespace. If a tablespace is analogous to a directory, the segments are analogous to files within that directory. A segment can grow. New segments can be created.

For example, within a file-per-table tablespace, table data is in one segment and each associated index is in its own segment. The system tablespace contains many different segments, because it can hold many tables and their associated indexes. Prior to MySQL 8.0, the system tablespace also includes one or more rollback segments used for undo logs.

Segments grow and shrink as data is inserted and deleted. When a segment needs more room, it is extended by one extent (1 megabyte) at a time. Similarly, a segment releases one extent's worth of space when all the data in that extent is no longer needed.

See Also extent, file-per-table, rollback segment, system tablespace, tablespace, undo log.

selectivity
A property of data distribution, the number of distinct values in a column (its cardinality) divided by the number of records in the table. High selectivity means that the column values are relatively unique, and can retrieved efficiently through an index. If you (or the query optimizer) can predict that a test in a WHERE clause only matches a small number (or proportion) of rows in a table, the overall query tends to be efficient if it evaluates that test first, using an index.

See Also cardinality, query.

semi-consistent read
A type of read operation used for UPDATE statements, that is a combination of READ COMMITTED and consistent read. When an UPDATE statement examines a row that is already locked, InnoDB returns the latest committed version to MySQL so that MySQL can determine whether the row matches the WHERE condition of the UPDATE. If the row matches (must be updated), MySQL reads the row again, and this time InnoDB either locks it or waits for a lock on it. This type of read operation can only happen when the transaction has the READ COMMITTED isolation level.

See Also consistent read, isolation level, READ COMMITTED.

SERIALIZABLE
The isolation level that uses the most conservative locking strategy, to prevent any other transactions from inserting or changing data that was read by this transaction, until it is finished. This way, the same query can be run over and over within a transaction, and be certain to retrieve the same set of results each time. Any attempt to change data that was committed by another transaction since the start of the current transaction, cause the current transaction to wait.

This is the default isolation level specified by the SQL standard. In practice, this degree of strictness is rarely needed, so the default isolation level for InnoDB is the next most strict, REPEATABLE READ.

See Also ACID, consistent read, isolation level, locking, REPEATABLE READ, transaction.

serialized dictionary information (SDI)
Dictionary object metadata in serialized form. SDI is stored in JSON format.
As of MySQL 8.0.3, SDI is present in all InnoDB tablespace files except for temporary tablespace and undo tablespace files. The presence of SDI in tablespace files provides metadata redundancy. For example, dictionary object metadata can be extracted from tablespace files using the `ibd2sdi` utility if the data dictionary becomes unavailable.

For a MyISAM table, SDI is stored in a `.sdi` metadata file in the schema directory. An SDI metadata file is required to perform an `IMPORT TABLE` operation.

See Also `file-per-table`, `general tablespace`, `system tablespace`, `tablespace`.

server

A type of program that runs continuously, waiting to receive and act upon requests from another program (the client). Because often an entire computer is dedicated to running one or more server programs (such as a database server, a web server, an application server, or some combination of these), the term server can also refer to the computer that runs the server software.

See Also `client`, `mysqld`.

session temporary tablespace

A temporary tablespace that stores user-created temporary tables and internal temporary tables created by the optimizer when InnoDB is configured as the on-disk storage engine for internal temporary tables.

See Also `optimizer`, `temporary table`, `temporary tablespace`.

shared lock

A kind of lock that allows other transactions to read the locked object, and to also acquire other shared locks on it, but not to write to it. The opposite of `exclusive lock`.

See Also `exclusive lock`, `lock`, `transaction`.

shared tablespace

Another way of referring to the `system tablespace` or a `general tablespace`. General tablespaces were introduced in MySQL 5.7. More than one table can reside in a shared tablespace. Only a single table can reside in a `file-per-table` tablespace.

See Also `general tablespace`, `system tablespace`.

sharp checkpoint

The process of flushing to disk all dirty buffer pool pages whose redo entries are contained in certain portion of the redo log. Occurs before InnoDB reuses a portion of a log file; the log files are used in a circular fashion. Typically occurs with write-intensive workloads.

See Also `dirty page`, `flush`, `redo log`, `workload`.

shutdown

The process of stopping the MySQL server. By default, this process cleans up operations for InnoDB tables, so InnoDB can be slow to shut down, but fast to start up later. If you skip the cleanup operations, it is fast to shut down but the cleanup must be performed during the next restart.

The shutdown mode for InnoDB is controlled by the `innodb_fast_shutdown` option.

See Also `fast shutdown`, `InnoDB`, `slow shutdown`, `startup`.

slave server

Frequently shortened to “slave”. A database server machine in a replication scenario that receives changes from another server (the master) and applies those same changes. Thus it maintains the same contents as the master, although it might lag somewhat behind.

In MySQL, slave servers are commonly used in disaster recovery, to take the place of a master servers that fails. They are also commonly used for testing software upgrades and new settings, to ensure that database configuration changes do not cause problems with performance or reliability.

Slave servers typically have high workloads, because they process all the DML (write) operations relayed from the master, as well as user queries. To ensure that slave servers can apply changes from the master fast enough, they frequently have fast I/O devices and sufficient CPU and memory to run multiple database instances on the same slave server. For example, the master server might use hard drive storage while the slave servers use SSDs.
See Also DML, master server, replication, server, SSD.

**slow query log**
A type of **log** used for performance tuning of SQL statements processed by the MySQL server. The log information is stored in a file. You must enable this feature to use it. You control which categories of “slow” SQL statements are logged. For more information, see Section 5.4.5, “The Slow Query Log.”
See Also general query log, log.

**slow shutdown**
A type of **shutdown** that does additional InnoDB flushing operations before completing. Also known as a **clean shutdown**. Specified by the configuration parameter `innodb_fast_shutdown=0` or the command `SET GLOBAL innodb_fast_shutdown=0;`. Although the shutdown itself can take longer, that time will be saved on the subsequent startup.
See Also clean shutdown, fast shutdown, shutdown.

**snapshot**
A representation of data at a particular time, which remains the same even as changes are committed by other transactions. Used by certain isolation levels to allow consistent reads.
See Also commit, consistent read, isolation level, transaction.

**sort buffer**
The buffer used for sorting data during creation of an InnoDB index. Sort buffer size is configured using the `innodb_sort_buffer_size` configuration option.

**space ID**
An identifier used to uniquely identify an InnoDB tablespace within a MySQL instance. The space ID for the system tablespace is always zero; this same ID applies to all tables within the system tablespace or within a general tablespace. Each file-per-table tablespace and general tablespace has its own space ID.

Prior to MySQL 5.6, this hardcoded value presented difficulties in moving InnoDB tablespace files between MySQL instances. Starting in MySQL 5.6, you can copy tablespace files between instances by using the transportable tablespace feature involving the statements `FLUSH TABLES ... FOR EXPORT`, `ALTER TABLE ... DISCARD TABLESPACE`, and `ALTER TABLE ... IMPORT TABLESPACE`. The information needed to adjust the space ID is conveyed in the .cfg file which you copy along with the tablespace. See Section 15.6.1.3, “Importing InnoDB Tables” for details.
See Also .cfg file, file-per-table, general tablespace, .ibd file, system tablespace, tablespace, transportable tablespace.

**sparse file**
A type of file that uses file system space more efficiently by writing metadata representing empty blocks to disk instead of writing the actual empty space. The InnoDB transparent page compression feature relies on sparse file support. For more information, see Section 15.9.2, “InnoDB Page Compression”.
See Also hole punching, transparent page compression.

**spin**
A type of **wait** operation that continuously tests whether a resource becomes available. This technique is used for resources that are typically held only for brief periods, where it is more efficient to wait in a “busy loop” than to put the thread to sleep and perform a context switch. If the resource does not become available within a short time, the spin loop ceases and another wait technique is used.
See Also latch, lock, mutex, wait.

**SQL**
The Structured Query Language that is standard for performing database operations. Often divided into the categories **DDL**, **DML**, and **queries**. MySQL includes some additional statement categories such as replication. See Chapter 9, Language Structure for the building blocks of SQL syntax, Chapter 11, Data Types for the data types to use for MySQL table columns, Chapter 13, SQL Statements for details about SQL statements and their associated categories, and Chapter 12, Functions and Operators for standard and MySQL-specific functions to use in queries.
See Also DDL, DML, query, replication.
SSD
Acronym for “solid-state drive”. A type of storage device with different performance characteristics than a traditional hard disk drive (HDD): smaller storage capacity, faster for random reads, no moving parts, and with a number of considerations affecting write performance. Its performance characteristics can influence the throughput of a disk-bound workload.
See Also disk-bound, HDD.

startup
The process of starting the MySQL server. Typically done by one of the programs listed in Section 4.3, “Server and Server-Startup Programs”. The opposite of shutdown.
See Also shutdown.

statement-based replication
A form of replication where SQL statements are sent from the master server and replayed on the slave server. It requires some care with the setting for the innodb_autoinc_lock_mode option, to avoid potential timing problems with auto-increment locking.
See Also auto-increment locking, innodb_autoinc_lock_mode, master server, replication, row-based replication, slave server.

statistics
Estimated values relating to each InnoDB table and index, used to construct an efficient query execution plan. The main values are the cardinality (number of distinct values) and the total number of table rows or index entries. The statistics for the table represent the data in its primary key index. The statistics for a secondary index represent the rows covered by that index.

The values are estimated rather than counted precisely because at any moment, different transactions can be inserting and deleting rows from the same table. To keep the values from being recalculated frequently, you can enable persistent statistics, where the values are stored in InnoDB system tables, and refreshed only when you issue an ANALYZE TABLE statement.

You can control how NULL values are treated when calculating statistics through the innodb_stats_method configuration option.

Other types of statistics are available for database objects and database activity through the INFORMATION_SCHEMA and PERFORMANCE_SCHEMA tables.
See Also cardinality, index, INFORMATION_SCHEMA, NULL, Performance Schema, persistent statistics, primary key, query execution plan, secondary index, table, transaction.

stemming
The ability to search for different variations of a word based on a common root word, such as singular and plural, or past, present, and future verb tense. This feature is currently supported in MyISAM full-text search feature but not in FULLTEXT indexes for InnoDB tables.
See Also full-text search, FULLTEXT index.

stopword
In a FULLTEXT index, a word that is considered common or trivial enough that it is omitted from the search index and ignored in search queries. Different configuration settings control stopword processing for InnoDB and MyISAM tables. See Section 12.9.4, “Full-Text Stopwords” for details.
See Also FULLTEXT index, search index.

storage engine
A component of the MySQL database that performs the low-level work of storing, updating, and querying data. In MySQL 5.5 and higher, InnoDB is the default storage engine for new tables, superceding MyISAM. Different storage engines are designed with different tradeoffs between factors such as memory usage versus disk usage, read speed versus write speed, and speed versus robustness. Each storage engine manages specific tables, so we refer to InnoDB tables, MyISAM tables, and so on.

The MySQL Enterprise Backup product is optimized for backing up InnoDB tables. It can also back up tables handled by MyISAM and other storage engines.
See Also InnoDB, MySQL Enterprise Backup, table type.
stored generated column
A column whose values are computed from an expression included in the column definition. Column values are evaluated and stored when rows are inserted or updated. A stored generated column requires storage space and can be indexed.

Contrast with virtual generated column.
See Also base column, generated column, virtual generated column.

stored object
A stored program or view.

stored program
A stored routine (procedure or function), trigger, or Event Scheduler event.

stored routine
A stored procedure or function.

strict mode
The general name for the setting controlled by the innodb_strict_mode option. Turning on this setting causes certain conditions that are normally treated as warnings, to be considered errors. For example, certain invalid combinations of options related to file format and row format, that normally produce a warning and continue with default values, now cause the CREATE TABLE operation to fail. innodb_strict_mode is enabled by default in MySQL 5.7.

MySQL also has something called strict mode. See Section 5.1.11, “Server SQL Modes”.
See Also file format, innodb_strict_mode, row format.

sublist
Within the list structure that represents the buffer pool, pages that are relatively old and relatively new are represented by different portions of the list. A set of parameters control the size of these portions and the dividing point between the new and old pages.
See Also buffer pool, eviction, list, LRU.

supremum record
A pseudo-record in an index, representing the gap above the largest value in that index. If a transaction has a statement such as SELECT ... FROM ... WHERE col > 10 FOR UPDATE; and the largest value in the column is 20, it is a lock on the supremum record that prevents other transactions from inserting even larger values such as 50, 100, and so on.
See Also gap, infimum record, pseudo-record.

surrogate key
Synonym name for synthetic key.
See Also synthetic key.

synthetic key
An indexed column, typically a primary key, where the values are assigned arbitrarily. Often done using an auto-increment column. By treating the value as completely arbitrary, you can avoid overly restrictive rules and faulty application assumptions. For example, a numeric sequence representing employee numbers might have a gap if an employee was approved for hiring but never actually joined. Or employee number 100 might have a later hiring date than employee number 500, if they left the company and later rejoined. Numeric values also produce shorter values of predictable length. For example, storing numeric codes meaning “Road”, “Boulevard”, “Expressway”, and so on is more space-efficient than repeating those strings over and over.

Also known as a surrogate key. Contrast with natural key.
See Also auto-increment, natural key, primary key, surrogate key.

system tablespace
One or more data files (ibdata files) containing the metadata for InnoDB-related objects, and the storage areas for the change buffer, and the doublewrite buffer. It may also contain table and index data.
for InnoDB tables if tables were created in the system tablespace instead of file-per-table or general

tablespaces. The data and metadata in the system tablespace apply to all databases in a MySQL instance.

Prior to MySQL 5.6.7, the default was to keep all InnoDB tables and indexes inside the system tablespace,

	often causing this file to become very large. Because the system tablespace never shrinks, storage problems
could arise if large amounts of temporary data were loaded and then deleted. In MySQL 8.0, the default is

file-per-table mode, where each table and its associated indexes are stored in a separate .ibd file. This
default makes it easier to use InnoDB features that rely on DYNAMIC and COMPRESSED row formats, such as
table compression, efficient storage of off-page columns, and large index key prefixes.

Keeping all table data in the system tablespace or in separate .ibd files has implications for storage
management in general. The MySQL Enterprise Backup product might back up a small set of large files, or

many smaller files. On systems with thousands of tables, the file system operations to process thousands of

.ibd files can cause bottlenecks.

InnoDB introduced general tablespaces in MySQL 5.7.6, which are also represented by .ibd files. General
tablespaces are shared tablespaces created using CREATE TABLESPACE syntax. They can be created
outside of the data directory, are capable of holding multiple tables, and support tables of all row formats.
See Also change buffer, compression, data dictionary, database, doublewrite buffer, dynamic row format, file-

per-table, general tablespace, .ibd file, ibdata file, innodb_file_per_table, instance, MySQL Enterprise Backup,
off-page column, tablespace, undo log.

T

table

Each MySQL table is associated with a particular storage engine. InnoDB tables have particular physical

and logical characteristics that affect performance, scalability, backup, administration, and application
development.

In terms of file storage, an InnoDB table belongs to one of the following tablespace types:

• The shared InnoDB system tablespace, which is comprised of one or more ibdata files.

• A file-per-table tablespace, comprised of an individual .ibd file.

• A shared general tablespace, comprised of an individual .ibd file. General tablespaces were introduced
in MySQL 5.7.6.

.ibd data files contain both table and index data.

InnoDB tables created in file-per-table tablespaces can use DYNAMIC or COMPRESSED row format. These
row formats enable InnoDB features such as compression, efficient storage of off-page columns, and large
index key prefixes. General tablespaces support all row formats.

The system tablespace supports tables that use REDUNDANT, COMPACT, and DYNAMIC row formats.
System tablespace support for the DYNAMIC row format was added in MySQL 5.7.6.

The rows of an InnoDB table are organized into an index structure known as the clustered index, with
entries sorted based on the primary key columns of the table. Data access is optimized for queries that
filter and sort on the primary key columns, and each index contains a copy of the associated primary key
columns for each entry. Modifying values for any of the primary key columns is an expensive operation. Thus
an important aspect of InnoDB table design is choosing a primary key with columns that are used in the most
important queries, and keeping the primary key short, with rarely changing values.
See Also backup, clustered index, compact row format, compressed row format, compression, dynamic row
format, Fast Index Creation, file-per-table, .ibd file, index, off-page column, primary key, redundant row format,
row, system tablespace, tablespace.

table lock

A lock that prevents any other transaction from accessing a table. InnoDB makes considerable effort to
make such locks unnecessary, by using techniques such as online DDL, row locks and consistent reads
for processing DML statements and queries. You can create such a lock through SQL using the `LOCK TABLE` statement; one of the steps in migrating from other database systems or MySQL storage engines is to remove such statements wherever practical. See Also consistent read, DML, lock, locking, online DDL, query, row lock, table, transaction.

table scan
- See full table scan.

table statistics
- See statistics.

table type
- Obsolete synonym for storage engine. We refer to InnoDB tables, MyISAM tables, and so on. See Also InnoDB, storage engine.

tablespace
- A data file that can hold data for one or more InnoDB tables and associated indexes.

  The system tablespace contains the InnoDB data dictionary, and prior to MySQL 5.6 holds all other InnoDB tables by default.

  The `innodb_file_per_table` option, enabled by default in MySQL 5.6 and higher, allows tables to be created in their own tablespaces. File-per-table tablespaces support features such as efficient storage of off-page columns, table compression, and transportable tablespaces. See Section 15.6.3.2, “File-Per-Table Tablespaces” for details.

  InnoDB introduced general tablespaces in MySQL 5.7.6. General tablespaces are shared tablespaces created using `CREATE TABLESPACE` syntax. They can be created outside of the MySQL data directory, are capable of holding multiple tables, and support tables of all row formats.

  MySQL NDB Cluster also groups its tables into tablespaces. See Section 22.5.13.1, “NDB Cluster Disk Data Objects” for details.

  See Also compressed row format, data dictionary, data files, file-per-table, general tablespace, index, innodb_file_per_table, system tablespace, table.

temporary table
- A table whose data does not need to be truly permanent. For example, temporary tables might be used as storage areas for intermediate results in complicated calculations or transformations; this intermediate data would not need to be recovered after a crash. Database products can take various shortcuts to improve the performance of operations on temporary tables, by being less scrupulous about writing data to disk and other measures to protect the data across restarts.

  Sometimes, the data itself is removed automatically at a set time, such as when the transaction ends or when the session ends. With some database products, the table itself is removed automatically too. See Also table.

temporary tablespace
- InnoDB uses two types of temporary tablespace. Session temporary tablespaces store user-created temporary tables and internal temporary tables created by the optimizer. The global temporary tablespace stores rollback segments for changes made to user-created temporary tables. See Also global temporary tablespace, session temporary tablespace, temporary table.

text collection
- The set of columns included in a FULLTEXT index. See Also FULLTEXT index.

thread
- A unit of processing that is typically more lightweight than a process, allowing for greater concurrency. See Also concurrency, master thread, process, Pthreads.
torn page
An error condition that can occur due to a combination of I/O device configuration and hardware failure. If data is written out in chunks smaller than the InnoDB page size (by default, 16KB), a hardware failure while writing could result in only part of a page being stored to disk. The InnoDB doublewrite buffer guards against this possibility. See Also doublewrite buffer.

TPS
Acronym for “transactions per second”, a unit of measurement sometimes used in benchmarks. Its value depends on the workload represented by a particular benchmark test, combined with factors that you control such as the hardware capacity and database configuration. See Also transaction, workload.

transaction
Transactions are atomic units of work that can be committed or rolled back. When a transaction makes multiple changes to the database, either all the changes succeed when the transaction is committed, or all the changes are undone when the transaction is rolled back.

Database transactions, as implemented by InnoDB, have properties that are collectively known by the acronym ACID, for atomicity, consistency, isolation, and durability. See Also ACID, commit, isolation level, lock, rollback.

transaction ID
An internal field associated with each row. This field is physically changed by INSERT, UPDATE, and DELETE operations to record which transaction has locked the row. See Also implicit row lock, row, transaction.

transparent page compression
A feature added in MySQL 5.7.8 that permits page-level compression for InnoDB tables that reside in file-per-table tablespaces. Page compression is enabled by specifying the COMPRESSION attribute with CREATE TABLE or ALTER TABLE. For more information, see Section 15.9.2, “InnoDB Page Compression”. See Also file-per-table, hole punching, sparse file.

transportable tablespace
A feature that allows a tablespace to be moved from one instance to another. Traditionally, this has not been possible for InnoDB tablespaces because all table data was part of the system tablespace. In MySQL 5.6 and higher, the FLUSH TABLES ... FOR EXPORT syntax prepares an InnoDB table for copying to another server; running ALTER TABLE ... DISCARD TABLESPACE and ALTER TABLE ... IMPORT TABLESPACE on the other server brings the copied data file into the other instance. A separate .cfg file, copied along with the .ibd file, is used to update the table metadata (for example the space ID) as the tablespace is imported. See Section 15.6.1.3, “Importing InnoDB Tables” for usage information. See Also .cfg file, .ibd file, space ID, system tablespace, tablespace.

troubleshooting
The process of determining the source of a problem. Some of the resources for troubleshooting MySQL problems include:

- Section 2.10.2.1, “Troubleshooting Problems Starting the MySQL Server”
- Section 6.2.21, “Troubleshooting Problems Connecting to MySQL”
- Section B.4.3.2, “How to Reset the Root Password”
- Section B.4.2, “Common Errors When Using MySQL Programs”
- Section 15.21, “InnoDB Troubleshooting”.

truncate
A DDL operation that removes the entire contents of a table, while leaving the table and related indexes intact. Contrast with drop. Although conceptually it has the same result as a DELETE statement with no WHERE clause, it operates differently behind the scenes: InnoDB creates a new empty table, drops the old
table, then renames the new table to take the place of the old one. Because this is a DDL operation, it cannot be rolled back.

If the table being truncated contains foreign keys that reference another table, the truncation operation uses a slower method of operation, deleting one row at a time so that corresponding rows in the referenced table can be deleted as needed by any ON DELETE CASCADE clause. (MySQL 5.5 and higher do not allow this slower form of truncate, and return an error instead if foreign keys are involved. In this case, use a DELETE statement instead.

See Also DDL, drop, foreign key, rollback.

tuple
A technical term designating an ordered set of elements. It is an abstract notion, used in formal discussions of database theory. In the database field, tuples are usually represented by the columns of a table row. They could also be represented by the result sets of queries, for example, queries that retrieved only some columns of a table, or columns from joined tables.

See Also cursor.

two-phase commit
An operation that is part of a distributed transaction, under the XA specification. (Sometimes abbreviated as 2PC.) When multiple databases participate in the transaction, either all databases commit the changes, or all databases roll back the changes.

See Also commit, rollback, transaction, XA.

undo
Data that is maintained throughout the life of a transaction, recording all changes so that they can be undone in case of a rollback operation. It is stored in undo logs either within the system tablespace (in MySQL 5.7 or earlier) or in separate undo tablespaces. As of MySQL 8.0, undo logs reside in undo tablespace by default.

See Also rollback, rollback segment, system tablespace, transaction, undo log, undo space.

undo buffer
See undo log.

undo log
A storage area that holds copies of data modified by active transactions. If another transaction needs to see the original data (as part of a consistent read operation), the unmodified data is retrieved from this storage area.

In MySQL 5.6 and MySQL 5.7, you can use the innodb_undo_tablespaces variable have undo logs reside in undo tablespaces, which can be placed on another storage device such as an SSD. In MySQL 8.0, undo logs reside in two default undo tablespaces that are created when MySQL is initialized, and additional undo tablespaces can be created using CREATE UNDO TABLESPACE syntax.

The undo log is split into separate portions, the insert undo buffer and the update undo buffer.

See Also consistent read, rollback segment, SSD, system tablespace, transaction, undo space.

undo log segment
A collection of undo logs. Undo log segments exists within rollback segments. An undo log segment might contain undo logs from multiple transactions. An undo log segment can only be used by one transaction at a time but can be reused after it is released at transaction commit or rollback. May also be referred to as an “undo segment”.

See Also commit, rollback, rollback segment, undo log.

undo space
An undo space contains undo logs. Undo logs exist within undo log segments, which are contained within rollback segments. Rollback segments have traditionally resided in the system tablespace. As of MySQL 5.6, rollback segments can reside in undo tablespace. In MySQL 5.6 and MySQL 5.7, the number of
undo tablespaces is controlled by the `innodb_undo_tablespaces` configuration option. In MySQL 8.0, two default undo tablespaces are created when the MySQL instance is initialized, and additional undo tablespaces can be created using `CREATE UNDO TABLESPACE` syntax.

For more information, see Section 15.6.3.4, “Undo Tablespaces”. See Also rollback segment, system tablespace, undo log, undo log segment.

unique constraint
A kind of constraint that asserts that a column cannot contain any duplicate values. In terms of relational algebra, it is used to specify 1-to-1 relationships. For efficiency in checking whether a value can be inserted (that is, the value does not already exist in the column), a unique constraint is supported by an underlying unique index.
See Also constraint, relational, unique index.

unique index
An index on a column or set of columns that have a unique constraint. Because the index is known not to contain any duplicate values, certain kinds of lookups and count operations are more efficient than in the normal kind of index. Most of the lookups against this type of index are simply to determine if a certain value exists or not. The number of values in the index is the same as the number of rows in the table, or at least the number of rows with non-null values for the associated columns.

Change buffering optimization does not apply to unique indexes. As a workaround, you can temporarily set `unique_checks=0` while doing a bulk data load into an InnoDB table.
See Also cardinality, change buffering, unique constraint, unique key.

unique key
The set of columns (one or more) comprising a unique index. When you can define a WHERE condition that matches exactly one row, and the query can use an associated unique index, the lookup and error handling can be performed very efficiently.
See Also cardinality, unique constraint, unique index.

variable-length type
A data type of variable length. `VARCHAR`, `VARBINARY`, and `BLOB` and `TEXT` types are variable-length types.

InnoDB treats fixed-length fields greater than or equal to 768 bytes in length as variable-length fields, which can be stored off-page. For example, a `CHAR(255)` column can exceed 768 bytes if the maximum byte length of the character set is greater than 3, as it is with `utf8mb4`.
See Also off-page column, overflow page.

victim
The transaction that is automatically chosen to be rolled back when a deadlock is detected. InnoDB rolls back the transaction that has updated the fewest rows.

Deadlock detection can be disabled using the `innodb_deadlock_detect` configuration option.
See Also deadlock, deadlock detection, `innodb_lock_wait_timeout`, transaction.

view
A stored query that when invoked produces a result set. A view acts as a virtual table.

virtual column
See virtual generated column.

virtual generated column
A column whose values are computed from an expression included in the column definition. Column values are not stored, but are evaluated when rows are read, immediately after any BEFORE triggers. A virtual generated column takes no storage. InnoDB supports secondary indexes on virtual generated columns.

Contrast with stored generated column.
See Also base column, generated column, stored generated column.

virtual index
A virtual index is a secondary index on one or more virtual generated columns or on a combination of virtual generated columns and regular columns or stored generated columns. For more information, see Section 13.1.20.10, “Secondary Indexes and Generated Columns”.
See Also secondary index, stored generated column, virtual generated column.

W
wait
When an operation, such as acquiring a lock, mutex, or latch, cannot be completed immediately, InnoDB pauses and tries again. The mechanism for pausing is elaborate enough that this operation has its own name, the wait. Individual threads are paused using a combination of internal InnoDB scheduling, operating system wait() calls, and short-duration spin loops.

On systems with heavy load and many transactions, you might use the output from the SHOW INNODB STATUS command or Performance Schema to determine whether threads are spending too much time waiting, and if so, how you can improve concurrency.
See Also concurrency, latch, lock, mutex, Performance Schema, spin.

warm backup
A backup taken while the database is running, but that restricts some database operations during the backup process. For example, tables might become read-only. For busy applications and websites, you might prefer a hot backup.
See Also backup, cold backup, hot backup.

warm up
To run a system under a typical workload for some time after startup, so that the buffer pool and other memory regions are filled as they would be under normal conditions. This process happens naturally over time when a MySQL server is restarted or subjected to a new workload.

Typically, you run a workload for some time to warm up the buffer pool before running performance tests, to ensure consistent results across multiple runs; otherwise, performance might be artificially low during the first run.

In MySQL 5.6, you can speed up the warmup process by enabling the innodb_buffer_pool_dump_at_shutdown and innodb_buffer_pool_load_at_startup configuration options, to bring the contents of the buffer pool back into memory after a restart. These options are enabled by default in MySQL 5.7. See Section 15.8.3.6, “Saving and Restoring the Buffer Pool State”.
See Also buffer pool, workload.

workload
The combination and volume of SQL and other database operations, performed by a database application during typical or peak usage. You can subject the database to a particular workload during performance testing to identify bottlenecks, or during capacity planning.
See Also bottleneck, CPU-bound, disk-bound, SQL.

write combining
An optimization technique that reduces write operations when dirty pages are flushed from the InnoDB buffer pool. If a row in a page is updated multiple times, or multiple rows on the same page are updated, all of those changes are stored to the data files in a single write operation rather than one write for each change.
See Also buffer pool, dirty page, flush.

X
XA
A standard interface for coordinating distributed transactions, allowing multiple databases to participate in a transaction while maintaining ACID compliance. For full details, see Section 13.3.8, “XA Transactions”.

XA Distributed Transaction support is enabled by default.
See Also ACID, binary log, commit, transaction, two-phase commit.

**young**

A characteristic of a page in the InnoDB buffer pool meaning it has been accessed recently, and so is moved within the buffer pool data structure, so that it will not be flushed soon by the LRU algorithm. This term is used in some INFORMATION_SCHEMA column names of tables related to the buffer pool.

See Also buffer pool, flush, INFORMATION_SCHEMA, LRU, page.
